Rubber Hose Stops

Also known as bumper stops or ball stops, these two-piece rubber hose stops prevent your hose from completely rewinding onto the reel. To use, simply position the stop anywhere along your hose and secure with two stainless steel screws (included). Hose not included.

To Order: Please specify color: black, red, or yellow.

For Hose ID	For Hose OD	Stop Size (A)	Stop Size (B)		Each

For information about pipe size, see pages 2-3.

Dispensing Hose Nozzles

In addition to having an on/off mechanism, these nozzles allow you to control the flow while dispensing liquids. All have a threaded female NPT connection, except Style H has a hose barb connection.

Nozzles with ***automatic shutoff*** have a three-position hold-open clip, so you can dispense without holding the trigger. All will shut off automatically when the tank is full; they will also shut off if the nozzle falls from the tank, except Style B.

Nozzles with ***manual shutoff*** will stop the flow when you release the trigger or close the lever. *Note:* Do not leave nozzles unattended when in use.

Style A— Also known as service-station-style nozzles, these nozzles have a red scuff guard. UL listed. An optional splash guard is sold separately below; splash guard is red.

Styles B and ***C—*** Commonly called truck-stop nozzles, these nozzles offer high-volume flow. UL listed. *Style B* has a black scuff guard. *Style C* has a green scuff guard and splash guard.

Style E— These nozzles are UL listed.

Styles G and ***H—*** Made from black polypropylene. *Style G* are the highest-volume flow nozzles we offer; turn flow on and off by moving the lever.

Angled Fuel Hose Swivels

- Maximum Pressure @ 72°F: 50 psi
- Temperature Range: –20° to +120°F
- Use with fuel and petroleum hose

Relieve tension on hose and nozzles with these swivels. They allow smooth 360° rotation at the male connection and at the 45° elbow to prevent twisting, kinking, and premature hose wear. Body is aluminum with a Buna-N (nitrile) seal and zinc inlet and outlet adapters. Use with leaded and unleaded gasoline, as well as with diesel fuel. UL listed.

Pipe Size, NPT Male	Pipe Size, NPT Female	O'all Lg.		Each
¾″	¾″	4⅛″	5538K52	$37.95
1″	1″	4¾″	5538K54	71.22

Large-Diameter Liquid-Handling Hose Swivels

- Maximum Pressure @ 72°F: 150 psi
- Temperature Range: –65° to +250°F
- Hose: Use Buna-N (nitrile), EPDM, and polyethylene
- Clamps: For swivel barbs, use low-profile clamps (see page 283)

Also known as live swivels and inline swivels, these hose swivels rotate 360° to prevent larger-sized hose from twisting, kinking, and wearing prematurely. Use with water, coolants, mineral oil, glycol, hydraulic oil, gasoline, and petroleum products.

Both ***anodized aluminum*** and ***chrome-plated brass*** have good corrosion resistance and chemical resistance.

About Pump Performance

Max. Flow @ Feet of Head—Flow rate in gallons per minute at a particular pressure. Generally, flow decreases as the feet of head increases.

In the example at left, when pumping at 10 feet of head, the pump will output 30 gallons per minute. But at 25 feet of head, it can only pump 10 gallons per minute.

Max. Feet of Head—Also known as shutoff, this is the pressure at which flow is zero.

Note: To convert feet of head to psi, multiply by 0.43.

Calculating Your Feet of Head

To determine how many feet of head you'll be pumping and how strong a pump you'll need, there are a couple factors to consider.

1.) Pressure loss due to friction between the fluid and pipe. The chart at right shows the feet of head lost due to friction per 100 feet of PVC pipe (for metal pipe, approximately double the head loss shown for PVC pipe).

2.) The height to which you'll be pumping.

Note: Fittings and valves can add up to 3% additional feet of head, depending on the number of fittings and valves in your system.

Friction Loss per 100 Feet of PVC Pipe in Feet of Head

Flow Rate, gpm	Pipe Size ½″	¾″	1″	1¼″	1½″	2″	3″
5	23.44	5.73	1.72	0.44	0.22	0.07	0.02
10	82.02	20.04	6.02	1.55	0.72	0.21	0.03
15	____	42.46	12.77	3.28	1.53	0.45	0.07
20	____	72.34	21.75	5.59	2.61	0.76	0.11
25	____	____	32.88	8.45	3.95	1.15	0.17
50	____	____	____	30.51	14.25	4.16	0.6

For example, let's say you need a flow rate of 20 gpm and your system consists of ¾″ PVC pipe that runs 10 feet vertically and 40 feet horizontally for a total of 50 feet of pipe.

From the chart above, 100 ft. of ¾″ PVC pipe at 20 gpm results in a loss of about 72 feet of head. You only have 50 ft. of pipe so cut that value in half—you'll lose about 36 feet of head to friction. Add that to the 10 vertical feet of pipe, which equates exactly to 10 feet of head, for a total of 46 feet of head. In other words, you must choose a pump that will move at least 20 gpm at 46 feet of head.

Pumping Flammable Liquids

Caution: When using any pump with flammable liquids, you should always bond and ground your application for static control. For more information about bonding and grounding, as well as bonding and grounding equipment, see pages 932-933 and Sections 1910.106 and 1910.107 of the Federal OSHA Code.

About Sump, Water-Removal, Condensate, and Submersible Pumps

Sump pumps drain accumulated water from a sump pit.

Be sure to choose the right capacity pump for your application. A pump that doesn't have enough flow won't be able to keep up with water flowing into your sump pit. But a pump that is too powerful and has too high a flow rate will start and stop too fast. Both situations can cause premature pump failure.

Water-removal pumps remove water from a flooded, open area. Generally, they are not used with a sump pit.

Condensate pumps typically have a tank in which condensate accumulates from HVAC or refrigeration systems.

Submersible pumps are compact and have low horsepower motors; ideal for circulating liquids in small tanks and baths.

Sump Pumps for Water

Sump Pumps for Water

Tethered Float Switch

Integrated Float Switch

Pressure-Diaphragm Switch

Transfer water from underground sumps, loading docks, and cooling towers. Use only with debris-free water. Not rated for use with solids. All pumps have a screened intake, a single-phase motor with thermal overload protection, a 1½″ NPT female discharge connection (unless noted), and a power cord with a three-prong plug, unless noted.

Bottom-inlet pumps draw water in from the bottom of the pit. They have a continuous-duty motor and require a minimum 18″ Dia.×22″ Dp. sump. Temp. range is 32° to 120° F. UL listed and CSA certified, unless noted.

Plug-In Controlled—Pumps do not have a switch; simply plug in to turn on. They must be submerged in water at all times. Do not run dry.

Tethered Float-Switch Controlled—"Piggyback" switch is not wired to the pump; it has its own power cord. Switch is easy to replace so it's ideal for troubleshooting.

Integrated Float-Switch Controlled—Float switch is part of the pump for a smaller footprint than tethered float-switch pumps.

Pressure-Diaphragm Switch Controlled—Compact with no external float that can catch on sump walls.

Side-inlet pumps have a screened inlet that is 2″ from the bottom of the pit to avoid picking up dirt and debris. Motor is continuous duty and requires a minimum 11″ Dia.×12″ Dp. sump. Temperature range is 40° to 120° F. CSA certified.

♣ CSA certified to U.S. and Canadian standards. ▲ Power cord is 20-ft. long. ■ Discharge connection is 1¼″ NPT female.
● Power cord does not have a plug. Not UL listed or CSA certified. ★ Power cord is 8-ft. long.

For information about pumps and pump performance, see page 328.

High-Flow Sump Pumps for Water

A large, high-horsepower motor gives you more flow at the same feet of head than our other pumps. These also have a top discharge so liquid flows through the pump, providing extra cooling for the motor and extending pump life. They're powered by a tethered float switch. This "piggyback" switch is not wired to the pump; it has its own power cord so it's easy to replace and ideal for troubleshooting. Motors are intermittent duty and single phase. They have thermal overload protection and a power cord with three-prong plug. Pumps have an ABS-thermoplastic housing with an intake screen and built-in check valve. Discharge connection is an unthreaded universal adapter for 1¼″ and 1½″ pipe. Not rated for use with solids. Overall size is 14⅞″ Ht.×5¹³⁄₁₆″ Wd.×5⅜″ Dp. They require a minimum 14″ Dia.×14″ Dp. sump. Temperature range is 32° to 77° F. UL listed and CSA certified.

Max. Flow, gpm @ 5 ft. of Head	@ 10 ft. of Head	@ 15 ft. of Head	@ 20 ft. of Head	Max. ft. of Head	Turn-On Level	Turn-Off Level	hp	VAC @ 60 Hz	Amps	10-ft. Power Cord	Each	20-ft. Power Cord	Each

Energy-Efficient Sump Pumps for Water

A heavy duty motor with sealed bearings gives you higher efficiency than the Sump Pumps for Water on the previous page—they use fewer amps to achieve a similar flow rate. A Type 304 stainless steel housing dissipates heat from the motor to extend its life. Motor is continuous duty and single phase. It has thermal overload protection and a power cord with three-prong plug. Discharge connection is 1½″ NPT female. Maximum solid diameter is ⅜″. Temperature range is 33° to 104° F. UL listed and CSA certified.

Plug-In Controlled— Pump does not have a switch; simply plug in to turn on. It must be submerged in water at all times. Do not run dry.

Tethered Float-Switch Controlled— "Piggyback" switch is not wired to the pump; it has its own power cord. Switch is easy to replace so it's ideal for troubleshooting.

Integrated Float-Switch Controlled— Float switch is part of the pump for a smaller footprint than tethered float-switch pumps.

Easy-Maintenance High-Temperature Sump Pumps for Water

Unlike the sump pumps above, you can replace these motors, making pump maintenance a snap. And because the motor is mounted on a pedestal and never comes in contact with water, these pumps can handle high-temperature water. They have thermal overload protection and are controlled by an integrated float switch that is part of the pump for a smaller footprint than tethered float switches.

With Totally Enclosed Fan-Cooled Motor (TEFC)— Ideal for dusty environments. Motor is continuous duty, single phase, and has a 10-ft. power cord with three-prong plug. Discharge connection is 1½″ NPT female, unless noted. Maximum solid diameter is ¾″. Overall size is 39″ Ht.×10¹³⁄₁₆″ Wd.×11″ Dp., unless noted. Pumps require a minimum 18″ Dia.×24″ Dp. sump. Temperature range is 40° to 200° F. UL listed. *Repair kits* include float, float rod, and switch.

With Hazardous-Location Motor— NEMA C-face motor is UL listed and CSA certified for Class I, Group D and Class II, Groups F and G hazardous locations. Motor is continuous duty, single phase, and has a ½″ NPT female conduit connection and screw terminals. Discharge connection is 1¼″ NPT female. Max. solid diameter is ¼″. Overall size is 48″ Ht.×15″ Wd.×15″ Dp. Pumps require a minimum 17″ Dia.×25″ Dp. sump. Temp. range is 33° to 170° F for 4323K41 and 33° to 390° F for 4323K43.

Extended-Life Sump Pumps for Water

A titanium housing with a rugged motor and bearings keep these pumps working in the most abusive environments. They have titanium, Buna-N, polypropylene, and ABS-thermoplastic wetted parts for pumping salt water, barium hydroxide, lithium chloride, magnesium chloride, potassium nitrite, and any other fluid compatible with those wetted parts. Motor is continuous duty and single phase. It has thermal overload protection and a power cord with three-prong plug. Discharge connection is 2″ NPT male. Maximum solid diameter is ²⁵⁄₆₄″. Pumps require a minimum 15″ Dia.×26″ Dp. sump. Temperature range is 34° to 140° F.

Plug-In Controlled— Does not have a switch; plug in to turn on. Must be submerged in water at all times. Do not run dry.

Direct-Wire Tethered Float-Switch Controlled— Pump has two floats—one turns the pump on and the other turns it off. Float switch is directly wired to the pump.

Sump Pumps for Water with Solids

High Head

Also known as effluent pumps, these have a large impeller, intake, and internal flow path that can handle solids up to 3/4″ dia., unless noted. They also have an epoxy-coated, heavy duty cast iron housing for impact resistance. Motor is continuous duty and single phase. It has thermal overload protection and a power cord with three-prong plug, unless noted.

Plug-In Controlled—Pumps do not have a switch; simply plug them in to turn them on. They must be submerged in water at all times. Do not run dry. *Tethered Float-Switch Controlled*—Pumps are ideal for troubleshooting. "Piggyback" switch is not wired to the pump; it has its own power cord so it's easy to replace. *Integrated Float-Switch Controlled*—Pumps have a smaller footprint than tethered float-switch pumps; float switch is part of the pump. *Direct-Wire Tethered Float-Switch Controlled*—Pumps have a float switch that is directly wired to the pump.

Standard pumps have a 1 1/2″ NPT female discharge connection and a temp. range of 32° to 120° F. UL listed and CSA certified, unless noted. ***High temperature*** pumps have a temp. range of 32° to 200° F. Discharge connection is 1 1/2″ NPT female. CSA certified. ***High-head*** pumps move water to greater heights than standard and high-temperature pumps. They have a 2″ NPT female discharge connection (unless noted) and a temperature range of 32° to 120° F. UL listed and CSA certified, unless noted.

High-Flow Sump Pumps for Water with Solids

Pump with Horizontal Discharge Connection

At the same feet of head as the pumps above, these will give you higher flow rates while still accepting solids up to 1 3/8″ diameter. They have a Type 304 stainless steel housing for high durability. All include a tethered float switch with a turn-on level of 20″ and a turn-off level of 12″. This switch is not wired to the pump. It has its own power cord without a plug, so it's easy to replace and ideal for troubleshooting. Motor is intermittent duty (up to 20 starts per hour or once every 3 minutes) and single phase. It has thermal overload protection and a power cord without a plug. All are CSA certified.

Pumps with a ***vertical discharge connection*** have a 1 1/2″ NPT female connection and require a minimum 21 1/2″ Dia.× 23″ Dp. sump. Temperature range is 32° to 131° F. UL listed. Pumps with a ***horizontal discharge connection*** have a 2″ NPT male connection and require a minimum 22″ Dia.×24″ Dp. sump. Temperature range is 32° to 104° F.

Sump Pump Switches and Accessories

Tethered Float Switch

Suction Strainer

NPT×Socket Adapter

Tethered Float Switches—Use these "piggyback" switches as a replacement, or turn your plug-in controlled pump into a float-switch controlled pump. Housing is polypropylene. Use with 1/2-hp and smaller motors. Rated for 13 amps. Clamp is 300 series stainless steel and adjusts from 1″ to 3″ dia. Float diameter is 3″. Includes a 15-ft. cord with three-prong plug. Contacts are open until electrically energized (normally open). Maximum temperature is 140° F.

115 VAC ..... **5142K68** **Each** $36.00
230 VAC ..... **5142K72** **Each** $68.00

Basin—Keep dirt away from your sump pump by placing it inside this basin. It measures 18″ Dia.×30″ Dp. Max. temp. is 130° F.

5142K11 ..... **Each** $228.67

Tethered Float Switch with Backup—Make sure your pump turns on when you need it. This switch has two floats for built-in redundancy; if one fails, the second kicks in. Floats are enclosed in a mounting cage to prevent them from catching on sump walls. Housing is ABS thermoplastic. Rated for 12 amps at 115 VAC. Maximum temperature is 140° F.

2506K15 ..... **Each** $68.33

Suction Strainer—An unthreaded SBR (styrene-butadiene rubber) fitting on this polypropylene strainer connects it to 3/4″ pipe or garden hose. Maximum temperature is 120° F.

5142K81 ..... **Each** $14.47

NPT×Socket Adapter—1 1/4″ NPT male×1 1/2″ socket connects a 1 1/4″ NPT female discharge to 1 1/2″ pipe. Made of schedule 40 PVC. Maximum temperature is 140° F.

5142K95 ..... **Each** $2.59

1 1/4″ and 1 1/2″ NPT Drain Hose Kits—Include 24 ft. of flexible polyethylene tubing, a polypropylene male adapter, Type 201 series stainless steel clamp, and ABS check valve with NPT male thread. Temp. not rated.

1 1/4″ NPT Kit ..... **5142K92** **Each** $9.67
1 1/2″ NPT Kit ..... **5142K93** **Each** $12.89

For information about pumps and pump performance, see page 328.

Sump Pumps with Basin

These all-in-one pumps include their own thermoplastic basin and will work in a dug-out pit or at ground level. All have a continuous duty, single-phase motor with thermal overload protection and a power cord with three-prong plug.

For Water—Basin is polypropylene. Maximum solid diameter is 1/4″. Pump housing is epoxy-coated cast iron. Powered by a pressure-diaphragm switch with an 8-ft. power cord. Intake and discharge connections are 1 1/2″ NPT female; basin also has a 2″ NPT female vent. Temperature range is 32° to 125° F.

For Sewage Water—Basin is polyethylene. Maximum solid diameter is 2″. Pump housing is cast iron and has a heavy, structural foam cover. Powered by a tethered float switch. This "piggyback" switch is not wired to the pump; it has its own 10-ft. power cord so it's easy to replace and ideal for troubleshooting. Intake is a 4″ OD unthreaded hole; discharge connection is 2″ NPT female. Temperature range is 33° to 104° F.

Sump Pumps for Sewage Water

With a rugged impeller, large intake, and 2″ NPT female discharge connection (unless noted), these pumps are capable of handling large sewage waste up to 2″ diameter, except 5143K45, which can handle solids up to 2 1/2″ diameter.

Standard pumps have an epoxy-coated cast iron housing. They have a continuous duty, single-phase motor with thermal overload protection and power cord with three-prong plug. They require a minimum 18″ Dia. × 24″ Dp. sump. Temperature range is 32° to 120° F. 42935K14, K24, and K25 are CSA certified to U.S. and Canadian standards.

High-flow pumps have a cast iron housing and an intermittent duty, single-phase motor—limited to 20 starts per hour with a minimum 15 seconds between starts. Motor has thermal overload protection and a power cord without a plug, unless noted. All require a minimum 24″ Dia. × 30″ Dp. sump, unless noted. Temperature range is 33° to 104° F, unless noted. CSA certified.

Plug-In Controlled—Pumps do not have a switch; simply plug in to turn on. They must be submerged in water at all times. Do not run dry.

Tethered Float-Switch Controlled—"Piggyback" switch is not wired to the pump; it has its own power cord. Switch is easy to replace so it's ideal for troubleshooting.

Integrated Float-Switch Controlled—Float switch is part of the pump for a smaller footprint than tethered float-switch pumps.

Direct-Wire Tethered Float-Switch Controlled—Float switch is directly wired to the pump.

■ Power cord has a three-prong plug. ♣ Discharge connection is 3″ NPT female.
♥ Pump requires an 18″ Dia. × 30″ Dp. sump. Temperature range is 33° to 77° F. ★ Temperature range is 33° to 77° F.

High Flow, Plug In

Grinder-Style Sump Pumps for Sewage Water

Type 440C stainless steel blades process sewage and stringy materials into an easy-to-transfer slurry to reduce clogging. Do not use with metal particles or any debris that could damage cutting blades. Housing is epoxy-coated cast iron. Motor has thermal overload protection and a power cord with no plug, unless noted. Discharge connection is 1 1/4″ NPT female. It requires a minimum 24″ Dia. × 36″ Dp. sump.

2758K24 is powered by a tethered float switch. Switch is not wired to the pump; it has its own power cord so it's easy to replace and ideal for troubleshooting. Pump has an intermittent duty (2 hours max. on; 1 hour min. off) motor and a temperature range of 32° to 140° F. UL listed and CSA certified. 2758K28 and ***K29*** have a tethered switch that is part of the pump. Also have an intermittent duty (duty cycle not rated) motor and a maximum temperature of 130° F. Minimum temperature is not rated. UL listed.

♦ Includes a plug.

For information about pumps and pump performance, see page 328.

Ultra-Energy-Efficient Sump Pumps for Sewage Water

Direct-Wire Tethered Float Switch

Compared with similar sump pumps, these require fewer amps for the same amount of flow due to their double seals and sealed, long-life bearings. All have a Type 304L stainless steel housing, a continuous duty motor with 20-ft. power cord, and accept solids up to 2″ diameter. Discharge connection is 2″ NPT female. They require a minimum 24″ Dia.×24″ Dp. sump. Temperature range is 33° to 104° F.

Power-Cord Controlled (No Switch or Plug)— Pumps must be submerged in water at all times. Do not run dry. Motor is three phase and has a power cord with no switch and no plug.

Direct-Wire Tethered Float-Switch Controlled— Operates like "piggyback" float switches, but the switch is directly wired to the pump; it cannot be disconnected or replaced. Motor is single phase. *115 VAC* models have a power cord with three-prong plug. *230 VAC* model has a power cord with no plug.

Pumps for Water Removal

Painted Cast Aluminum

For removing water from flooded open areas, these pumps don't require a sump; they'll take water right off the floor. They have a screened bottom intake and a top discharge connection. All are plug-in controlled—they do not have a switch. Simply plug them in to turn them on. They must be submerged at all times. Do not run dry.

Pumps have an intermittent duty, single-phase motor with thermal overload protection and power cord with three-prong plug. Not rated for use with solids. A ¾″ garden hose thread (GHT) adapter is included. Temp. range is 32° to 120° F, unless noted. CSA certified.

Polypropylene Housing— Housing is glass-filled composite for durability. Discharge connection is 1¼″ NPT female. 3023K41 pumps down to ⅛″ and 99805K12 pumps down to ⅝″.

Polyester Housing— Housing is glass-reinforced composite for durability. Pumps water down to 1″. Discharge connection is 1¼″ NPT male.

Painted Cast Aluminum Housing— More impact resistant than polyester pumps, these pump water down to ⅛″. Discharge connection is 1¼″ NPT female.

Easy-Carry Pumps for Water Removal

Plug In

If you're not sure where your next flood will be, these lightweight pumps have an epoxy-coated cast aluminum housing with a handle, so you can take them wherever they're needed. Motor is single phase with thermal overload protection and a power cord with three-prong plug. It is continuous duty when completely submerged and intermittent duty (3 hours max. on, 30 minutes min. off) if partially submerged. Pumps have a screened bottom intake and are not rated for solids. Discharge connection is 1″ NPT female and includes a ¾″ male garden hose thread (GHT) adapter. Overall size is 7 13/16″ Ht.×6⅛″ Wd.×4 5/16″ Dp., unless noted. Temperature range is 32° to 120° F. UL listed and CSA certified, unless noted.

Plug-In Controlled— Pumps do not have a switch; simply plug in to turn on. They must remain submerged in water at all times. Do not run dry.

Pressure Diaphragm-Switch Controlled— "Piggyback" switch is not wired to the pump; it has its own power cord. Switch is easy to replace, so it's ideal for troubleshooting.

Direct-Wire Tethered Float-Switch Controlled— Float switch is directly wired to the pump; it cannot be replaced.

● UL listed only. ▲ Overall size is 8½″ Ht.×6⅛″ Wd.×4 5/16″ Dp.

Mini Pump with Hose for Water Removal

Remove water down to ⅛″ from small, flooded open spaces. This low-flow pump is furnished ready-to-use with its included suction strainer and 6 feet of garden hose. Housing is glass-reinforced PBT (polybutylene) and has six ¼″ mounting holes on the base (fasteners not included). Pump is plug-in controlled—it does not have a switch. Simply plug it in to turn it on. Do not run dry.

Motor is intermittent duty, single phase with thermal overload protection, and has a 6-ft. power cord with three-prong plug. Intake and discharge connection are ¾″ male garden hose thread (GHT). Not rated for use with solids. Overall size is 4 13/16″ Ht.×4⅜″ Wd.×6 7/16″ Dp. Temperature range is 32° to 77° F. UL listed and CSA certified.

Service Kit— Includes seal, O-ring, impeller, retainer, and wear plate.

Max. Flow, gpm @ 5 ft. of Head	@ 10 ft. of Head	@ 15 ft. of Head	@ 20 ft. of Head	Max. ft. of Head	hp	VAC @ 60 Hz	Amps	Pump	Each	Service Kit	Each

For information about pumps and pump performance, see page 328.

Compact Pumps with Internal Sensor for Water Removal

Also known as bilge pumps, these fit into tight spots and have an internal sensor that checks for water every 2½ minutes. If water is found, the pumps turn on and run until water is removed. They will then continue to check for water every 2½ minutes. Motor is not rated for horsepower; all are single phase. Discharge connection is barbed for 1⅛″ ID tubing, except 3022K11, which is barbed for ¾″ ID tubing. Maximum solid diameter is 1/16″.

12 VDC pumps turn on when 1″ of water is sensed. They have an ABS housing and power cord with no plug. Maximum temperature is 186° F; minimum temperature not rated.

110 VAC pump turns on when ½″ of water is sensed. It has an acetal housing and a power cord with three-prong plug. Includes a garden hose thread (GHT) fitting. UL listed. Temperature range is 33° to 150° F.

110 VAC

110 VAC @ 60 Hz	1	24 ft.	21	12	4	1	21	11″ ×7¾″	3022K24	175.34

High-Flow Pumps for Water Removal

Get higher flow rates at the same pressures as the water removal pumps above. In addition, these have an NPT female top discharge connection so water flows through the pump, providing additional cooling for the motor and extending its life. Maximum solid diameter is ⅜″. All have a Type 304 stainless steel housing, a single-phase motor, and a power cord with three-prong plug, unless noted.

Plug-In Controlled— Do not run dry. *Standard head* pumps are UL listed and CSA certified. They do not have a switch; simply plug in to turn on. Motor is intermittent duty—max. 8 hrs. on when completely submerged and max. 20 starts per hour (once every 3 minutes) when partially submerged, unless noted. For ⅓-hp pumps, temperature range is 32° to 122° F. They'll pump water down to 1″. For ½-hp pumps, temperature range is 32° to 131° F.

High head pumps will remove water down to 1⅜″. They have a continuous-duty motor with a power cord and thermal overload protection. Temperature range is 33° to 120° F.

Tethered Float-Switch Controlled— "Piggyback" switch is not wired to the pump; it has its own power cord. Switch is easy to replace so it's ideal for troubleshooting. These pumps are UL listed and CSA certified. For ⅓-hp pumps, temperature range is 32° to 122° F. For ½-hp pumps, temperature range is 32° to 131° F.

● When partially submerged, max. 10 starts per hour (once every 6 minutes). ♠ Power cord has NEMA 6-15 plug (see pg. 784 for illustration).

Pumps for Sewage-Water Removal

If your water contains solids up to 2″ diameter, then these pumps can move it. Built to resist corrosion, they have a Type 304 stainless steel housing. All are powered by a tethered float switch with a turn-on level of 20″ and a turn-off level of 12″. This switch is not wired to the pump; it has its own power cord without a plug. Switch is easy to replace so it's ideal for trouble-shooting. They also have an intermittent duty (up to 20 starts per hour or every 3 minutes), single-phase motor, a power cord without a plug, and thermal overload protection. All are CSA certified.

Pumps with a ***vertical discharge connection*** have a 2″ NPT female connection and require a 21½″ Dia.×23″ Dp. sump. Temperature range is 32° to 131° F. UL listed.

Pumps with a ***horizontal discharge connection*** have a 2″ NPT male connection and require a 22″ Dia.×24″ Dp. sump. Temperature range is 32° to 104° F.

Mobile Engine-Driven Pumps for Sewage-Water Removal

Water containing silt, slurries, sludge, sewage, and solids up to 2″ diameter is no match for these high-horsepower engine-driven, gas-powered pumps. They have a cast aluminum housing and are mounted on a transport dolly with two 16″ dia. pneumatic rubber wheels for portability. Self-priming up to 20 ft., pumps have a built-in check valve and suction strainer. Engine is Briggs & Stratton Vanguard OHV (overhead valve design) with pull start. 43925K39 is also equipped with a 12 VDC electric start (battery not included; sold separately below). Pumps are not submersible. Intake and discharge connections for both pumps are 4″ NPT female. Temperature range is 40° to 180° F.

Max. Flow, gpm @ 10 ft. of Head	@ 30 ft. of Head	@ 60 ft. of Head	@ 90 ft. of Head	@ 100 ft. of Head	Max. ft. of Head	hp	Fuel Tank Capacity	Overall Size, Ht.×Wd.×Dp.		Each

For information about pumps and pump performance, see page 328.

Engine-Driven Pumps for Water Removal

Lightweight without Frame

High Flow with Frame

Just fill up the gas tank and these engine-driven pumps are ready to pump both clean and dirty water. They're self-priming up to 20 ft. All engines have a pull start. Pumps are not submersible. Intake and discharge connections are 2″ NPT female, unless noted.

Lightweight Pumps without Frame— Polypropylene construction is lightweight and corrosion resistant. They have a Briggs & Stratton four-cycle engine. Temperature range is 40° to 130° F.

High-Flow Pumps with Steel Frame— Higher flow rates than the lightweight pumps above, with a steel frame for protection. Housing is cast iron. They have a Briggs & Stratton four-cycle engine. Temperature range is 40° to 180° F. For even more mobility, use the *wheel kit* (sold separately below).

Sandmaster High-Flow Pump with Steel Frame— Even sand can't stop this pump; it works with freshwater and salt water containing up to 25% sand by volume. Protected by a steel frame. Housing is cast iron and internal parts are high-chromium stainless steel for good wear resistance. It has a Honda GX160 four-cycle engine. Temperature range is 40° to 160° F.

★ Intake and discharge connections are 3″ NPT female.

Water Suction and Discharge Hose Kits

Use these kits with engine-driven water-removal pumps to remove water from open areas (see above and on page 333 for pumps). Kits include a 20-ft. green PVC suction hose with suction strainer and a 50-ft. blue PVC lay-flat discharge hose. All hose has couplings with male × female NPSM (straight) threads. Coupling pipe size and hose ID are the same. Also included are two galvanized steel nipples to convert NPT female pump connections to NPT male connections that fit the NPSM couplings.

Condensate Pumps

A

D

B

E&F

C

Where gravity drainage isn't possible, these pumps collect and remove condensate from evaporative coils on air conditioners and refrigerators. Pumps turn on and off automatically.

Styles A, B, C, D, and ***E*** have a single-phase motor with thermal overload protection. 115 VAC pumps have a three-prong plug; 230 VAC pumps do not have a plug. Temperature range is 32° to 120° F.

Styles B, C, D, and ***E*** include an ABS tank, a 6-ft. power cord, and a 48-volt safety switch that can turn off compatible equipment in case of malfunction. UL listed and CSA certified, unless noted.

A Compact— Mount inside almost any condensate collection tank. Pumps have a cast aluminum housing and a screened intake that can pump down to 1½″. Discharge connection is ¼″ NPT male. ***115 VAC*** pump has a 9-ft. power cord; ***230 VAC*** pump has an 11-ft. power cord.

B Standard— For medium-tonnage air conditioning and refrigeration units. Pumps include a built-in acetal check valve and 20 ft. of 3/8″ ID vinyl tubing. Discharge connection is barbed for 3/8″ ID tubing.

C Low Profile— For use in spaces with low clearance. Pumps include a built-in acetal check valve. Discharge connection is barbed for 3/8″ ID tubing.

D High Capacity— Handle heavy condensate flow. Discharge connection is barbed for 3/8″ ID tubing.

E High Head— Heavy duty pumps move fluid to greater heights. Discharge connection is a 3/8″ OD copper compression fitting.

F High Temperature— Handle high-temperature condensate between 40° and 190° F. They have a safety switch and a single-phase motor with screw terminals. UL and C-UL listed. *1/20-hp* units have a 3/8″ OD check valve and discharge connection. *1/4-* and *1/5-hp* units have a ½″ tube OD check valve and discharge connection.

■ Not CSA certified.

For information about pumps and pump performance, see page 328.

Steam Condensate Pumps with Tank

Collect and return hot condensate to the boiler or boiler feed unit in low-pressure steam heating systems. Pumps are mounted on top of the tank for areas with limited horizontal space. A float switch turns pumps on and off automatically. Tanks are cast iron and have a 2″ NPT female intake connection and 1″ NPT female discharge connection. They also have a ½″ NPT female drain connection. All have an open dripproof (ODP), continuous duty, single-phase motor, and are wired for 115 VAC. They have a junction box with screw terminals. Temperature range is 160° to 200° F. ***Single pumps*** measure 26″ Ht. × 17″ Wd. × 17″ Dp. ***Dual pumps*** handle excessive condensate and provide redundancy; should one pump fail, you won't have to shut down your system to replace it. They measure 26″ Ht. × 20″ Wd. × 18″ Dp. All specifications listed are for each pump, unless noted. ***Repair kit*** includes shaft, oil seal, bushing, thrust washer, spring washer, and snap rings.

Single Pump

Repair Kit (Two are required for Dual Pumps) ..... 4181K91 Each $207.30

✓ Listed value is for first pump; second pump turns on at 7½″ and off at 5¼″.

High-Flow Steam Condensate Pumps with Tank

These large side-mounted pumps give you higher flow than the 4181K pumps above and fit in areas with low vertical clearance. Use in low-pressure steam heating systems to collect and return condensate to the boiler or boiler feed unit. A float switch automatically turns the pumps on when the liquid level is approximately ⅔ of the tank volume; pumps turn off when water level reaches 6″. Tanks are cast iron (except for 20-gal. capacity, which are steel) and have a 2″ NPT female intake connection. Pump discharge connection is 1″ NPT female. All have an open dripproof (ODP), continuous duty, single-phase motor wired for 115 VAC, and a junction box. Temperature range is 35° to 210° F.

Dual pumps handle excessive condensate and provide redundancy; should one pump fail, you won't have to shut down your system to replace the pump. All specifications listed are for each pump.

Seal kit includes one each of a carbon seal with spring, fiber gasket, ceramic seat with vibration ring, and rubber sleeve.

Extended-Life Sealless Submersible Pumps for Water

A magnetic drive means these pumps have no seal to wear out. All are plug-in controlled—they do not have a switch. Simply plug them in to turn them on. Do not run dry. Pumps remove water down to 3″. All have a continuous duty, single-phase motor with a 6-ft. power cord and three-prong plug. Housing is polypropylene. UL recognized for use with water. ***Submersible*** pump has a screened intake that must be underwater at all times. Temperature range is 35° to 160° F. ***Submersible and open-air*** pumps can be submerged but also have an intake connection for open-air applications. Temperature range is 35° to 160° F when pump is fully submerged; in open-air applications, temperature range is 35° to 190° F.

Submersible Pumps for Parts Washers and Machine Oil

Choose a pump for parts washers or one for machine oil. All are plug-in controlled—they do not have a switch. Simply plug them in to turn them on. Do not run dry. All have a continuous duty, single-phase motor with thermal overload protection, unless noted. Housing is aluminum, unless noted. Temp. range is 32° to 120° F.

Pumps for Submerged Use in Parts Washers—For pumping unheated metal-parts cleaning solvents (nonwater-based) that are UL classified PJQU as described in the Gas and Oil Equipment Directory (flash point no lower than 100° F). All have a 6-ft. power cord with no plug. They must be fully submerged at all times.

Pump for Machine Oil—Use with machine and cutting oils up to 9 centipoise when pump is submerged. Use with weak acids and cleaning solvents when pump is not submerged. Pump has a 6-ft. power cord with three-prong plug.

● Motor does not have thermal overload protection. Housing is epoxy-coated aluminum. ▲ Housing is epoxy-coated aluminum.

Submersible Pumps for Water

Ideal for low-flow circulation of water for use with small tanks, cooling tubs, tile saws, air conditioners, water displays, and fountains. Not for use with salt water and flammable liquids. Do not run dry. All have a continuous duty, single-phase motor. All except Style 6 have thermal overload protection and a temperature range of 32° to 120° F. Temperature range for Style 6 is 40° to 120° F. *Style 9* has a removable screen for applications in which pump is submerged.

115 VAC pumps are plug-in controlled. They do not have a switch, but do have a power cord with three-prong plug. Simply plug them in to turn them on. *230 VAC* pumps have a power cord with no plug.

Submersible pumps have a screened intake (unless noted) that must be underwater at all times.

Submersible and open-air pumps can be submerged but also have an intake connection for open-air applications in a pipeline.

Submersible Pumps for Salt Water

Use with freshwater and salt water in both submerged and open-air applications in a pipeline. All are plug-in controlled—they do not have a switch. Simply plug them in to turn them on. Do not run dry. Pumps have an ABS (acrylonitrile butadiene styrene) housing and a continuous duty, single-phase motor with power cord and three-prong plug. Furnished with NPT-to-hose adapters. Temperature range is 35° to 104° F for 1/150- and 1/75-hp pumps; 35° to 122° F for 1/25- and 1/12-hp pumps. All are UL listed, except 99845K28, which is CSA certified.

For information about pump performance, see page 328.

Heavy Duty Metal Drum Pumps

Metal construction and few moving parts give these pumps long service life. Bung connector is included, unless noted. Minimum temperature not rated, unless otherwise indicated.

A ***Handheld with Brass Housing—*** Discharge tube is 36″ long, ½″ ID×¾″ OD. Temperature range is 45° to 140° F. Max. viscosity is not rated. Bung connector is not included.

B&C ***Zinc-Plated Steel Housing—*** Pumps have a removable 360° rotating spout that you can replace with a hose with a ¾″ garden hose thread (GHT) connection.

Style B has a temperature range of 32° to 140° F. Maximum viscosity is 200 centipoise (similar to SAE 30 oil). *Style C* has a temperature range of 0° to 130° F. Maximum viscosity is 250 centipoise (similar to SAE 40 oil).

D ***Steel Housing—*** Maximum temperature is 140° F, and maximum viscosity is 300 centipoise (similar to SAE 40 oil).

E ***Type 316 Stainless Steel Housing—*** Pumps offer exceptional corrosion resistance. Maximum temperature is 140° F, and maximum viscosity is 300 centipoise (similar to SAE 40 oil).

F ***FM-Approved Steel Housing—*** An internal flame arrester and grounding wires make these pumps FM approved for use with flammable and combustible liquids. Maximum temperature is 140° F, and maximum viscosity is 150 centipoise (similar to cough syrup). 4259K23 has a 33 mm unthreaded adapter (fits Rieke Flex Spout) and four threaded screw cap adapters: 1¾″, 2⅛″, 2¼″, and 2⅞″.

Easy-Stroke Metal Drum Pumps

Use the power of leverage to pump with less effort. All pumps have a telescoping intake tube and include a bung connector.

G ***Zinc-Plated Steel Housing—*** Pumps have a removable discharge spout that can be replaced with a hose with a ¾″ garden hose thread (GHT) connection. Temperature range is 60° to 100° F. Maximum viscosity is 319 centipoise (similar to SAE 40 oil). *Note:* For indoor use only. Not for use with water and water-based solutions.

H ***High-Flow with Zinc-Alloy Housing—*** Includes two removable spouts: one curved and one high-angle curved. Spouts can be replaced with a 1″ OD discharge tube (not included). Maximum temperature is 140° F, and maximum viscosity is 4,000 centipoise (similar to honey). Minimum temperature is not rated. *Note:* Not for use with water and water-based solutions.

J ***Dual-Stroke with Aluminum Housing—*** For high-flow output, these pump on both the forward and backward strokes. Lock the lever in place using a padlock (not included) with a ¼″ maximum shackle diameter. Flow is reversible. Temperature range is –15° to +150° F. Maximum viscosity is 400 centipoise (similar to varnish). UL listed.

Pump with *tube, nozzle, and meter* lets you track your flow rate. Meter automatically records up to 99.9 gal./delivery (resettable) and totals up to 99,999.9 gal. (nonresettable).

Metal Rotary Drum Pumps

With an easy-to-rotate handle, all pumps except Style C give you smooth flow for continuous dispensing. All have a cast iron body (unless noted) and include a bung connector.

A ***Pumps with Discharge Tube and Curved Spout—*** Temperature range is 41° to 104° F, and maximum viscosity is 80 centipoise (similar to olive oil).

B ***Pump with Curved Spout—*** Rigid, removable spout can be replaced with 1″ ID discharge tube (not included) for transfer applications. Temperature range is 40° to 160° F, and maximum viscosity is 880 centipoise (similar to glycerin).

C ***Pump with Straight Spout—*** Rigid, removable spout can be replaced with 1″ ID discharge tube (not included) for transfer applications. Dispenses one quart of liquid per each rotation of the handle. Temperature range is –15° to +150° F, and maximum viscosity is 405 centipoise (similar to varnish).

D&E ***Heavy Duty Pumps with Curved Spout—*** Minimum temperature is not rated.

Style D has an aluminum body and includes a discharge tube. Maximum temperature is 180° F, and maximum viscosity is 500 centipoise (similar to caramel).

Style E has a maximum temperature of 300° F and a maximum viscosity of 352 centipoise (similar to SAE 40 oil).

F ***Heavy Duty Pump with Discharge Tube and Nozzle—*** It includes a nozzle and nozzle holder. Maximum temperature is 300° F, and maximum viscosity is 352 centipoise (similar to SAE 40 oil). Minimum temperature is not rated.

G&H ***FM-Approved Pumps—*** Approved for use with Class I and II flammable liquids. Maximum temperature is 300° F, and maximum viscosity is 352 centipoise (similar to SAE 40 oil). Minimum temperature is not rated.

Style G has an antistatic discharge tube, a nozzle hanger, a vacuum breaker to prevent siphoning, a strainer, and a flame-arresting baffle.

Style H has a curved discharge spout, a strainer, a flame-arresting screen and baffle, and a drip pan.

Compact Plastic Drum Pumps

With a small intake tube and handle, these pumps are good for tight spots in low-flow applications. They have few moving parts to wear out so they last longer. Bung connector is included.

J ***Miniature with Polypropylene Housing—*** For small jars, containers, jugs, and carboys with a minimum height of 8″. Discharge spout rotates 360°. Temperature range is 50° to 200° F. Maximum viscosity is 5,000 centipoise (similar to hand lotion).

K ***Metered-Flow with Polypropylene Housing—*** Flow rate is selectable so you dispense only the amount of liquid you need. Discharge spout rotates 360°. Maximum temperature is 125° F. Minimum temperature and maximum viscosity are not rated.

L ***Polyethylene Housing—*** Have a flexible discharge spout. Maximum temperature is 150° F. Minimum temperature and maximum viscosity are not rated.

M ***High-Flow with Polyethylene Housing—*** Has a 90° angled spout. Temperature range is 40° to 158° F. Maximum viscosity is 1,000 centipoise (similar to castor oil).

ⓘ For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **4249KAC**.

	Common Compatible Chemicals	Flow Rate, oz./Stroke	For Container	Fits Bung Size	*Intake Tube* Lg.	*Intake Tube* OD	Each

For information about pump performance, see page 328.

Plastic Pail-and-Drum Pumps for Small Containers

These lightweight, chemical-resistant pumps have few moving parts to wear out for a long life. All have a PVC housing.

***A* Handheld Pail and Drum Pumps**—Temperature range is 32° to 120° F. Maximum viscosity is 2,500 centipoise (similar to shampoo).

4324K27 is dual function; when the handle is fully extended, it works like a siphon pump. It has an intake tube attached at a 90° angle. 4324K34 has two intake tubes.

***B* Handheld Pail Pump**—Use as a handheld pump or with an optional bung connector to attach the pump to a container (connectors sold separately below). Temp. range is 32° to 120° F. Max. viscosity is 2,500 centipoise (similar to shampoo).

***C-E* Pail- and Drum-Mount Pumps**—Bung connector is included.

Styles C and D have a temperature range of 32° to 120° F. Maximum viscosity is 2,500 centipoise (similar to shampoo).

Style D pumps are dual function; when the handle is fully extended, they act as a siphon pump.

Style E pumps have a maximum temperature of 120° F and a maximum viscosity of 704 centipoise (similar to liquid detergent). Minimum temperature is not rated. 2578K25 has a 0.77″ OD nondrip spout. 2578K15 has a discharge tube.

For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **4324KAC**.

	Common Compatible Chemicals	Flow Rate, oz./Stroke	For Container	Fits Bung Size	Intake Tube Lg.	Intake Tube OD	Discharge Tube Lg.	Discharge Tube ID × OD	Each

Optional Bung Connectors for Handheld Pail Pump (Style B)

Polypropylene Connectors

For 2″ Diameter Bung Opening ..... **4938K21** **Each** $6.75

For 32 mm Bung Opening (Rieke Jr.) ..... **4938K22** **Each** $6.50

Polyethylene Connectors

For ¾″ Bung Size (Rieke Sr.) ..... **4938K23** **Each** $5.00

For 70 mm Diameter Bung Opening ..... **4938K24** **Each** $5.00

Plastic Drum Pumps

A long PVC intake tube reaches to the bottom of your drum and provides high-flow output with every push of the plunger. All pumps have a PVC housing and a 2″ bung connector.

***F* Standard**—Maximum temperature is 120° F, and maximum viscosity is 704 centipoise (similar to liquid detergent). Minimum temperature is not rated. 2578K45 has a ¾″ OD discharge spout, while 2578K35 has a discharge tube.

***G-J* High Viscosity**—Maximum viscosity is 2,500 centipoise (similar to shampoo). *Styles G & J* have a temperature range of 32° to 120° F. *Style H* has a temperature range of 32° to 100° F.

For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **2578KAC**.

	Common Compatible Chemicals	Flow Rate, oz./Stroke	For Container	Fits Bung Size	Intake Tube Lg.	Intake Tube OD	Discharge Tube Lg.	Discharge Tube ID × OD	Each

For information about pump performance, see page 328.

FDA-Compliant Plastic Drum Pumps

3047K11

For food and beverage applications, these pumps are made entirely of FDA-compliant materials and conform to regulations under CFR 21 for indirect food contact. Bung connector is included. Temperature range is 32° to 120° F. Maximum viscosity is 175 centipoise (similar to cough syrup).

3047K11 has a curved discharge spout. 3047K21 has a discharge tube.

For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **3047KAC**.

Common Compatible Chemicals	Flow Rate, oz./Stroke	For Container	Fits Bung Size	*Intake Tube* Lg.	*Intake Tube* OD	*Discharge Tube* Lg.	*Discharge Tube* ID×OD	Each
Chlorine, Deionized Water, Diesel Fuel, Ethanol, Gasoline, Glycol, Hydraulic Oil, Hydrochloric Acid (37%), Isopropyl Alcohol, Kerosene, Methanol, Motor Oil, Nitric Acid, Phosphoric Acid, Salt Water, Sodium Hypochlorate, Sulfuric Acid (75%), Water	5	5 to 15 gal.	2″	12″	5/8″	—	—	**3047K11** ... $34.00
	5	5 to 15 gal.	2″	12″	5/8″	9″	13/32″×9/16″	**3047K21** ... $32.32

High-Flow Plastic Drum Pumps

For high-flow applications, these pumps deliver fluid on both the forward and backward strokes. Mount the pump handle above or below the pump body for easy operation at any angle. You can lock the handle using a padlock (not included) with a maximum shackle diameter of 1/4″. Pumps have a built-in tube hanger and include a bung connector. Maximum temperature is 68° F. Minimum temperature is not rated. Maximum viscosity is 352 centipoise (similar to SAE 40 oil).

A ***Pump with Discharge Spout—*** Has a rigid spout that you can remove and replace with a 1″ ID discharge hose (not included) for transfer applications.

B ***Pumps with Discharge Hose and Nozzle—*** These include an 8-ft. Lg., 1″ ID discharge hose, a nozzle, and a vacuum breaker that drains the tube to prevent siphoning.

For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **4312KAC**.

	Common Compatible Chemicals	Flow Rate, oz./Stroke	For Container	Fits Bung Size	*Intake Tube* Lg.	*Intake Tube* OD	*Discharge Hose* Lg.	*Discharge Hose* ID×OD	Each
A	Deionized Water, Diesel Fuel, Ethanol, Gasoline, Glycol, Hydraulic Oil, Isopropyl Alcohol, Kerosene, Mineral Spirits, Motor Oil, Phosphoric Acid (<40%), Salt Water, Water	32	55 gal.	2″	34″	1 5/16″	—	—	**4312K24** .. $123.68

B	Deionized Water, Diesel Fuel, Ethanol, Gasoline, Glycol, Hydraulic Oil, Isopropyl Alcohol, Kerosene, Methyl Chloride, Mineral Spirits, Motor Oil, Nitric Acid (20%), Phosphoric Acid, Salt Water, Water, Xylene	32	55 gal.	2″	34″	1 5/16″	8 ft.	3/4″×1″	**4312K33** .. $350.43

Rotary Plastic Drum Pumps

67515K75

67515K59

An easy-to-rotate handle—rather than a lever—actuates these pumps, giving you smooth, nonpulsating flow for continuous dispensing. Bung connector is included. Maximum temperature is 180° F. Minimum temperature is not rated.

C&D ***Polypropylene Housing—*** *Style C* pumps have a maximum viscosity of 400 centipoise (similar to varnish). *Style D* has a maximum viscosity of 704 centipoise (similar to liquid detergent).

E ***Ryton Housing—*** Maximum viscosity is 1,000 centipoise (similar to castor oil).

For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **67515KAC**.

	Common Compatible Chemicals	Flow Rate, oz./Stroke	For Container	Fits Bung Size	*Intake Tube* Lg.	*Intake Tube* OD	Each
C	Deionized Water (up to 72° F), Glycol, Motor Oil (up to 72° F), Nitric Acid (20%, up to 120° F), Phosphoric Acid (up to 120° F), Salt Water, Water	8	15 to 55 gal.	2″	44″	1 1/4″	**67515K75** $93.33
C	Ammonium Hydroxide, Deionized Water (up to 120° F), Glycol, Motor Oil (up to 72° F), Nitric Acid (20%, up to 120° F), Phosphoric Acid (up to 120° F), Salt Water, Water	8	15 to 55 gal.	2″	44″	1 1/4″	**67515K77** $110.80
D	Ammonium Hydroxide, Deionized Water, Glycol, Water	8	15 to 55 gal.	2″	40 1/4″	1 1/4″	**67515K51** $96.85
E	Deionized Water, Salt Water, Water	8	15 to 55 gal.	2″	40 1/4″	1 1/4″	**67515K59** $144.57

For information about pump performance, see page 328.

Easy-Stroke Plastic Drum Pumps

Use the power of leverage to pump with less effort. Pumps include a telescoping intake tube and bung connector, unless noted.

A ***Polyethylene Housing—*** Has a removable spout that you can replace with a 1 3/8″ ID discharge tube (not included) for transfer applications. Intake tube is not telescoping. Bung connector is not included. Temperature range is 0° to 120° F. Maximum viscosity is 1,000 centipoise (similar to castor oil).

B&C ***Polypropylene Housing—*** Spout rotates 360°. *Style B* has a maximum temperature of 125° F and a maximum viscosity of 2,200 centipoise (similar to SAE 140 transmission-grade oil). Minimum temperature is not rated. Bung connector is not included. *Style C* has a temperature range of –15° to +150° F. Maximum viscosity is 15 centipoise (similar to vinegar). Bung connector is built-in.

D ***Metered Flow with Ryton Housing—*** Flow rate is selectable so you dispense only the amount of liquid you need. This pump also has a removable spout that you can replace with a 1″ ID discharge tube (not included) for transfer applications. Maximum temperature is 180° F and maximum viscosity is 500 centipoise (similar to caramel). Minimum temperature is not rated.

ⓘ For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **43035KAC**.

	Common Compatible Chemicals	Flow Rate, oz./Stroke	For Container	Fits Bung Size	*Intake Tube* Lg.	*Intake Tube* OD	Each
A	Chlorine, Deionized Water, Ethanol, Glycol, Hydraulic Oil, Hydrochloric Acid, Isopropyl Alcohol, Motor Oil, Nitric Acid (50%), Phosphoric Acid, Salt Water, Sodium Hypochlorate, Sulfuric Acid (75%), Water	20	15 to 55 gal.	2″	35″	1 13/16″	**43035K67** $77.73

D	Deionized Water, Motor Oil, Phosphoric Acid (<40%, up to 72° F), Water	8, 10, or 12	15 to 55 gal.	1 1/2″ and 2″	24 1/2″ to 34 1/2″	1 1/8″	**2515K45**... $94.35

Siphon Plastic Drum Pumps

Siphon pumps provide a suction force to draw liquid out of its container. Once you get them started pumping, they'll continue to pump without any more help from you.

E&F ***Squeeze-Bulb Style—*** Housing is polyethylene. *Style E* has a temperature range of 0° to 150° F. Maximum viscosity is 150 centipoise (similar to cough syrup). *Style F* includes a 33 mm unthreaded adapter (fits Rieke Flex Spout). Maximum temperature is 140° F, and maximum viscosity is 50 centipoise (similar to SAE 10 motor oil). Minimum temperature is not rated.

G ***Bellows-Action Style—*** Housing is polyethylene. Bung connector is included. Maximum temperature is 140° F, and maximum viscosity is 88 centipoise (similar to olive oil). Minimum temperature is not rated.

H ***Battery Operated for Kerosene—*** Operates on two D batteries (not included). It fits in a 1 13/64″ unthreaded hole. Housing is polypropylene. Maximum temperature is 140° F, and maximum viscosity is 3 centipoise (similar to water). Minimum temperature is not rated

J ***Battery Operated for Water—*** Operates on two D batteries (not included). Pump has a 3/4″ OD discharge spout. Intake tube fits in a 55 mm unthreaded hole. Housing is polypropylene. Maximum temperature is 120° F, and maximum viscosity is 3 centipoise (similar to water). Minimum temperature is not rated.

ⓘ For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **9894KAC**.

Electric Drum Pumps

A

B

C

D

E

F

G

For fast draining and transferring with less hassle than hand-operated pumps, these have a compact, single-phase, electric motor. All fit 55-gallon drums, except 42895K81 and 6800K12, which fit 30-gallon drums.

A Adjustable Flow, Variable Speed Motor— Motor is continuous duty and has thermal overload protection. Pumps have a polypropylene housing (unless noted), a 9-ft. power cord with two-prong plug, and a wall bracket for storage. Bung connector is not included. Maximum viscosity is 300 centipoise (similar to SAE 40 oil). *Repair kits* include bearings, couplings, impeller, diffuser, O-rings, and bushings.

B High Flow with Polyester Housing— A powerful continuous duty motor gives you high flow rates and handles viscosities up to 704 centipoise (similar to liquid detergent). Pumps have a 15-ft. power cord with two-prong plug. Bung connector is not included. 4316K27, *K28*, *K49*, and *K65* have a barbed discharge connection for 1″ ID tube; 4316K68 has a discharge connection for ¾″ NPT female and 1¼″ ID tube. *Repair kits* include coupling, bearing assembly, vapor seal, O-ring, and impeller.

C High Flow with Nylon Housing— A double impeller increases suction for high-flow applications. Motor is continuous duty. Pumps have a 12-ft. power cord with three-prong plug and a 2″ bung connector. Maximum viscosity for all is 500 centipoise (similar to caramel). *Repair kit* includes bearing assembly and vapor seal.

D Hazardous Location with Aluminum Housing— UL listed for use in Class I, Groups C and D; and Class II, Groups F and G environments. Motor is intermittent duty and has thermal overload protection and a 16-ft. cord with no plug. Discharge is barbed for 1″ ID tube. Bung connector is not included. Max. viscosity is 300 centipoise (similar to SAE 40 oil). *Repair kit* includes bearings, couplings, impeller, hand wheel, bushing, and seal.

E High Viscosity with Aluminum Housing— For viscous fluids up to 1,000 centipoise (similar to castor oil). Motor is intermittent duty (30 minutes max. on; 5 minutes min. off). Pumps have a 2″ bung connector. 2539K34 has an 8-ft. power cord with three-prong plug. 2539K78 has a 6-ft. power cord with three-prong plug. *Repair kit* includes impeller, O-rings, and seal.

F Adjustable Flow, High Viscosity— An adjustable motor with thermal overload protection lets you control the flow rate of fluids up to 1,500 centipoise (similar to SAE 70 oil). Motor is intermittent duty (2 hours max. on; 15 min. off). Pumps have a polypropylene housing (unless noted), a 16-ft. power cord with three-prong plug, and a barbed discharge connection for 1″ ID tube. Bung connector is not included. *Repair kits* include housing, couplings, impeller, and motor brush set.

G Precision-Metered Low Flow with Cast Zinc Housing— Get precise control over your pump's flow. These pumps let you make flow adjustments in 2% increments. Motor is continuous duty. They include an 8-ft. power cord with three-prong plug, and an unthreaded bung connector that fits into a 2″ bung hole. Maximum viscosity is 1,500 centipoise (similar to SAE 70 oil). *Repair kits* include seals, valves, and piston.

Compact Electric Pump for Small Containers

A compact dual-speed motor and short intake tube make this pump ideal for draining and filling 1 gal. to 5 gal. containers. It is handheld and does not connect to a bung. Motor is 1/5 hp, continuous duty, single phase, and operates on 115 VAC, 60 Hz, 2 amps. It has thermal overload protection and a 12-ft. power cord with two-prong plug. Housing is nylon; intake tube is 15″ Lg., 1¼″ OD; and discharge tube is 5 ft. Lg., ¾″ ID×1″ OD. Temperature range is 0° to 150° F. Maximum viscosity is 300 centipoise (similar to SAE 40 oil).

ⓘ For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **3420KAC**.

Common Compatible Chemicals	Flow Rate, gpm	Discharge Pressure, psi	Each
Ammonium Hydroxide, Deionized Water, Glycol, Nitric Acid (30%), Phosphoric Acid (30%), Salt Water, Sodium Hydroxide (18%), Sulfuric Acid (27%, up to 110° F), Water	7/17	2.1/8.6	**3420K21** $308.69

For information about pump performance, see page 328.

Sanitary Electric Drum Pumps

For sanitary food applications, these pumps have a polished Type 316 stainless steel intake tube and a quick-clamp (tri-clamp) discharge connection that meets 3-A sanitary standard requirements. Ideal for wines, flavorings, and sauces. Use with a 55-gallon drum. Motor is intermittent duty (2 hours max. on; 10 minutes min. off), single phase, and operates on 120 VAC, 60 Hz. It has thermal overload protection and a 16-ft. power cord with two-prong plug. Pump housing is polypropylene. Bung connector is not included. Discharge connection is 1½″ quick clamp (see pages 208-210 for quick-clamp fittings). Temperature range is 32° to 248° F.

For 3328K11 and ***K12***, motor is 7/10 hp, 5.2 amps; maximum viscosity is 600 centipoise (similar to caramel).

For 3328K13 and ***K14***, motor is 1 7/10 hp, 7.5 amps; maximum viscosity is 800 centipoise (similar to glycerin).

For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **3328KAC**.

Common Compatible Chemicals	Flow Rate, gpm	Discharge Pressure	Intake Tube Lg.	Intake Tube OD	Each
All at 68° to 140° F, unless noted: Ammonium Hydroxide, Deionized Water, Glycol (up to 105° F), Hydraulic Oil, Motor Oil, Nitric Acid (10%), Phosphoric Acid (up to 85% at 105° F), Sodium Hydroxide (50%), Water	32	13 psi	39″	1 11/16″	3328K11 ... $2,198.55

	42	17 psi	47″	1 11/16″	3328K14 ... $2,473.19

Electric Pumps with Nozzle for Fuel

For high-flow transfer of gasoline, kerosene, diesel fuel, and other low-viscosity petroleum products, these pumps are rated for Class I, Group D hazardous locations. All have an intermittent duty (30 minutes max. on; 30 minutes min. off), single-phase motor with thermal overload protection. Pumps include a 2″ bung connector and a 12-ft. discharge hose with grounding wire. Max. viscosity is 10 centipoise (similar to diesel fuel).

Standard pumps have a 1/8 hp motor that includes a circuit breaker to prevent overload, screw terminals, and a ½″ NPT female conduit connection. Intake hose telescopes from 22″ to 40″. Housing is aluminum. Motor operates on 115 VAC, 50/60 Hz, 1.5 amps. UL listed and CSA certified.

Pump with *automatic shutoff nozzle* turns off when tank is full.

Pumps with meter register up to 99,999.9 gallons. They include a built-in strainer, a check valve, and a bypass valve to prevent pressure build-up when the nozzle is closed. Nozzle is lockable using a padlock with a ⅜″ maximum shackle diameter (padlock not included). Motor is ⅓ hp and has screw terminals and a ½″ NPT female conduit connection. It operates on 115 VAC, 60 Hz, 5.5 amps. Housing is cast iron. Intake connection is 1¼″ NPT female. UL and C-UL listed. Pumps with a ***meter and motor housing*** have a steel enclosure around the motor. Intake connection is 2″ NPT female.

Pedestal-mount pumps allow you to mount the pump off the tank.

Anti-Siphon Kit for Pumps with Meter and Pumps with Meter and Motor Housing ..... 6753K61 **Each** $41.14

Battery-Operated Pumps with Nozzle for Fuel

Use these battery-operated pumps for heavy duty dispensing and transferring of gasoline, diesel fuel, and kerosene. All have an intermittent duty (30 minutes max. on; 30 minutes min. off), single-phase motor with thermal overload protection. Pumps have a cast iron housing, a 2″ bung connector, and 12-ft. discharge hose with antistatic wire.

Standard pumps have an intake hose that telescopes from 23″ to 40½″. Nozzle is lockable using a padlock with a ¼″ maximum shackle diameter (padlock not included). Motor is ¼ hp; UL and C-UL listed; operates on 12 VDC, 20 amps; and has an 18-ft. three-wire battery cable. Max. viscosity is 30 centipoise (similar to vegetable oil).

Standard pump with meter registers up to 99,999.9 gallons.

High-flow pumps are lockable using a padlock with a 5/16″ maximum shackle diameter (padlock not included). Motor is 4/10 hp and UL listed and C-UL listed for Class I, Group D hazardous locations. It has a 15-ft. three-wire battery cable, screw terminals, a ¾″ NPT female conduit connection, 1″ NPT female intake connection (hose not included), and operates on 12 VDC, 35 amps. Maximum viscosity is 10 centipoise (similar to diesel fuel). Pump with *automatic shutoff nozzle* turns off when tank is full.

Portable Battery-Operated Pump for Diesel Fuel

Battery operated for portability, this cast iron pump is designed for handling diesel fuel. Pump has an intermittent duty motor (30 minutes max. on; 30 minutes min. off) that operates on a 12 VDC battery and draws 18 amps (battery not included). Pump has a handle, bypass relief valve, and two ¾″ barbed hose adapters. Pump includes a 6-ft. insulated battery cable, battery clamps, and an on/off switch. Maximum temperature is 158° F, and maximum viscosity is 24 centipoise (similar to vegetable oil). Minimum temperature is not rated.

Flow Rate, gpm	Max. Lift	Discharge Pressure, psi	Each
10.5	6.5 ft.	15	99155K33 ... $212.59

For information about pump performance, see page 328.

Air-Powered Drum Pumps

When electricity isn't an option, such as a nonsparking application, try these pumps that have an air motor instead of an electric motor. They provide smooth, nonpulsating flow in a smaller package than the air-powered diaphragm pumps on page 345. All include a 2″ bung connector for 30-gallon and larger drums. Discharge connection is barbed for 1″ ID tube, except for Style A, which has a barbed connection for ¾″ ID tube.

A ***Low Flow with Cast Iron & Aluminum Housing—*** Pumps include a 5-ft. Lg., ¾″ ID×1″ OD discharge tube and a 15-ft. air hose assembly. Temperature range is 0° to 150° F. Maximum viscosity is 300 centipoise (similar to SAE 40 oil).

B ***Cast Iron & Aluminum Housing with Filter/Lubricator—*** Pumps include a 5-ft. Lg., 1″ ID×1¼″ OD discharge tube and a 15-ft. air hose assembly, muffler, and ball valve. Temperature range is 40° to 160° F. Maximum viscosity is 330 centipoise (similar to SAE 40 oil).

C ***Cast Iron & Aluminum Housing with Filter/Lubricator—*** Pumps include a 5-ft. Lg., 1″ ID×1¼″ OD discharge tube and a 15-ft. air hose assembly, muffler, and ball valve. Temperature range is 40° to 150° F. Maximum viscosity is 2,000 centipoise (similar to hand cleaner).

D ***Hazardous Location with Cast Iron & Aluminum Housing and Filter/Lubricator—*** Rated for Class I, Division I hazardous locations. Pumps include a 4-ft. Lg., 1″ ID×1½″ OD grounded discharge tube, a grounded strap clamp, a 15-ft. air hose assembly, muffler, and ball valve. Temperature range is 40° to 220° F. Maximum viscosity is 330 centipoise (similar to SAE 40 oil).

E ***Hazardous Location High Flow with Aluminum Housing—*** Approved for Zone 0 hazardous locations. Pumps include two 6-ft. lengths of ground wire and a 10-ft. bonding wire for static protection. They also include a hanger for tube storage; discharge tube is not included. Temperature range is –40° to +212° F. For 2824K39 and 2824K49, maximum viscosity is 1,100 centipoise (similar to castor oil). For 8252K12 and 8252K14, maximum viscosity is 850 centipoise (similar to glycerin).

ⓘ For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **8165KAC**.

Common Compatible Chemicals: All pumps are compatible with Ammonium Hydroxide, Deionized Water, Glycol, Phosphoric Acid (<40%), Sodium Hydroxide (50%), and Water, except 8165K7 and 8165K8, which are compatible with Phosphoric Acid (<30%) and Sodium Hydroxide (18%). See table below for additional compatible chemicals.

	Additional Common Compatible Chemicals	Flow Rate, gpm	Air Pressure, psi	Air Consumption, cfm	Air Connection, NPT Female	Intake Tube Lg.	Intake Tube OD	Each

Air-Powered Drum-Pressurizing Pumps

With Discharge Spout

With fewer moving parts for less wear and tear, these pumps pressurize your drum, which forces fluid up the intake tube and out the ¾″ NPT female discharge connection. They have an adjustable air regulator that is furnished set at 6 psi, but with the included pressure gauge, you can monitor and adjust drum pressure anywhere between 1 and 6 psi—the greater the pressure, the greater the flow rate. Pumps fit 55-gal. drums and have threads for 2″ dia. bung openings. Housing is epoxy-coated aluminum. Intake tube is 1¼″ OD and telescopes from 21″ to 36″. Pumps include an air hose quick-connect coupling. Air connection is ¼″ NPT female. Maximum viscosity is 1,200 centipoise (similar to 90 weight oil).

Pump with discharge spout has a maximum temperature of 125° F. Minimum temperature is not rated.

Pump with discharge tube and nozzle has an 8-ft. long, ½″ ID×1″ OD discharge tube assembly with ¾″ NPT male connections and an aluminum shutoff nozzle. Maximum temperature is 140° F. Minimum temperature is not rated.

ⓘ For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **4224KAC**.

Common Compatible Chemicals	Discharge Style	Flow Rate, gpm	Air Pressure, psi	Air Consumption, cfm	Each
Diesel Fuel, Gasoline, Hydraulic Oil, Kerosene, Lacquer Thinner, Mineral Spirits, Motor Oil, Salt Water, Water, Xylene	Spout	18	1 to 100	6	4224K5... $405.17
Diesel Fuel, Gasoline, Hydraulic Oil (above 70° F), Kerosene, Mineral Spirits, Motor Oil (above 70° F), Salt Water, Water	Tube & Nozzle	18	1 to 100	6	4224K9... $491.38

For information about pump performance, see page 328.

High-Efficiency Air-Powered Drum Pumps

Use these pumps to deliver a smooth flow of liquid. They fit 55-gallon drums and include a 2″ dia. bung connector. Air connection is ¼″ NPT female, unless noted.

A&B ***Low Flow with Aluminum Housing—*** Both have a ¼″ NPTF (Dryseal) female air connection. *Style A* has a temperature range of 40° to 180° F. Maximum viscosity is 2,000 centipoise (similar to hand cleaner). *Style B* has a temperature range of 40° to 150° F and a maximum viscosity of 1,000 centipoise (similar to castor oil).

C ***Aluminum Housing—*** Maximum temperature is 140° F, and maximum viscosity is 1,500 centipoise (similar to SAE 70 oil). Minimum temperature is not rated.

D&E ***Aluminum Housing with Telescoping Intake Tube—*** Intake tube telescopes from 32″ to 60″. Maximum temperature is 180° F, and maximum viscosity is 2,200 centipoise (similar to hand cleaner). Minimum temperature is not rated. 2558K51 has a ⅜″ NPT female air connection.

F ***Steel Housing with PVC Extension Tube—*** Includes a 24″ PVC intake tube extension. Temperature range is –10° to +180° F. Maximum viscosity is 1,760 centipoise (similar to SAE 70 oil).

G ***High Temperature with Aluminum Housing—*** Temperature range is –30° to +300° F. Maximum viscosity is 1,500 centipoise (similar to SAE 70 oil). Air connection is ⅛″ NPT female.

H ***FDA Compliant with Aluminum Housing—*** Wetted parts are FDA CFR21 110.40 compliant for direct contact with food, water, and beverage. Temperature range is –30° to +212° F. Maximum viscosity is 1,200 centipoise (similar to 90 weight oil).

ⓘ For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **4304KAC**.

Extended-Life Air-Powered Diaphragm Drum Pumps

Designed with a twin diaphragm to eliminate the need for rotors, gears, and pistons that can wear down and shorten pump life. Pumps fit 55-gallon drums and include a 2″ dia. bung connector. They can run dry without damage. Intake and discharge connections are NPT female, except for the FDA-compliant pump, which has quick-clamp sanitary (tri-clamp) connections. (See pages 208-210 for quick-clamp fittings.) Air connections are ¼″ NPT female for all. *Repair kits* include diaphragms, valves, and O-rings.

ⓘ For the compatibility of 36 common chemicals and a complete list of wetted parts, go to mcmaster.com and search for **2534KAC**.

▲ 3,000 centipoise is similar to liquid soap; 8,000 centipoise is similar to molasses.

About Positive Displacement and Centrifugal Pumps

Collectively, diaphragm pumps, gear pumps, piston pumps, rotary vane pumps, flexible impeller pumps, and peristaltic pumps are known as ***positive displacement pumps***—they draw fluid on one stroke and discharge it on the next. In high- or varying-pressure applications or for pumping high-viscosity fluids, positive displacement pumps hold a constant flow rate much better than centrifugal pumps. Also, positive displacement pumps generally are ***self-priming***—they create enough of a vacuum to draw fluid without assistance.

Centrifugal pumps are best for transfer applications with high flow rates and low pressure and viscosity. They typically are not self-priming and require a gravity-feed setup (see below).

The chart below will help you choose the pump that's best for your application.

Pump Style	Flow	Feet of Head (Pressure)	Self-Priming?	Viscosity	Run Dry?	Use with Solids?	Pulsating Flow?	Features	Pages
Hand- & Air-Powered Diaphragm	High	Medium	Yes	High	Yes	Yes	Yes	Use when electricity isn't convenient. Submersible; self-priming; run dry without damage. Few moving parts to wear.	346-349
Gear/ Rotary Screw	Low	Medium	Yes	High @ Low Flow	No	No	No	For abrasive-free, highly viscous liquids. Ideal for low-flow metering and dispensing applications at high pressures.	350-351
Piston	Low	Very High	No	Low	No	No	Yes	Common in pressure washing and spraying; low flow at high pressures.	351-352
Rotary Vane	Low	Medium	No	Low	No	No	No	Continuous, nonpulsating low flow at medium pressures.	352
Flexible Impeller	Medium	Low	Yes	Low	No	Yes	No	Continuous, nonpulsating flow in low-pressure applications.	352-353
Peristaltic Metering	Low	Low	Yes	High	Yes	No	Yes	Also known as tubing pumps, good for dispensing and injecting. No seals to leak or contaminate fluid; minimal wetted parts.	353-354
Diaphragm Metering	Low	High	Yes	Medium	Yes	No	Yes	For dispensing and injecting, built-in controls move a precise amount of fluid.	355
Centrifugal	High	Low	No	Low	No	No	No	Most common transfer pump produces smooth, nonpulsating flow. High-volume flow at low pressures.	356-362

Do You Need A Self-Priming Pump?

Whether you are installing a pump in a new or existing system, be sure to choose a pump that will work with your setup.

Suction Lift—The source of the liquid is lower than the pump's inlet, and the pump must draw the liquid up. You'll need a self-priming pump for this type of application.

Gravity Feed—Also known as flooded suction, the source of the liquid is higher than the inlet of the pump, so liquid flows into the pump by gravity. Most pumps—self-priming or not—will work in this type of application.

Hand- & Air-Powered Diaphragm Pumps

For information about pump performance, see page 328.

Hand-Operated Diaphragm Pumps

A little elbow grease is all these pumps need to do their job. All pumps have an acetal housing. Intake and discharge connections are unthreaded male slip-on style. All pumps have check valves, are self-priming, and can be run dry. Not for use with solids. Maximum discharge pressure is 12 feet of head (5 psi). Maximum viscosity is 100,000 centipoise (similar to toothpaste). Temperature range is 33° to 140° F.

Common Compatible Chemicals
Deionized Water, Glycol, Salt Water, Water

Versa-Mount Plastic Air-Powered Diaphragm Pumps

Spring-loaded check valves and a compact design allow these pumps to mount almost anywhere—even upside down and sideways. They are self-priming and can run dry for short periods of time. Not for use with solids. Max. air pressure is 100 psi. Max. discharge pressure is 231 feet of head (100 psi). Max. viscosity is not rated. Overall size is 5⅝″ Ht.×5½″ Wd.×8 1/16″ Dp.

Plastic Air-Powered Diaphragm Pumps

Connect your existing air compressor to run these pumps without electricity in harsh environments. They have durable twin diaphragms that handle high-viscosity liquids with solids. They're submersible, easy to hook up, self-priming, and can run dry. Maximum air pressure is 100 psi. Maximum discharge pressure is 231 feet of head (100 psi). Fluid connection is NPT female; air connection is 1/4″ NPT female. Maximum viscosity is not rated, unless noted.

▲ Maximum viscosity is 1,000 centipoise (similar to castor oil). ◤ Maximum viscosity is 10,000 centipoise (similar to chocolate syrup).

Flanged High-Flow Plastic Air-Powered Diaphragm Pumps

For large diameter pipe and high flow, these pumps have easy-to-connect Class 125 flanged fluid connections and an NPT female air intake connection. (See pages 8 and 9 for flanges.) They also have durable twin diaphragms that reduce pulsating flow and can handle high-viscosity liquids and liquids with solids. They're self-priming, submersible, easy to hook up, and can be run dry. Maximum air pressure is 100 psi. Maximum discharge pressure is 231 feet of head (100 psi). Maximum viscosity is not rated. Temperature ranges are 40° to 150° F for polypropylene housing; 32° to 120° F for nylon housing; 10° to 200° F for PVDF housing.

Smooth-Flow Polypropylene Air-Powered Mini Diaphragm Pumps

A fast-acting, air-control switching mechanism maintains consistent flow and pressure to minimize pulsating flow. Use for soap dispensing and agricultural sprayers. Pumps operate on compressed air, carbon dioxide, or nitrogen. They are self-priming and have barbed connections. Do not run dry. Housing is polypropylene. Supplied with a nylon side-mounting bracket with two 7/32″ slots. Max. air pressure is 60 psi. Max. discharge pressure is 125 feet of head (54 psi). Max. viscosity is 2,500 centipoise (similar to shampoo).

Aluminum Air-Powered Diaphragm Pumps for Fuel

For use with fuels, these pumps have a pressure-relief valve set at 50 psi per UL 79 safety standard. Housing is aluminum and diaphragms are fluoroelastomer. Pumps are self-priming, submersible, and can run dry. Maximum air pressure is 50 psi. Maximum discharge pressure is 115 feet of head (50 psi). Maximum viscosity is not rated. Temperature range is 10° to 180° F. UL listed for pumping petroleum products.

For information about pump performance, see pages 328 and 346.

High-Flow Metal Air-Powered Diaphragm Pumps

More impact resistant than the plastic diaphragm pumps on page 347, these pumps also have durable twin diaphragms that reduce pulsating flow and can handle high-viscosity liquids and liquids with solids. Pumps include a metal muffler and grounding strap. All are self-priming and run on compressed air so they are intrinsically safe for use in hazardous locations. They can be run dry. Maximum air pressure is 100 psi. Maximum discharge pressure is 289 feet of head (125 psi). Maximum viscosity is 10,000 centipoise (similar to chocolate syrup) for pumps with a max. flow of 15 gpm; for all other pumps, maximum viscosity is not rated.

Temperature range for pumps with a neoprene diaphragm is –35° to +200° F. Temperature range for pumps with a Santoprene diaphragm is –35° to +275° F. Temperature range for pumps with a PTFE diaphragm is –35° to +220° F.

High-Flow Metal Air-Powered Diaphragm Pumps for Solids

Check valves with flaps allow these pumps to handle fluids containing large particles without damaging the diaphragm. All are self-priming, submersible, and can run dry. Pumps have a top intake and a bottom discharge connection. Maximum air pressure is 100 psi on pumps with a 2″ fluid connection and 125 psi on pumps with a 1″ fluid connection. Maximum discharge pressure is 289 feet of head (125 psi). Maximum viscosity is not rated. ***8090K33*** has a 3″ flanged fluid connection; the flange measures 7½″ OD, ⅞″ thick, and has four ¾″ diameter holes on a 6″ bolt circle.

For information about pump performance, see pages 328 and 346.

Gear Pumps

Gear pumps are self-priming and produce nonpulsating, smooth flow. Do not run dry or use with solids. Connections are NPT female.

Pumps with motor and relief valve arrive ready to go with the included motor with relief valve to prevent pressure buildup. At reduced speeds, viscosity can reach up to 17,600 centipoise (similar to SAE 70 oil); at full speed (1,725 rpm), maximum viscosity is 88 centipoise (similar to olive oil). Motor has a connection box with screw terminals.

Bronze Housing—Gears are bronze, unless noted. Max. discharge pressure is 100 psi, unless noted. Temperature range is –20° to +210° F. Motor is continuous duty. 1/2- and 1-hp motors are open dripproof (ODP) and have thermal overload protection. 1 1/2- and 3-hp motors are totally enclosed fan-cooled (TEFC).

Cast Iron Housing—Gears are steel. Pumps include an open dripproof (ODP), continuous duty motor; single-phase motors have thermal overload protection. Maximum discharge pressure is 125 psi. Temperature range is 32° to 280° F.

Pumps without motor leave it up to you—connect a spark-free air motor for hazardous locations. Use an electric motor with a speed reducer or belt pulley to customize the pump rpm. Max. rpm is 1,725. Use a NEMA 56C frame motor with a coupling and belt/pulley drive. (See page 1028 for air motors and page 1020 for electric motors.) "Potential Flow Rates" show you how powerful a motor you'll need to reach a particular flow rate at a particular pressure. *Note:* Pumps do not mount directly to a motor.

Bronze Housing—Gears are bronze. Depending on pump speed and port size, max. viscosity can reach 17,600 centipoise (similar to SAE 70 oil). Max. pressure is 100 psi. Temp. range is –20° to +210° F.

Cast Iron Housing—Gears are steel. Max. viscosity is 88 centipoise (similar to olive oil). Max. pressure is 125 psi. Temp. range is 32° to 280° F.

Corrosion-Resistant Gear Pumps without Motor

With Packing Seal

All pumps have a Type 316 stainless steel housing, cover, and shaft for corrosion resistance in harsh environments. And without a motor, you can customize these pumps to fit your application—connect a spark-free air motor for hazardous locations. Use an electric motor with a speed reducer or belt pulley to customize the pump rpm. Max. rpm is 1,725. (See page 1028 for air motors and page 1020 for electric motors.) Use a motor with a NEMA 56C frame. Pumps are self-priming and cannot run dry. Do not use with solids. Connections are NPT female. "Potential Flow Rates" show you how powerful a motor you will need to reach a particular flow rate at a particular pressure.

With Packing Seal—Fluid will drip slightly through the packing in the nose of the pump. Packing is PTFE, drive gear is Type 316 stainless steel, and idler gear is glass-reinforced PTFE. At reduced speeds, maximum viscosity can reach up to 17,300 centipoise (similar to SAE 70 oil); at full speed (1,725 rpm), maximum viscosity is 9 centipoise (similar to water). Maximum pressure is 100 psi. Temperature range is 50° to 400° F.

With Leak-Resistant PTFE Seal—Gears are Ryton with an oilless carbon graphite bushing. At reduced speeds, maximum viscosity can reach up to 17,600 centipoise (similar to SAE 70 oil); at full speed (1,725 rpm), max. viscosity is 88 centipoise (similar to olive oil). Max. pressure is 125 psi. Temperature range is 32° to 280° F.

For information about pump performance, see pages 328 and 346.

Extended-Life Gear Pumps

Designed especially for low-flow, high-viscosity liquids, these heavy duty pumps have a high-voltage motor, cast iron parts, and handle viscosities up to 880 centipoise (similar to glycerin). Motors are open dripproof (ODP) and have a connection box with wire leads. Housing is cast iron, and gears are a cast iron alloy. Pumps are not self-priming and cannot be run dry. Do not use with solids. Maximum pressure is 200 psi. Temp. range is –20° to +240° F. Connections are NPT female.

Low-Flow Miniature Gear Pumps

Commonly used in small equipment such as bar code printers and lens washers, these pumps have miniature gears and a subfractional horsepower motor for transferring small amounts of liquid. Housing and gears are acetal. Pumps are not self-priming and are rated for continuous duty. Do not run dry or use with solids. Connections are barbed. Maximum viscosity is 2 centipoise (similar to water). Temperature range is 35° to 170° F.

With Fan-Cooled Exposed Motor— Max. pressure is 20 psi. Motor has thermal overload protection and 12″ wire leads.

With Finned-Aluminum Enclosed Motor— Finned-aluminum housing gives you better cooling. Max. pressure is 22 psi. Motor is semi-dripproof and has 10″ wire leads.

Smooth-Flow Rotary Screw Pumps

Also known as progressive cavity pumps, these produce smooth, nonpulsating flow of liquids up to 880 centipoise (similar to glycerin). Rotary screws are Type 316 stainless steel with a hard chrome plate. Motors are open dripproof (ODP), continuous duty, and have thermal overload protection and a conduit box with screw terminals. They are not self-priming; do not use with solids or run dry. Connections are NPT female. Max. pressure is 70 psi. Temp. range is –40° to +180° F.

Common Compatible Chemicals
Up to 70° F: Glycol, Hydraulic Oil, Latex Paint, Motor Oil, Salt Water (8074K23 and 8074K24 only), Water
For the compatibility of 36 common chemicals and information about wetted parts, go to mcmaster.com and search for **8074KAC**.

Super-High-Pressure Air-Powered Piston Pumps

Just attach these to your compressed air supply and you're ready to pump. They're ideal for use with water and light oil in extremely high-pressure applications, hydrostatic testing, valves, tanks, and pressure switches. They operate on air pressure from as low as 15 psi up to 145 psi (actual output pressure is calculated by multiplying the inlet air pressure by the ratio shown in the table below). Pumps have a Type 303 stainless steel housing; bottom intake; side discharge; and an intermittent duty (30 minutes max. on, 30 minutes min. off), self-priming air motor. Do not use with solids or run dry. Max. viscosity is 100 centipoise (similar to cough syrup). Temp. range is 32° to 140° F. Air and fluid connections are NPT female.

Common Compatible Chemicals	
Up to 70° F: Diesel Fuel, Gasoline, Glycol, Hydraulic and Motor Oil (petroleum based only), Isopropyl Alcohol, Kerosene, Water	6770K28
Up to 70° F: Hydraulic and Motor Oil (petroleum based only), Water	6770K43, 6770K41
For the compatibility of 36 common chemicals and information about wetted parts, go to mcmaster.com and search for **6770KAC**.

For information about pump performance, see pages 328 and 346.

Piston Pumps without Motor for Pressure Washing with Water

Standard *High Pressure*

Ideal for washing and spraying applications with water and glycol, these pumps give you high-pressure output in a relatively small package. Pumps are not self-priming and cannot be run dry or used with solids. Connections are NPT female. Pumps do not include a motor, so you can choose one to fit your application. Connect an electric motor with a speed reducer or belt pulley to customize pump rpm (see page 1028 for air motors and page 1020 for electric motors).

Standard pumps have a cast iron housing. Temperature range is 32° to 140° F.

High pressure pumps have an aluminum housing. Temperature range is 32° to 160° F.

Rotary Vane Pumps for Water

Without Motor

These pumps are for use with water and deionized water at low flows and pressures up to 240 psi (554 ft. of head). They have a built-in bypass relief valve to prevent pressure build up. Vanes are carbon graphite. Connections are NPT female. Pumps are not self-priming; do not run dry or use with solids. Maximum rpm is 1,725. Temperature range is 28° to 195° F. 82395K81, *K82*, and *K83* have a built-in 71 mesh filter.

Pumps with brass housing are NSF 61 certified for use with drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012. ***Pumps with stainless steel housing*** are NSF 61 certified for use with drinking (potable) water in all states as of March 1, 2010.

Pumps with motor include a single-phase, continuous-duty motor with thermal overload protection (unless noted) and a connection box with wire leads. Motors are totally enclosed fan-cooled (TEFC), unless noted. ***Pumps without motor*** leave it up to you—choose a spark-free air motor for hazardous locations. Or connect an electric motor with a speed reducer or belt pulley to customize the pump rpm. Use a motor with a NEMA 56C frame (see page 1028 for air motors and page 1020 for electric motors).

Flexible Impeller Pumps

These versatile pumps are self-priming and have a wear-resistant flexible rubber impeller that can handle suspended solids. All have a continuous duty, single-phase motor with thermal overload protection. Motor is open dripproof (ODP), unless noted. Do not run dry. Connections are NPT female. Temp. range is 60° to 180° F. ***Pumps with bronze housing*** have an 8-ft. cord with three-prong plug. Max. viscosity is 125 centipoise (similar to cough syrup), unless noted. ***Pump with Type 316 stainless steel housing*** has 6" wire leads. Max. viscosity is 2,000 centipoise (similar to hand cleaner).

★ Motor is totally enclosed nonventilated (TENV). ◤ Dual-threaded with 3/4" garden hose (GHT) male connection. ♥ Maximum viscosity is 250 centipoise (similar to SAE 40 oil). ♠ Maximum viscosity is 500 centipoise (similar to caramel). ♣ Motor is totally enclosed fan-cooled (TEFC).

For information about pump performance, see pages 328 and 346.

Flexible Impeller Pumps without Motor

Drill-Driven Pumps— Connect your drill to these pumps to generate flow in small pumping jobs. Pumps are self-priming. Do not run dry or use with solids. Housing is glass-filled polyester. Connections are ¾″ male garden hose thread (GHT). Maximum viscosity is 1 centipoise (similar to water). *Pump with intake/discharge tubes* has a 30″ Lg. slip-on intake tube and a 35″ Lg. discharge tube with a female garden hose thread (GHT) connection.

Motor-Driven Pumps— Choose a spark-free air motor for hazardous locations, or use an electric motor with a speed reducer or belt pulley to customize the pump rpm. (See page 1028 for air motors and page 1020 for electric motors.) Pumps have a bronze housing, operate at speeds from 500 to 2,000 rpm (unless noted), and are self-priming to 10 ft. Do not run dry. Connections are NPT female. Max. viscosity is 500 centipoise (similar to caramel).

● Motor operates at speeds from 500 to 2,200 rpm.

Versa-Mount Compact Diaphragm Pumps

Mount these compact pumps in any position for fluid transfer, spraying, and dispensing. All have a polypropylene housing, Santoprene diaphragm, and a single-phase motor that operates on 115 VAC, 50/60 Hz, unless noted. It has thermal overload protection and a 6-ft. cord with three-prong plug, unless noted. Pumps are self-priming and can be run dry. All except 8080K18 are UL listed and have a pressure switch that automatically shuts off the pump at the maximum pressure.

Energy-Efficient Intermittent Duty— These pumps have a subfractional horsepower motor and low amp draw for low-flow applications at medium to high pressures. Rated for intermittent use (max. 90 minutes on; return to 72° F before restarting). Do not use with solids. Maximum viscosity is not rated.

Continuous Duty— For low-flow applications at low pressures. Motor is 3/16 hp. Pump includes two ½″ hose barb adapters and two ½″ Quest male adapters. Max. solid diameter is 1/64″. Max. viscosity is 250 centipoise (similar to SAE 40 oil). CSA certified.

★ Has 14″ wire leads (does not include cord and plug). ■ Nylon housing. ▲ Motor is 60 Hz and has a 4-ft. power cord.

Fixed-Flow Peristaltic Metering Pumps

Dispense a precise amount of fluid at a specific flow rate. These pumps include 9″ lengths of 1/16″, ⅛″, 3/16″, and ¼″ ID Norprene tubing so you can increase or decrease flow by switching tubing. Tubing durometer is Shore A55-60. Self-priming up to 29 feet. Pumps can be run dry. Do not use with solids. Motor is less than 1/200 hp, continuous duty, single phase, and operates on 115 VAC, 60 Hz. Pumps have an on/off switch and 6-ft. cord with three-prong plug. Maximum pressure is 20 psi (46 ft. of head). Maximum viscosity is 10,000 centipoise (similar to chocolate syrup). Temperature range is −75° to +275° F. Overall size is 5 13/16″ Ht.×6¼″ Wd.×5 11/16″ Dp. UL listed and CSA certified.

Common Compatible Chemicals

43205K51

Also known as tubing pumps, these allow you to meter, dispense, or inject a precise amount of liquid. Ideal for injecting applications in boilers and water treatment applications. Pumps have an adjustable flow rate and are self-priming, easy to clean, and can run dry. Do not use with solids. Motor is single phase and continuous duty with a 6-ft. power cord and three-prong plug.

(A) Standard— Supplied with 9″ of Norprene tubing. Maximum viscosity is 1,000 centipoise (similar to castor oil).

(B) High Pressure— Internal tube is Santoprene. Supplied with 20 feet of LDPE (low-density polyethylene) suction and discharge tubing. Tubing durometer is not rated. Maximum viscosity is 10,000 centipoise (similar to chocolate syrup). UL listed, CSA certified, and CE approved.

(C) High Viscosity— Pump fluids with viscosities up to 10,000 centipoise (similar to chocolate syrup). Switches reverse to allow flow in either direction. Pumps include Santoprene tubing—9″ for 43205K51 and 14″ for 43205K52.

Ultra-High-Flow Peristaltic Metering Pump

A more powerful motor and larger tubing let this pump achieve higher flows than other metering pumps for high-volume sampling and draining applications. Pump is self-priming to 15 feet and can be run dry. Do not use with solids. Motor is continuous duty; single phase; 1/4 hp; housed in an open dripproof enclosure (ODP); operates on 115 VAC, 60 Hz, 5.4 amps; and includes an 8-ft. power cord with three-prong plug. Comes with 10″ of 1/2″ ID Norprene tubing (durometer Shore A61) and has PVC intake and discharge male hose barb connections for 1/2″ ID tubing. Maximum pressure is 20 psi. Maximum viscosity is 1,000 centipoise (similar to castor oil). Temperature range is 35° to 170° F.

Common Compatible Chemicals
Ammonium Hydroxide, Deionized Water, Glycol, Hydraulic Oil, Hydrochloric Acid (37%), Motor Oil, Nitric Acid (20%), Paint, Phosphoric Acid, Salt Water, Sodium Hydroxide (50%), Sulfuric Acid (75%), Water

ⓘ For the compatibility of 36 common chemicals and information about wetted parts, go to mcmaster.com and search for **4306KAC**.

Flow Rate, gallons/day (gallons/min.)	Overall Size, Ht. × Wd. × Dp.		Each
2,448 to 3,168 (1.7 to 2.2)	9 1/2″ × 5 1/2″ × 10″	**4306K64**	$453.69

Ultra-High-Flow Peristaltic Metering Pumps without Tubing

Pump with Motor

Choose your own tubing and customize these high-flow pumps to fit your application; tubing is the only material that contacts your liquid. Belt pulley runs on slow speeds to extend the pump's life. Pumps are self-priming to 15 feet and can run dry. Do not use with solids. Flow is adjustable. Maximum viscosity is 170 centipoise (similar to consistency of SAE 20 motor oil). Temperature range is based on the material of the tubing used.

Pumps require tubing with a hardness of approximately Shore A60. For tubing see pages 118-143. To achieve flow of 0.6 gpm, use 3/16″ ID × 7/16″ OD tubing. For 1 gpm, use 1/4″ ID × 1/2″ OD tubing. For 2.8 gpm, use 3/8″ ID × 5/8″ OD tubing. For 4.8 gpm, use 1/2″ ID × 3/4″ OD tubing.

Note: Do not use with tubing with a wall thickness greater than 1/8″.

Pump with motor includes motor, pulley, V-belt, belt guard, and steel pump base. Motor is continuous duty; single phase; 1/3 hp; thermal overload protected; and operates on 115/230 VAC, 60 Hz, 5.6/2.8 amps. Includes screw terminals. ***Pumps without motor*** include 6″ dia. pulley that accepts 4L size V-belts (not included; see page 1053). Pumps require 1/3 hp, 1,725 rpm motor with a NEMA 48 frame (see page 1022). Shaft is 1/2″ dia.

Flow Rate, gal./day (gal./min.)	Max. psi	Overall Size, Ht. × Wd. × Dp.		Each
Pump with Motor				
4,032 to 6,912 (2.8 to 4.8)	20	9 3/8″ × 15″ × 9 5/8″	**4278K5**	$905.52
Pumps without Motor				
864 to 1,440 (0.6 to 1)	20	6 1/2″ × 6″ × 4 7/8″	**4278K1**	344.42
4,032 to 6,912 (2.8 to 4.8)	20	6 1/2″ × 6 1/8″ × 5 1/2″	**4278K4**	450.58

Micro-Flow Peristaltic Metering Pumps

Use for low-flow, low-pressure liquid and gas applications such as pH buffering. Adjust flow with the speed control and by changing the tubing size. Pumps have a purge/prime switch for quick emptying and filling and a reverse switch to drain the tubing. Pumps are self-priming and can run dry. Do not use with solids. Pumps include one 3 1/4″ length each of 1/50″ ID, 1/16″ ID, 3/32″ ID, 3/16″ ID, and 1/4″ ID silicone tubing, unless noted. All tubing has a durometer of Shore A50. Motor is continuous duty, operates on 12 VDC, and includes a 115 VAC, 60 Hz, 0.35 amps (unless noted) single-phase adapter with 6-ft. cord and two-prong plug. Also includes connector for 9-volt battery (reduces flow rates). Battery not included. Maximum viscosity is 5,000 centipoise (similar to hand lotion). Temperature range is −80° to +500° F.

Common Compatible Chemicals
All up to 77° F: Ammonium Hydroxide, Glycol, Salt Water, Sodium Hydroxide (80%), Water

▲ Does not include 1/50″ ID tubing. Operates on 1.2 amps.

For information about pump performance, see pages 328 and 346.

Fine-Adjustment Diaphragm Metering Pumps

(A) Compact

Adjust the diaphragm stroke for fine control over a wide flow range. All pumps are self-priming and can be run dry. Do not use with solids. Pumps include a single-phase, continuous duty motor with thermal overload protection and a 6-ft. power cord with three-prong plug. Motor operates on 115 VAC, 60 Hz. Pump intake connection is for 5/16″ ID tubing; discharge connection is for 3/8″ ID tubing. Pumps include a 4-ft. 5/16″ ID×7/16″ OD intake tube and an 8-ft. 3/8″ ID×1/2″ OD discharge tube. Maximum viscosity is 300 centipoise (similar to SAE 30 oil). UL listed and CSA certified.

(A) Compact pumps have a Hypalon diaphragm. Temperature range is 40° to 125°F. Overall size is 6 3/4″ Ht.×7 1/4″ Wd.×8 7/8″ Dp.

(B) Medium-pressure pumps have a fluoroelastomer diaphragm. Temperature range is 40° to 122°F. Overall size is 7 3/4″ Ht.×7 1/4″ Wd.×15 1/4″ Dp.

Extreme-Accuracy Diaphragm Metering Pumps for Water

With their bellows-style diaphragm, these are our most accurate metering pumps, repeatable to within ±1% of desired flow. The flow is adjustable. Pumps are self-priming, can be run dry, and have elbow connectors for attaching tubing. Do not use with solids. Housing is ABS thermoplastic. Diaphragm is polypropylene. Check valves protect against backflow. Motor is continuous duty, single phase, and operates on 115 VAC, 60 Hz, 1.1 amps. It has thermal overload protection and a 6-ft. cord with three-prong plug. Temperature range is 32° to 104°F.

Flow Rate, gallons/day	Max. psi	Tube ID	Overall Size, Ht.×Wd.×Dp.		Each

High-Accuracy Diaphragm Metering Pumps

(E) Fine Adjustment

For dosing applications that require very high accuracy, these pumps have a solenoid-controlled diaphragm repeatable within ±2% of the maximum capacity. Pumps are self-priming and can run dry. Do not use with solids. Diaphragm has a PTFE face, Hypalon backing, and brass core. All pumps have a continuous-duty, single-phase motor that operates on 115 VAC, 50/60 Hz, 1 amp with a 6-ft. power cord and three-prong plug. Maximum viscosity is 1,000 centipoise (similar to castor oil). UL listed and CSA certified.

(C&D) Standard Pumps— Flow is adjustable while pumps are running.

Style C pumps have a 4-ft. intake tube, 8-ft. discharge tube, foot valve/strainer, ball check valve, and bleed valve, unless noted. Temperature range is 40° to 125°F. Connections are for 1/4″ ID×3/8″ OD tubing, unless noted.

Style D pumps are for high corrosion applications. All have a strainer and ball check valve (intake tubing, discharge tubing, and bleed valve not included). Temperature range is 40° to 150°F. Connections are 1/4″ NPT female.

(E) Pumps with Fine Adjustment— Microprocessor controlled for more adjustment versatility. Control automatically by using 4-20 mA or external pulse signals. Pumps have an illuminated LCD. Pump head is glass-filled polypropylene. Pumps include a 4-ft. intake tube and an 8-ft. discharge tube. Temperature range is 40° to 125°F. Connections are for 1/4″ ID×3/8″ OD tubing, unless noted.

High-Pressure Diaphragm Metering Pumps

With a more powerful motor than our other diaphragm metering pumps, these adjustable pumps deliver high pressure output, while an internal relief valve protects against overpressure. Diaphragm is PTFE. Pumps are not self-priming and cannot be run dry. Do not use with solids. Motor is continuous duty; single phase; 1/3 hp; totally enclosed fan-cooled (TEFC); and operates on 115 VAC, 60 Hz, 5.8 amps. It has thermal overload protection and an 8-ft. cord with three-prong plug. Connections are NPT male. Maximum viscosity is 1,000 centipoise (similar to castor oil). Temperature range is 40° to 180°F.

Common Compatible Chemicals

Bronze Centrifugal Pumps

With Open-Dripproof Motor

Ideal for general use with water, these popular pumps have a bronze housing and a Type 316 stainless steel or bronze impeller. Motor is rated for continuous duty and has screw terminals, unless noted. Single-phase pumps have thermal overload protection. Pumps are not self-priming—they must be placed at or below the level of the liquid being pumped. Do not run dry or use with solids. Connections are NPT female.

Pumps with a *bronze impeller* have a maximum viscosity of 16 centipoise (similar to antifreeze). Maximum temperature is 200° F. Minimum temperature is not rated. Pumps with a *stainless steel impeller* have a temperature range of 40° to 180° F and 6″ wire leads. Maximum viscosity is 5 centipoise (similar to water).

Extreme-Head Compact Bronze Turbine-Style Centrifugal Pumps

With a turbine-style impeller, these pumps generate 10 times the pressure of a standard centrifugal pump at the same diameter and speed. These have a much smaller footprint compared to multistage pressure-boosting centrifugal pumps. Great for debris-free applications with chillers, heat exchangers, and boiler feed systems. Both housing and impeller are bronze. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry or against a closed valve. Do not use with solids. Motors are open dripproof (ODP), continuous duty, and have thermal overload protection (unless noted). Single-phase motors have screw terminals; three-phase motors have 4″ wire leads. Connections are NPT female. Maximum viscosity is 55 centipoise (similar to SAE 10 oil). Temperature range is –20° to +225° F.

Common Compatible Chemicals
Ethylene Glycol, Hydraulic Oil (petroleum based only), Motor Oil (up to 70° F), Water (up to 180° F)

ⓘ For the compatibility of 36 common chemicals and information about wetted parts, go to mcmaster.com and search for **43195KAC**.

Self-Priming Cast Iron Centrifugal Pumps

With Cast Iron Impeller and Open-Dripproof Motor

Don't waste time priming these pumps—they're self-priming to 20 feet. Use for liquid transfer applications such as draining and processing waste water. Pumps have a self-cleaning impeller that resists clogging even when used with solids up to ⅜″ diameter. Motor is rated for continuous duty and has thermal overload protection and 6″ wire leads. Do not run dry. Connections are NPT female. Maximum viscosity is 5 centipoise (similar to water). Temperature range is 40° to 180° F.

Common Compatible Chemicals
Deionized Water, Ethylene Glycol, Sodium Hydroxide (20%, up to 120° F), Water

ⓘ For the compatibility of 36 common chemicals and information about wetted parts, go to mcmaster.com and search for **99435KAC**.

For information about pump performance, see pages 328 and 346.

Bronze Centrifugal Pumps without Motor

With no motor, you can customize these pumps to fit your application. Connect a spark-free air motor for hazardous locations. Or use an electric motor with a speed reducer or belt pulley to customize the pump rpm (max. rpm is 3,450). Use a motor with a NEMA 56 frame (see page 1020 for electric motors). Shaft diameter is 5/8"; shaft length is 15/16". "Potential Flow Rates" show you how powerful a motor you'll need to reach a particular flow rate at a particular rpm and pressure. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry or use with solids. Pumps have a bronze housing and bronze impeller. Connections are NPT female. Maximum viscosity is 16 centipoise (similar to antifreeze). Maximum temperature is 200° F. Minimum temperature is not rated.

Common Compatible Chemicals
Hydraulic Oil (petroleum based only), Motor Oil (up to 100 SSU), Water

For the compatibility of 36 common chemicals and information about wetted parts, go to mcmaster.com and search for **4284KAC**.

Cast Iron Centrifugal Pumps for Water Sprinklers

Power liquids up and out with these general service pumps commonly used in water systems and sprinklers. Discharge can be rotated in 90° increments. Motors are open dripproof (ODP) with built-in thermal overload protection and automatic reset. They are rated for continuous duty and have screw terminals. Pumps are not self-priming—they must be placed at or below the level of the water being pumped. Do not run dry or use with solids. Pumps have a cast iron housing and NPT female connections. Temperature range is 35° to 140° F for pumps with Noryl impeller and 35° to 225° F for pumps with brass impeller. UL listed and CSA certified.

High-Efficiency Centrifugal Pumps with Adjustable Discharge

Save energy by getting high flow and high feet of head with low amps. Housings rotate for either vertical or horizontal discharge. Motors are totally enclosed fan cooled (TEFC), unless noted, and have wire leads. Rated for continuous duty. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry or use with solids. Connections are NPT female, unless noted. Maximum viscosity is 17 centipoise (similar to antifreeze). Temperature range is 0° to 250° F.

Standard—All pumps have a cast iron housing and impeller.

High Head—Housing is ductile iron. *1- to 5-hp pumps* have a bronze impeller. *10- to 20-hp pumps* have a ductile iron impeller.

Extended-Life Type 316 Stainless Steel Centrifugal Pumps

A&B

C

A Type 316 stainless steel housing gives these pumps corrosion resistance, durability, and long life. They have a Type 316 stainless steel impeller and a totally enclosed fan-cooled (TEFC) motor (unless noted) that's rated for continuous duty. Connections are NPT female. Do not run dry.

(A) Standard— Motor has 5″ wire leads. Pumps are not self-priming—they must be placed at or below the level of the liquid being pumped. Maximum viscosity is 50 centipoise (similar to SAE 10 oil). Temperature range is –20° to +300° F.

(B) Adjustable Discharge— Adjust the discharge to four different positions. Motor has thermal overload protection and 6″ wire leads. Pumps are not self-priming—they must be placed at or below the level of the liquid being pumped. Maximum viscosity is 1 centipoise (similar to water). Temperature range is 40° to 200° F.

(C) Self-Priming— After an initial fill of the pump casing, these pumps are self-priming to 6 ft. You won't have to prime them again, making these pumps less prone to running dry—the most common cause of pump failure. Pumps have a centerline discharge to prevent stalling, thermal overload protection, and 6″ wire leads. Maximum viscosity is 1 centipoise (similar to water). Temperature range is 40° to 200° F.

Common Compatible Chemicals	
Ammonium Hydroxide, Deionized Water, Glycol, Hydraulic Oil (with flashpoint over 140° F), Motor Oil, Paint (water based only; flashpoint must be over 140° F), Phosphoric Acid, Salt Water, Sulfuric Acid (<10%), Water	*A*
Deionized Water (up to 72° F), Glycol, Hydraulic Oil, Nitric Acid (20%), Water	*B & C*
ⓘ For the compatibility of 36 common chemicals and information about wetted parts, go to mcmaster.com and search for **4320KAC**.

★ VAC at 50/60 Hz. ♠ Motor is open dripproof (ODP).

Hazardous-Location Type 316 Stainless Steel Centrifugal Pumps for Fuel

Transfer gasoline, diesel fuel, isopropyl alcohol, and other flammable liquids with these Type 316 stainless steel pumps. Motor is UL listed for use in Class I, Groups C & D and Class II, Groups F & G hazardous locations (unless noted). It is also CSA certified. Motor is totally enclosed fan-cooled (TEFC), rated for continuous duty, and has 6″ wire leads. Housing and impeller are Type 316 stainless steel. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry. Connections are NPT female. Maximum viscosity is 264 centipoise (similar to SAE 40 oil). Maximum temperature is 250° F (or, if lower, the boiling point of liquid being pumped). Minimum temperature is not rated.

Common Compatible Chemicals
Deionized Water, Diesel Fuel, Gasoline, Glycol, Hydraulic Oil, Isopropyl Alcohol, Kerosene, Methyl Chloride, Mineral Spirits, Motor Oil, Phosphoric Acid (<40%), Sodium Hydroxide (20%), Sulfuric Acid (<10%), Water, Xylene
ⓘ For the compatibility of 36 common chemicals and information about wetted parts, go to mcmaster.com and search for **8205KAC**.

For information about pump performance, see pages 328 and 346.

Sanitary Type 316 Stainless Steel Centrifugal Pumps

For use in food, beverage, and other sanitary applications, these pumps meet 3-A sanitary standard requirements for product-contact surfaces. They have a Type 316L stainless steel housing and impeller along with quick-clamp (tri-clamp) intake and discharge connections. Pump head rotates 360° for easy discharge-line connection. Motors are totally enclosed fan-cooled (TEFC), rated for continuous duty, and have 2″ wire leads. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry or use with solids. Temperature range is –40° to +275° F.

Common Compatible Chemicals
Deionized Water, Glycol, Hydraulic Oil, Motor Oil, Paint, Salt Water, Water

High-Head Type 316 Stainless Steel Centrifugal Pumps

A centrifugal impeller with multiple stages boosts pressure for transferring liquid to a great vertical height or at high pressures. Housing and impeller are made of Type 316 stainless steel. Motor is totally enclosed fan-cooled (TEFC), rated for continuous duty, and has 5″ to 6″ wire leads. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry or use with solids. Connections are NPT female. Maximum viscosity is 50 centipoise (similar to SAE 10 oil). Temperature range is –4° to +194° F. UL and C-UL listed for use with water.

Common Compatible Chemicals

Extreme-Head Multistage Centrifugal Booster Pumps for Water

With multiple impeller stages, these pumps provide a boost of pressure ideal for extremely high-head water applications in pressure washing, spraying systems, and reverse osmosis filtering. Bearings are permanently lubricated. Impeller is acetal. Motor is open dripproof (ODP) and rated for continuous duty. It has thermal overload protection, automatic reset, and screw terminals. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry or use with solids. Connections are ¾″ NPT female, unless noted. Maximum temperature is 140° F. Minimum temperature is not rated.

Self-Priming Polypropylene Centrifugal Pumps for Water

An initial fill of the pump casing creates a vacuum that allows these pumps to self-prime up to 25 feet. Also known as sprinkler pumps, they have high flow rates and high feet of head maximums for use with water in lawn and landscape sprinkling. Housing is fiberglass-reinforced polypropylene and impeller is Noryl. Motor is open dripproof (ODP), rated for continuous duty, and has screw terminals. Do not run dry or use with solids. Connections are NPT female. Maximum viscosity is not rated. Temperature range is 35° to 140° F. UL listed and CSA certified.

For information about pump performance, see pages 328 and 346.

Plastic Centrifugal Pumps with Adjustable Discharge

Direct flow in any direction—these pumps have a discharge that is adjustable in 90 degree increments. Motor is totally enclosed fan-cooled (TEFC), rated for continuous duty, and has screw terminals (115/230 VAC pumps have thermal overload protection). Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry or use with solids. Connections are 1½″ NPT female. Maximum viscosity is 18 centipoise (similar to antifreeze).

Polypropylene Housing—Impeller is polypropylene. Temperature range is 32° to 140° F.

Noryl Housing—Impeller is Noryl. Temperature range is 32° to 180° F.

Extended-Life Sealless Plastic Centrifugal Pumps

Also known as magnetic-drive pumps, these compact pumps have an impeller and motor joined by a magnetic coupling so there's no rubber seal to wear out, leading to longer pump life. Motor is rated for continuous duty and has thermal overload protection. Includes a 6-ft. cord with three-prong plug, unless noted. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry or use with solids. Maximum viscosity is 9 centipoise (similar to blood) for 9929K and 9925K pumps; maximum viscosity is 18 centipoise (similar to antifreeze) for 9930K and 99095K pumps. Temperature range is 32° to 150° F, and all pumps are UL recognized. *9929K* pumps are CSA certified and CE approved. *9925K* pumps are CSA certified.

● Has 6″ wire leads. ♠ Has 3-ft. cord with no plug. ▲ Housing and impeller are Ryton.

For information about pump performance, see pages 328 and 346.

Cast Iron Centrifugal Pumps for Coolant Tanks

A universal mounting plate makes these pumps the perfect replacement for coolant pumps from foreign manufacturers such as Fuji, Mitsubishi, Toshiba, Hitachi, and Yasukawa. Housing is cast iron. Impeller is polyacetal for pumps with 1/8 and 1/4 hp motors; impeller is aluminum for pumps with 1/2, 3/4, and 1 hp motors. Motor is totally enclosed with sealed bearings. Pumps must be hardwired. They are not self-priming. Connections are NPT female. Max. solid diameter is 1/8″. Max. viscosity is 88 centipoise (similar to olive oil). Temperature range is 50° to 180° F.

115/230 VAC pumps have 3″ wire leads; *230/460 VAC* pumps have screw terminals.

In-Tank Immersion Pumps—Intake is located below the mounting plate at the bottom of the shaft and is immersed in liquid. Pumps remove liquid down to 1″ above the intake. Discharge connection is above mounting plate. Pumps can be run dry.

Remote-Mount Pumps—These pumps let you connect a pipe from your tank to the pump intake for remote mounting in space-constrained areas. Mount above or below the liquid level for general service pumping of water-based coolants and light oils. Suction intake and discharge connections are located above the mounting plate on opposite sides of the housing. Do not run dry.

	Mounting Plate Size, Sq.	No. of Holes	Hole Size	Center-to-Center		Mounting Plate Size, Sq.	No. of Holes	Hole Size	Center-to-Center

Extended-Life Cast Iron Centrifugal Pumps for Coolant Tanks

Heavy duty bearings, impeller, and motor give these pumps a long service life, and a universal mounting plate easily connects to coolant reservoirs. Housing is cast iron; impeller is Type 316 stainless steel. Motor is totally enclosed fan-cooled (TEFC), continuous duty, and has 7″ wire leads. Pumps are not self-priming. They can run dry and will remove liquid down to about 2 1/4″. Maximum solid diameter is 1/4″. Intake is open; discharge connection is NPT female. Mounting plate is 9 1/2″ × 10 3/4″ and has four 5/16″ × 13/16″ holes on 8 5/8″ × 9 3/8″ centers. Maximum viscosity is 88 centipoise (similar to olive oil). Temperature range is 40° to 200° F.

High-Head Cast Iron Centrifugal Pumps for Coolant Tanks

Pumps have multiple stages to boost pressure—great for coolant delivery in machine tooling applications. Housing is cast iron. Impeller is polycarbonate. Motor is totally enclosed fan-cooled (TEFC), rated for continuous duty, and has 5″ wire leads and thermal overload protection. Pumps are not self-priming. Do not run dry or use with solids. Pumps will remove liquid down to 5″ above the inlet. Connections are 1″ NPT female. Maximum viscosity is 53 centipoise (similar to SAE 10 motor oil). Temperature range is 50° to 160° F.

Mount horizontally. Use the ***optional mounting plate*** for vertical mounting. Mounting plate has four 9/16″ holes on 5 61/64″ centers.

Extended-Life Sealless Centrifugal Pumps for Coolant Tanks

A sealless design means pumps have fewer wear components and longer life. Pump housing is glass-filled acetal. Motors are single phase, totally enclosed fan-cooled (TEFC), and rated for continuous duty. They have a 4-ft. power cord. Pumps are not self-priming but can be run dry. Pumps will remove liquid down to 1″ above the inlet. Max. solid diameter is 1/8″. Intake is open; discharge connection is slip-on for 5/8″ OD tubing. Mounting bracket has four 9/32″ holes on 4 1/2″ centers. Max. viscosity is 70 centipoise (similar to olive oil). Temperature range is 50° to 150° F.

115 VAC pumps have a three-prong plug. ***230 VAC*** pumps do not have a plug.

For information about pump performance, see pages 328 and 346.

Cast Iron Centrifugal Pumps for Circulating Water

A With Flange Mounting Adapters

B Without Flange Mounting Adapters

C

All pumps have a cast iron housing and a motor that is cooled by the pumped water, extending the life of the pump. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry or use with solids. All have 4″ wire leads.

(A) Compact—Ideal for heating applications, install these pumps in tight spaces in either a horizontal or vertical pipeline, but the motor must never point downward. Pumps have mounting flanges with two 1/2″ dia. holes. Flange mounting adapter is required. Impeller is glass-filled polypropylene. Temperature range is 40° to 230° F. UL and C-UL listed.

(B) Easy Maintenance—For heating and cooling applications, their split body design allows you to leave these pumps inline during repairs. Install in a horizontal or vertical pipeline. All pumps have mounting flanges with two 1/2″ dia. holes, unless noted. Flange mounting adapter is required for 6769K11 and 6769K12. Impeller is propylene, unless noted. Temperature range is 32° to 225° F.

(C) High Flow—A high horsepower motor powers these pumps to greater flow at higher pressures than other circulating pumps. Use in heating and cooling applications. Install in a horizontal or vertical pipeline, but the motor must never point downward. Pumps include mounting flanges with two 5/8″ dia. holes, unless noted. Impeller is Type 304 stainless steel. Temp. range is 5° to 284° F.

Flange mounting adapters (sold separately) are required for all 67705K pumps, plus 6769K11 and 6769K12. **To Order:** Please specify flange size: 3/4″, 1″, 1 1/4″, or 1 1/2″ NPT female.

▲ Mounting flange has four 3/4″ dia. holes.

Sealless Bronze Centrifugal Pumps for Circulating Water

NPT Male

Flanged, with Flange Mounting Adapters

Without a mechanical seal, these pumps have one less wear component for longer pump life. They are ideal for hot water circulation in heating applications. Housing is bronze. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Do not run dry or use with solids.

NPT male pumps have a separate Ryton/carbon/PTFE impeller and motor that are joined by a magnetic coupling. Mount in a vertical pipeline; electrical conduit box must be on the bottom. Pumps have a continuous-duty, air-cooled motor with thermal overload protection and 6″ wire leads. Temperature range is 36° to 250° F. UL recognized.

Flanged and ***solder-end*** pumps have an integrated motor and polypropylene impeller so that the motor is cooled by the liquid being pumped. Motor is continuous duty and has thermal overload protection and a 6-ft. cord with a three-prong plug. Mount in a vertical or horizontal pipeline. Temp. range is 40° to 203° F. CE and ETL listed. *Flanged* pumps have NPT female connections.

Flange mounting adapters (sold separately) are required for flanged pumps. They have a 3/4″ NPT female connection and two 1/2″ mounting holes on a 3 1/8″ center.

Ultra-Quiet Sealless Centrifugal Pumps for Circulating Water

Nylon

Type 316 Stainless Steel

Quiet and compact, these pumps have a sealless but leakproof motor. The motor and pump end are integrated so that the motor bearings are lubricated by the liquid being pumped. Impeller is polypropylene. Motor is continuous duty with thermal overload protection and a quick-disconnect terminal. Pumps are not self-priming—they must be placed at or below the level of liquid being pumped. Mount in horizontal or vertical pipeline, but motor must always be below the impeller. Do not run dry or use with solids. CE and ETL listed.

Nylon Housing—Connections are NPT male. Temperature range is 40° to 140° F.

Type 316 Stainless Steel Housing—Connections are NPT female. Temperature range is 40° to 203° F.

About Jet and Vacuum Pumps

Jet and vacuum pumps produce a negative, or below atmospheric, pressure condition (vacuum) in a vessel or tank.

Jet pumps use high-pressure liquid or steam to create strong suction within the pump body. They're often used to mix fluids, but they can even be used to move grains and other solid granular material. ***Venturi pumps*** operate under the same principles as jet pumps, but use compressed air instead of liquid or steam. They're ideal for medium- to high-vacuum applications

Electric vacuum pumps operate on electricity and can create a near-perfect vacuum.

Free air is the initial pull needed to create a vacuum. The vessel size and how quickly the vacuum level needs to be reached will determine the flow the pump needs to generate. Estimate how long it will take to form a vacuum by dividing the tank capacity by the cfm of the pump. Forming a vacuum in a large tank will take longer than in a small tank when using a comparable pump.

Note: Tubing and fitting ID sizes also affect flow through the pump.

Standard vacuum is measured in inches of mercury (Hg) up to 29″ Hg. It is suitable for light lifting, grabbing, and moving parts. High or deep vacuum is up to 29.9″ Hg. Extreme vacuum is beyond 29.9″ Hg and is measured in microns of Hg. It is often needed in refrigeration service. (1 micron = 1/1,000 of a millimeter.)

Jet Pumps

Maintenance-Free Jet Pumps

Also known as eductors, ejectors, and injectors, jet pumps have no moving parts and require no lubrication, seals, or electricity, so they are easy to clean and maintain. They use high-pressure liquid or steam (attached at the inlet) to create suction within the pump body. This suction draws a second liquid or gas into the pump and then forces it out, under pressure, through the discharge. Discharge occurs at a pressure greater than the suction stream, but lower than the operating inlet media. Decibel rating is 85. All have a temp. range of –150° to +150° F, except the PVC pumps, which have a max. temperature of +70° F.

Cast Iron— For general purpose applications.
Bronze— More corrosion resistant than cast iron.
Type 316 Stainless Steel— Highly corrosion resistant.
PVC— Highly corrosion resistant and lightweight.

Liquid-Operated Pumps— Use to blend liquids and slurries, circulate and pump solutions, handle condensate, extract solvents, produce emulsions, and elevate water. *Cast iron* pumps operate on pressures up to 75 psi; *bronze* and *Type 316 stainless steel* pumps operate on 15 to 200 psi inlet pressure; *PVC* pumps operate on pressure up to 100 psi. All have suction lift up to 27 feet at a rate of 1 foot per 2 psi of inlet pressure.

Steam-Operated Pumps— Use plant steam to pump liquids and gases, prime pumps, and develop a vacuum.

For pumping liquids: Inlet pressure range is 35 to 150 psi. Pumps have a suction lift up to 20 feet at a rate of 1 foot per 1½ psi of inlet pressure.

For pumping air, vapor, and gases: Use for priming and air removal with steam or air at inlet pressures from 20 to 80 psi.

Suction Flow (Based on a 1½″ Suction/Discharge Pipe Size)

These charts show suction flow based on a 1½″ suction/discharge pipe size. To determine the suction flow for other pipe sizes, use the sizing factor given below as a multiplier. For example, a pump with a 40-ft. discharge head, 5-ft. lift, and 100 psi water pressure, has a suction flow of 22 gpm (from information below; based on 1½″ suction/discharge). For the suction flow of a pump with 1¼″ suction/discharge, multiply 22 gpm by the 0.61 sizing factor to get 13.4 gpm.

For Liquid-Operated Pumps

● PVC pumps have NPT female inlet and suction connections and NPT male discharge connections.

Note: Steam-operated pumps are not available in PVC because of temperature and pressure limitations.

For information about vacuum pumps, see page 363.

Maintenance-Free Vacuum Pumps

Also known as vacuum generators, these compressed-air powered pumps are easy to install and maintain because they have no moving parts or seals and don't require electricity or lubrication. Plus, they're compact, lightweight and have a silencer to reduce noise level.

Single Stage—Use for low airflow or as an intermittent vacuum source. All have an aluminum housing. *Adjustable-flow* pumps have a rotating diffuser section that adjusts flow.

Multistage—Generate higher vacuum flow with less air consumption. They have an acetal housing and include a 2″ vacuum gauge.

Oil-Free Electric Vacuum Pumps with Tank

These ready-to-use systems come with a rotary vane pump already mounted on a 10-gal. ASME coded tank. Pumps also have oil-free exhaust and include a vacuum gauge and manual shut-off valve. A three-position vacuum switch allows for on/off continuous duty or automatic on/off at a set vacuum. Supplied with external/internal air filters. Housing is cast iron. Vanes are carbon. Inlet and discharge connections are barbed for 3/8″ tube ID. Motors have thermal overload protection. Decibel rating is 70. Pumps are factory wired to 115 VAC. They include a 6-ft. cord with three-prong plug. Max. temperature is 95° F. Min. temperature is not rated.

Max. Vacuum, Hg	Free Air, cfm	hp	VAC @ 60 Hz (phase)	Amps	Overall Size, Lg.×Wd.×Ht.		Each
26″	4.6	1/3	115/230 (1)	5.3/2.7	30″×11″×20 1/2″	**6419K11**	$2,281.34

Hand-Held Vacuum/Pressure Pump

Just squeeze the trigger to create a vacuum—this pump has a pistol-grip pump head for single-handed manual operation. Use for liquid transfer and pickup and integrity checks of hydraulic vacuum and liquid lines. Housing is zinc and aluminum. Temperature range is 40° to 190° F. Overall size is 7″ Lg.× 2″ Wd.×9 1/4″ Ht.

Pump includes two 2-ft. long pieces, one 1 1/2″ piece, and one 3 5/8″ piece of 1/4″ ID PVC tubing; one 3″ piece of 5/32″ ID PVC tubing; a vacuum/pressure gauge; tubing adapters; a 4.5-oz. reservoir jar; tapered adapters and plugs; and a Santoprene cup adapter.

Max. Vacuum, Hg	Stroke Volume	Max. psi		Each
25″	1 cu. in.	15	**9963K21**	$78.47

Oil-Free Electric Vacuum/Pressure Pumps

Wear Resistant

Portable

These easy-to-use pumps run on electricity and require no lubrication—discharge is oil-free. All have a continuous-duty motor with thermal overload protection and a 6-ft. cord with three-prong plug.

Wear Resistant—Has a coiled diaphragm to reduce stress and wear and improve flexibility. Ideal for air and gas sampling and pressure/vacuum filtration. Housing is glass-filled polyester and diaphragm is fluorocarbon elastomer. Includes two polyethylene 3/8″ NPT male×3/8″ barbed hose adapters for 3/8″ ID tubing. Temperature range is 41° to 95° F.

Portable—Weighing only 16 pounds, this easy-to-carry pump is compact and quiet. Housing is aluminum and diaphragm is Nordel/Nomex. Pump includes an on/off switch and rubber feet. Connections are barbed for use with 3/8″ ID tubing. Temperature range is 32° to 104° F.

	Max. Vacuum, Hg	Free Air, cfm	Max. psi	dB Rating	hp	VAC @ 60 Hz (phase)	Amps	Overall Size, Lg.×Wd.×Ht.		Each
Wear Resistant	23″	0.54	21	72	1/45	115 (1)	1.2	8″ × 4″ × 5 1/2″	**41675K41**	$243.97

For information about vacuum pumps, see page 363.

Oil-Free Electric High-Vacuum Pumps

Requiring no lubrication, these pumps have an oil-free discharge but still provide lots of power for high-vacuum applications. All have a continuous-duty motor with thermal overload protection and a 10-ft. cord with three-prong plug, unless noted. Intake and discharge connections are NPT female. Temperature range is 32° to 104° F.

Style A— Rotary vanes adjust as they wear so pump maintains efficiency and constant vacuum. Includes a relief valve, filter, felt elements, and an internal muffler. Housing is cast iron. Maximum air pressure is 10 psi. CSA certified.

Style B— Pistons achieve high vacuum and withstand harsh operating conditions. Housing is aluminum. Maximum air pressure is 125 psi. CSA certified.

	Max. Vacuum, Hg	Free Air, cfm	dB Rating	hp	VAC @ 60 Hz (phase)	Amps	Pipe Size	Overall Size, Lg.×Wd.×Ht.		Each

▲ Has 8″ wire leads.

Extended-Life Oil-Free Electric High-Vacuum Pumps

Also known as liquid-ring vacuum pumps, these have a design that eliminates metal-to-metal contact, extending the life of the pump and producing vacuum up to 29″ Hg. As their impeller rotates, sealing fluid (usually water) is forced outward to form a ring that produces a medium vacuum. Pumps do not require oil, but do require a constant supply of water to operate. Housing is cast iron and impeller is bronze. Motor is continuous duty; three phase; operates on 220-275/380-480 VAC, 60 Hz; and has thermal overload protection and screw terminals. Temperature range is 32° to 120° F. CSA certified.

● Flange has four ¾″ holes on 3″ bolt circle.

Compact Electric Extreme-Vacuum Pumps

Turn to these direct-drive pumps when you need to produce a high vacuum. Pumps have a two-stage design for a higher vacuum than single-stage designs. They have no belts to wear out and are equipped with an oil level sight window and on/off switch. All have a carrying handle. Motors are continuous duty and have thermal overload protection. For replacement vacuum pump oil, see page 2176.

(C) 15 Microns Maximum Vacuum— Housed in aluminum, these pumps are great for air conditioning, refrigeration, and freezer-system servicing. Pumps come with one quart of vacuum oil. *115 VAC* units have a 6-ft. cord with a standard three-prong plug. *115/230 VAC* units are wired for 230 VAC and have a 6-ft. cord with three-prong NEMA 6-15 plug. Maximum temperature is 150° F. Minimum temperature is not rated.

Intake ports have male flared fitting connections. *3-cfm* models have a ⅜″ male flare × ¼″ male flare tee tube fitting. *5-* , *7-* , and *10-cfm* models have a ½″ male flare × ⅜″ male flare × ¼″ male flare cross tube fitting.

(D) 0.4 and 0.1 Microns Maximum Vacuum— For even greater vacuum, choose these cast iron pumps. Supplied with vacuum oil and a hose adapter. Pumps come wired for 115 VAC and have an 8-ft. cord with three-prong plug. Temperature range is 50° to 104° F. CSA certified.

★ VAC @ 50/60 Hz.

Extended-Life Electric Extreme-Vacuum Pumps

Cooler running and more rugged than direct-drive models, these pumps have a flexible belt that connects the pump head to the motor. They have a cast iron housing, large-capacity oil reservoir, and pull down to a maximum vacuum of 0.1 microns. Ideal for refrigeration service, vacuum ovens, and furnaces, as well as for removing gases from oils, plastics, and epoxies. Equipped with a fully enclosed belt guard, adjustable gas ballast, dust cap, switch, one quart of vacuum oil for 9950K51, and three quarts of vacuum oil for 9950K52 and K53 (for replacement vacuum pump oil, see page 2176). Decibel rating is 65. Motors are continuous duty and have a 7½-ft. cord with three-prong plug. Temperature range is 50° to 104° F. CSA certified.

For information about pipe size, see pages 2-3.

About Noise, Filtration, and Flow Ratings

Consider noise, filtration, and flow ratings when selecting mufflers, breather vents, and filters.

Noise—Measured in decibels (dB), the rating indicates how much a product reduces exhaust noise from your tool or equipment. OSHA recommends hearing protection for exposure to 80 dB and greater. Some common noise levels include an air-powered riveter @ 125 dB, air-powered drill @ 120 dB, and an impact wrench @ 103 dB.

Filtration—Products trap particles to clean the air exhausting to the environment or going into your process and equipment. The size of particles is measured in microns; the lower the number of microns, the smaller the particles that are removed from the air. For examples of common particle sizes, see page 390.

Flow—Measured in standard cubic feet per minute (scfm), this rating is the maximum air flow a product can withstand.

Mufflers

A **B** **C** **D**

Our most popular mufflers, use these with air-powered tools, valves, and cylinders to reduce noise and filter exhaust air. All have a porous bronze body.

Styles A&D have hex wrench flats. Mufflers reduce noise by 15-20 dB. They trap particles down to 40 microns, except mufflers with 1¼-2 pipe size, which trap particles down to 90 microns. Use with air and inert gas. Fitting is plated steel. Max. temp. is 300° F.

Style B are high temperature; max. temp. is 500° F. They have a slotted head for installation with a screwdriver. Mufflers reduce noise by 10-20 dB and trap particles down to 100 microns. Use with air and inert gas. Fitting is porous bronze.

Style C are knurled for an easy grip. Mufflers reduce noise by 13-21 dB and trap particles down to 100 microns. Use with air. Fitting is plated bronze. Max. temp. is 302° F.

Corrosion-Resistant Mufflers

E&G

All-stainless construction stands up to harsh environments—body is porous Type 316 stainless steel. Use with air and inert gas.

High-temperature mufflers withstand temperatures up to 400° F. They reduce noise by 15-20 dB and trap particles down to 50 microns. Fitting is Type 304 stainless steel. Max. pressure is 175 psi.

Extreme-temperature mufflers withstand temperatures up to 1000° F. They trap particles down to 100 microns. Fitting is Type 316 stainless steel. Max. pressure is 150 psi. *Style F* reduce noise by 10-20 dB; *Style G* reduce noise by 13-29 dB.

Sure-Seal Miniature Mufflers

H

A rubber O-ring above the threads ensures a tight seal. Mufflers reduce noise by 17-22 dB and trap particles down to 40 microns. Use with air and inert gas. Connection is UNF male.

Styles H&J have a porous bronze body with a brass fitting. O-ring is Buna-N. Max. pressure is 125 psi. Max. temp. is 200° F.

Style K has a porous Type 316 stainless steel body with a Type 303 stainless steel fitting. O-ring is fluoroelastomer. Max. pressure is 300 psi. Max. temp. is 300° F.

Flow-Control Mufflers

Adjust the speed of air-powered tools and cylinders—turn the screw to change air flow and tighten the nut to secure. Mufflers reduce noise by 17-20 dB and trap particles down to 40 microns. Use with air and inert gas. Body is porous bronze and fitting is brass. Max. pressure is 300 psi. Max. temp. is 300° F. Connections are NPT male.

For information about mufflers, see page 366. For information about pipe size, see pages 2-3.

Push-to-Connect Mufflers

Decrease noise from manifolds with tubing connections—these have an unthreaded stem to slide into tube fittings and collets. Use with air. Filtration is not rated.

Plastic mufflers are more corrosion resistant than bronze. They reduce noise by 17-20 dB. Max. pressure is 145 psi. Max. temp. is 140°F.

Bronze mufflers withstand higher temperatures than plastic; max. temp. is 300°F. They reduce noise by 20 dB. Body is porous bronze and fitting is nickel-plated brass. Max. pressure is 175 psi.

Mufflers for Tubing

Make the right connection in applications that use tubing. Use with air. Mufflers have a porous bronze body.

Muffler with barbed fitting is for use with soft tubing. It reduces noise by 10-20 dB and traps particles down to 80 microns. Fitting is copper. Max. pressure is 170 psi. Max. temp. is 500°F.

Muffler with push-to-connect fitting is for use with semi-rigid tubing such as nylon, polyurethane, and FEP. It reduces noise by up to 16 dB. Filtration is not rated. Fitting is bronze. Max. pressure is 145 psi. Max. temp. is 140°F.

Clog-Resistant Mufflers

Replace your muffler less often—these have a filter design that stays clean longer than porous mufflers. They're often used in air-powered circuits.

Style A— A screw on top adjusts air flow. Mufflers reduce noise by 12-15 dB and trap particles down to 900 microns. Max. pressure is 150 psi. Max. temp. is 400°F.

Styles B&C— Mufflers reduce noise by 17-20 dB and trap particles down to 250 microns. Filter is wire mesh. ***Aluminum mufflers*** have a max. pressure of 300 psi. Max. temp. is 160°F. ***Nylon mufflers*** have a max. pressure of 150 psi. Max. temp. is 120°F.

Clog-Indicating Mufflers

Don't let an unexpected clog interrupt your work. These mufflers have a filter that slides up slowly as it clogs to indicate when the muffler should be replaced. Mufflers reduce noise by 30-35 dB and trap particles down to 70 microns. Use with air. Filter and fitting are plastic. Max. pressure is 100 psi. Max. temp. is 158°F. Max. scfm is not rated. Connection is NPT male.

Flame-Resistant High Noise-Reducing Mufflers

Suitable for use with welding equipment, these mufflers are made of flame-resistant materials and reduce noise by 35-42 dB. They trap particles down to 100 microns. Use with air. Filter is PVF (polyvinyl fluoride) and fitting is PBT (polybutylene terephthalate). Max. pressure is 145 psi. Max. temp. is 140°F. Connection is NPT male.

High-Flow Mufflers

With Male Connection

Install a muffler that reduces noise without restricting air flow. Commonly used with high-flow air-powered equipment, such as diaphragm pumps and valves. Mufflers reduce noise by 17-22 dB and trap particles down to 5 microns. Use with air and inert gas. Housing is aluminum and stainless steel; filter is cellulose fiber. Max. pressure is 125 psi. Max. temp. is 290° F.

Oil-Mist-Recycling Mufflers

With Female Connection

Capture oil mist for reuse. Also known as reclassifiers, mufflers have a clear reservoir with a drain plug to hold and remove oil. They reduce noise by 35 dB and trap particles down to 0.3 micron. Use with air. Housing is aluminum and steel; filter is PET (polyethylene terephthalate). Reservoir is plastic. Max. pressure is 15 psi. Max. temp. is 140° F. Mufflers must be mounted vertically.

Parts-Ejecting End-Exhaust Mufflers

Use air to eject items from your conveyor—mufflers exhaust through narrow holes to provide a concentrated blast. They're also good for directing exhaust away from delicate applications. Mufflers reduce noise by up to 21 dB. Filtration is not rated. Use with air and inert gas. Body is steel and filter is acetal. Max. pressure is 175 psi. Max. temp. is 300° F. Connection is NPT male.

Oil-Mist-Eliminating Mufflers

With Male Connection

Keep oil mist under control. In addition to a cellulose fiber filter, these mufflers have a wool felt disc to trap oil. Often used with vacuum pumps and suction devices, they reduce noise by 17-23 dB without restricting flow. Mufflers trap particles down to 5 microns. Use with air and inert gas. Housing is aluminum and stainless steel. Max. pressure is 150 psi. Max. temp. is 290° F.

Easy-to-Clean Mufflers

A

B

C

Get more from your muffler—these can be cleaned for an extended service life. Mufflers reduce noise by 20-30 dB. Use with air and inert gas. Max. pressure is 150 psi. Connection is NPT male.

Style A trap particles down to 80 microns. Body and filter are polyethylene. Max. temp. is 150° F.

Styles B&C trap particles down to 75 microns. Body is glass-filled polypropylene. Max. temp. is 175° F.

To Order: For *Styles B&C*, please specify filter material: polyethylene, brass, or stainless steel.

Tank Flame Arresters

Minimize fire hazard from flammable vapors. Mount an arrester to your vent pipe to stop flames from traveling back into your tank. If the ambient temperature reaches 165° F, fusible links melt, and the cover closes to block flames from the arrester. To reuse the arrester, replace the fusible links (sold separately). Flame arrester is cast iron and aluminum. It's UL listed. Connection is 2 NPT female.

Tank Flame Arrester	1206K81	$626.67
Replacement Fusible Link	1206K85	8.00

For information about mufflers and vents, see page 366. For information about pipe size, see pages 2-3.

High-Flow Inline Mufflers

Maintain air flow while reducing exhaust noise from diaphragm pumps, valves, and other air-powered equipment. Mufflers reduce noise by 17-22 dB and trap particles down to 5 microns. Use with air and inert gas. Housing is aluminum and stainless steel; filter is cellulose fiber. Max. pressure is 125 psi. Max. temp. is 290° F. Connections are NPT male.

Heavy Duty Inline Mufflers

With Male Connections

Heavy duty steel construction provides durability for rugged environments. Mufflers have layered polyester packing to reduce noise by up to 30 dB with minimal pressure drop. They're ideal for large blowers, compressors, and vacuum pumps. Use with air and inert gas. Filtration is not rated. Max. temp. is 212° F. Max. pressure is not rated.

Inline Mufflers for High-Frequency Noise

Designed to minimize noise from rotary and centrifugal blowers, vacuum pumps, and low-pressure vents, these mufflers reduce noise by up to 45 dB with minimal pressure drop. Use with air and inert gas. Filtration is not rated. Mufflers have a steel body and thick polywool packing. Max. pressure is 15 psi. Max. temp. is 325° F. Connections are NPT female.

For information about vents, see page 366. For information about pipe size, see pages 2-3.

Moisture-Eliminating Breather Vents

Keep rust and corrosion from forming inside your tank—vents contain silica gel that absorbs moisture. They also trap particles down to 3 microns. Use with air and inert gas. Body is nylon and clear polycarbonate; filter is polyester. Replace vents when the silica gel reaches maximum absorption, changing from blue to pink. Max. flow is 16 scfm @ 1 psi. Max. pressure is not rated. Max. temp. is 200° F. Connection is NPT male.

Pipe Size	For Tank Size, gals.	Ht.	Dia.

1	5 to 500	10 1/8"	4"	3297T35	85.86

Weather-Resistant Breather Vents

Shield outdoor pipe and tank openings from the environment. Also known as vent caps, these have screens to allow air flow while blocking debris. Use with air. Flow, pressure, and temperature are not rated.

Style A trap particles down to 140 microns. Screen is Type 304 stainless steel 100 mesh.

Style B trap particles down to 880 microns. Screen is Type 304 stainless steel 30 mesh.

Style C have two outlets for greater flow. They trap particles down to 1,190 microns. Screen is brass 16 mesh.

Style D have a set screw to secure in place. Screen is zinc-plated steel with 1/8" perforations. Filtration is not rated.

Breather Vents with Splash Guard

Steel

Polyamide

Vent oil containers for easier dispensing—a guard blocks splashing oil from the vent to prevent clogs. Ideal for containers that are often filled and drained. Max. flow is not rated. Connection is NPT male.

Steel vents have a max. pressure of 125 psi. Max. temp. is 400° F. Filtration is not rated.

Polyamide vents trap particles down to 40 microns. Max. pressure is not rated. Max. temp. is 210° F.

Submersible Breather Vents

Polycarbonate

Aluminum

Stainless Steel

Rated NEMA 6 to withstand periodic submersion in water, install these vents in enclosures to stop the build up of pressure and vacuum. They trap particles down to 3 microns. Use with air. Filter is acrylic. Max. flow is not rated. Max. pressure is 4 psi. Max. temp. is 158° F. Vents are also for use with enclosures that are rated NEMA 4, 12, and 13 for washdown environments and splashing oil and coolant. Connection is male.

Self-Draining Breather Vents

Minimize moisture buildup in enclosures. Also known as drain plugs, these have a small outlet that allows condensation to drain. Vents also have a silicone O-ring above the threads for a tight seal. Use with air. Filter is porous bronze. Max. flow and pressure are not rated. Max. temp. is 320° F. Install at the lowest point of the enclosure. Vents meet IP66 for protection from dust and washdown environments. Connection is NPT male.

Breather Vents with Lockable Cap

Secure access to vented openings in pipe and tanks—the cap can be locked to prevent tampering; it accepts a padlock (not included) with a 3/8" shackle diameter. Use with water and air. Body and cover are aluminum; screen is brass. Max. flow and pressure are not rated. Max. temp. is 200° F. Connection is NPT male.

Pipe Size	Ht.	Dia.		
2	4 1/2"	5 5/8"	4906K11	$34.30

Flange-Mount Breather Vents with Cap

Nylon

Stainless Steel

Lockable Stainless Steel

Add a convenient filling port to your hydraulic tank while also protecting against excess pressure and vacuum. Vents also stop dirt from entering your tank; they trap particles down to 40 microns. Use with oil and air. Max. pressure is not rated. Mount on top of standard tank openings with included hardware. Flange has six 3/16" bolt holes; bolt hole circle is 2 7/8".

Lockable stainless steel vent prevents tampering; it accepts a padlock (not included) with a 3/8" shackle diameter.

For information about filters, see page 366. For information about pipe size, see pages 2-3.

Air-Intake Filters

Stop dust and other contaminants from entering your process and equipment. These air-intake filters come with a polyester element that removes 99% of particles down to 5 microns. They're commonly used on blowers, compressors, engines, and in hydraulic systems. Use with air and inert gas. Filters have a steel housing. Max. temp. is 220° F. 4399K33 has a larger element than 4399K48 for greater dirt-holding capacity.

Filters with silencer reduce intake noise by up to 15 dB while maximizing air flow.

Replacement elements are sold separately. *Polyester elements* remove 99% of particles down to 5 microns. *Paper elements* remove 99% of particles down to 2 microns. *HEPA elements* have greater efficiency for high-purity applications. They remove 99.9% of particles down to 0.3 micron but reduce the max. scfm of your filter.

Compact Air-Intake Filters

Clean the air going into small blowers and air-powered equipment in tight spaces. Use with air and inert gas. Max. temp. is 220° F. Connection is NPT male.

Filters without silencer remove 99% of particles down to 5 microns. Element is polyester. Filters do not have a housing.

Filters with silencer reduce intake noise by up to 15 dB. They remove 99% of particles down to 2 microns. Housing is steel; element is paper.

For information about filters, see page 366. For information about pipe size, see pages 2-3.

Corrosion-Resistant Air-Intake Filters

The polypropylene housing withstands damp environments and is impact resistant. Filters come with a polyester element that removes 99% of particles down to 10 microns. Use with air and inert gas. Max. temp. is 200° F. Connection is NPT male.

Filters with silencer reduce noise by up to 10 dB.

Replacement elements are sold separately. They remove 99% of particles down to 10 microns. *Polyester elements* have 50% more dust-holding capacity than paper.

Vacuum Filters

Female Connections

Ensure clean air going in and coming out of vacuum pumps. Housing is steel. Max. temp. is 220° F. Connections are NPT.

For Air Intake— Install these on the inlet to stop dust from entering your system. They come with a polyester element that removes 99% of particles down to 5 microns. Use with air and inert gas. Max. vacuum is 29.9" Hg. Inlet is on the side and outlet is on the bottom.

Replacement elements for air intake are sold separately. *Polyester elements* remove 99% of particles down to 5 microns. *Paper elements* remove 99% of particles down to 2 microns. *HEPA elements* have greater efficiency for high-purity applications. They remove 99.9% of particles down to 0.3 micron but reduce the max. scfm of your filter.

For Air Exhaust— Install these on the outlet to prevent oil mist from escaping into your environment. They come with a fiberglass element that removes particles down to 0.3 micron. Use with air. Inlet is on the bottom and outlet is on the side. *Filters with 1 and 1 1/2 pipe size* have a max. pressure of 3 psi; *2 pipe size* has a max. pressure of 14.7 psi.

Replacement elements for air exhaust are sold separately. They are fiberglass and remove particles down to 0.3 micron.

■ Element is fiberglass.

High-Flow Vacuum Filters

Accommodate the flow capacity of large pipe for air and inert gas. Filters remove particles down to 5 microns. Housing is aluminum and steel; element is polyester. Max. vacuum is 29.9" Hg. Max. temp. is 220° F. Connections are NPT female. 9825K11 is 13" Ht. × 9" Dia.; 9825K14 is 18 7/8" Ht. × 13 1/2" Dia.

Pipe Size	Max. scfm @ 14.7 psi	Filters	Replacement Element
2	175	9825K11 $415.60	5169K93 $42.85
4	520	9825K14 692.67	4399K55 69.25

Extended-Life Vacuum Filters

Spend less time on maintenance. These filters combine the long service life of a durable steel housing with high dirt-holding capacity. They remove particles down to 10 microns. Use with air and inert gas. Element is polyester. Max. vacuum is 29.9" Hg. Max. temp. is 200° F. Filters are 12 3/4" Ht. × 3 5/8" Dia. Connections are NPT female.

Pipe Size	Max. scfm @ 14.7 psi	Filters	Replacement Element
1/2	15	4392K51 $304.20	4392K41 $59.62
3/4	26	4392K52 309.40	4392K41 59.62
1	40	4392K53 314.78	4392K41 59.62

Easy-View Vacuum Filters

Monitor the amount of debris in your filter—housing is clear polypropylene. Filters remove particles down to 50 microns. Use with air, inert gas, and water. Element is Type 304 stainless steel. Max. vacuum is 29.9" Hg. Max. temp. is 125° F. Connections are NPT female. 6201K7 is 9 1/4" Ht. × 5 1/2" Dia.; 6201K8 is 14 1/8" Ht. × 5 1/2" Dia.

Pipe Size	Max. scfm @ 14.7 psi	Filters	Replacement Element
3/4	4	6201K7 $130.98	6201K5 $45.98
3/4	15	6201K8 153.60	6201K6 53.86

Miniature Vacuum Filters

Use one of these filters in a tight spot or combine up to ten for a manifold application. They remove particles down to 30 microns. Use with air and nitrogen. Housing is aluminum; element is polyester. Max. vacuum is 29.8" Hg. Max. temp. is 140° F. Connections are NPT female. 6689K36 is 2 3/4" Lg. × 11/16" Wd.; 6689K37 is 2 3/4" Lg. × 1 1/8" Wd.

Pipe Size	Max. scfm @ 14.7 psi	Filters	Replacement Element
1/8	1.8	6689K36 $31.75	6689K39 $10.07
1/4	7.1	6689K37 38.12	6689K41 10.90

For information about pipe size, see pages 2-3.

About Strainers and Selecting Screen Size

Install strainers before valves, pumps, and instrumentation to prevent damage from debris in your pipeline. They have a screen that is sized to trap the particles you wish to remove. Unthread the plug to clear debris without detaching pipe connections.

Selecting Screen Size

For Small or Medium Particles—Strainers have screens made of wire cloth. Screen size is determined by mesh size, which is the number of openings in a linear inch of the screen. For more information about wire cloth and mesh size, see page 409. ***20 mesh*** traps medium particles. It is the most commonly used screen size and is considered the industry standard.

For Large Particles—Strainers have screens made of perforated metal. Screen size is determined by perforation size, which is the actual diameter of the holes in the screen. Perforated screens are more rigid and durable than mesh screens for a longer service life in harsh environments. They are also good for maintaining flow when straining thick liquids.

Common Particle Sizes and Corresponding Screen Sizes

Bronze Y-Strainers

- Max. Pressure: Water, Oil, Inert Gas, and Diesel Fuel: 200 psi @ 70° F
  Steam: 125 psi @ 400° F
- Temp. Range: –20° to 400° F

Safeguard against damage to valves, pumps, nozzles, and steam traps from debris in your pipeline. Body is bronze and screen is Type 304 stainless steel. Connections are NPT female.

To Order: For *small and large particles*, please specify screen size: mesh or perforations.

Bronze Y-Strainers with Magnetic Plug

- Max. Pressure:
  Water, Oil, Inert Gas, Acetone, and Diesel Fuel: 400 psi @ 70° F
  Steam: 235 psi @ 400° F
- Temp. Range: –20° to 400° F

Catch small ferrous particles—strainers have a magnet in the plug and a 40 mesh screen. Body is bronze and screen is Type 304 stainless steel. Connections are NPT female.

Pipe Size	Lg.	Ht.	Plug Pipe Size	Strainer		Replacement Screen	
1	4 1/8″	4 1/16″	1/4	4495K43	$214.17	4385K25	$35.71

Bronze Y-Strainers for Drinking Water

- Max. Pressure: 400 psi @ 70° F
- Temp. Range: 33° to 100° F

Trap and remove debris from pipelines. Strainers are for use with drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012. Screen size is 40 mesh. Body is bronze and screen is Type 304 stainless steel. Connections are NPT female.

Pipe Size	Lg.	Ht.	Plug Pipe Size		
1/2	3 7/8″	4″	1/2	4547K332	$117.17

High-Pressure Stainless Steel Y-Strainers

- Max. Pressure:
  High Pressure: Water, Oil, Inert Gas, Natural Gas, and Diesel Fuel: 1,400 psi @ 70° F
  Steam: 600 psi @ 1125° F
  Extreme Pressure:
  Water, Oil, and Diesel Fuel: 3,000 psi @ 70° F
  Steam: Not Rated
- Temp. Range:
  High Pressure: 33° to 1125° F
  Extreme Pressure: –20° to 450° F

Get exceptional corrosion resistance in a strainer built to withstand high pressure. Body is Type 316 stainless steel and screen is Type 304 stainless steel. Connections are NPT female.

To Order: Please specify screen size: mesh or perforations.

Bronze Y-Strainers with Solder-End Connections

- Max. Pressure:
  Water, Oil, Inert Gas, Acetone, and Diesel Fuel: 400 psi @ 70° F
  Steam: 235 psi @ 400° F
- Temp. Range: –20° to 400° F

Block debris in applications that use copper tubing—connections are solder end (unthreaded) female. Body is bronze and screen is Type 304 stainless steel.

To Order: Please specify screen size: 20 or 40 mesh.

Tube Size★	Actual Tube OD	Lg.	Ht.	Plug Pipe Size	Strainer		Replacement Screen	
3/4"	7/8"	3"	2 7/8"	1/8	44125K44	$76.25	44125K74	$28.22

1 1/2"	1 5/8"	4 7/8"	4 3/4"	3/8	44125K47	182.47	44125K77	67.75

★ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

Compact Bronze T-Strainers

- Max. Pressure: Water: 250 psi @ 70° F
- Temp. Range: 32° to 180° F

With a smaller overall size than Y-strainers of the same pipe size, these are well suited to applications in close quarters. Body is bronze and screen is Type 304 stainless steel. Unthread the retainer cap to remove debris. Connections are NPT female.

To Order: Please specify screen size: 40 or 100 mesh.

Pipe Size	Lg.	Ht.	Strainer		Replacement Screen	
1/4	2 1/16"	1 11/16"	9998K32	$32.24	9998K22	$11.87

1/2	2 3/4"	2 5/8"	9998K34	46.62	9998K24	22.52

For information about strainers, see page 373. For information about pipe size, see pages 2-3.

Flanged Y-Strainers

- Max. Pressure for Water, Oil, Inert Gas, Acetone, and Diesel Fuel:
  Cast Iron: 200 psi @ 70° F
  Type 316 Stainless Steel: 275 psi @ 70° F
  Max. Pressure for Steam:
  Cast Iron: 125 psi @ 450° F
  Type 316 Stainless Steel: 150 psi @ 565° F
- Temp. Range:
  Cast Iron: –20° to 450° F
  Type 316 Stainless Steel: –20° to 565° F

Trap debris in high-flow lines with flanged pipe connections. Bolt strainers between two flanges of the same pipe size. Screen is Type 304 stainless steel.

Type 316 stainless steel strainers are more corrosion resistant than cast iron.

To Order: Please specify screen perforation size from those listed in the table.

Bronze Inline Strainers

- Max. Pressure for Water, Oil, and Inert Gas: 250 psi @ 70° F
- Temp. Range: 32° to 180° F

Use these strainers in place of regular fittings to catch debris in your pipelines. A union fitting on one end allows you to remove debris without detaching the pipe connection. Screen size is 40 mesh. Body is bronze, screen is Type 304 stainless steel, and seal is Buna-N. Connections are NPT female.

Pipe Size	Lg.	Strainer		Replacement Screen	
3/4	4 3/8"	5166K66	$89.74	5166K53	$10.31
1	4 3/8"	5166K67	99.06	5166K53	10.31

High-Pressure Brass Inline Strainers

- Max. Pressure for Water, Oil, and Diesel Fuel: 500 psi @ 70° F
- Temp. Range: 32° to 180° F

Catch small particles in pipelines with pressures up to 500 psi. Body is brass and screen is Monel. Connections are NPT female.

To Order: Please specify screen size: 100 or 200 mesh.

Pipe Size	Lg.	Strainer		Replacement Screen	
1/8	2 5/8"	9802K5	$14.08	9802K9	$7.02

Temporary Pipeline Strainers

- Max. Pressure for Water, Oil, Inert Gas, Acetone, and Diesel Fuel: 285 psi @ 100° F
- Temp. Range: –45° to 800° F

Remove debris from new pipelines before installing equipment. Sandwich strainers between two flanges with the cone pointing in the direction of flow. Screen has 1/8" perforations. Body and screen are Type 304 stainless steel.

Polypropylene Y-Strainers

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: –20° to 150° F

Match the material of the pipe and fittings in your polypropylene system. Body is black fiberglass-reinforced polypropylene, screen is Type 316 stainless steel, and seal is EPDM. Connections are NPT female.

To Order: Please specify screen size: For 1/2, 3/4, 1, and 1 1/4 pipe sizes, specify 20, 40, or 80 mesh. For 1 1/2 and 2 pipe sizes, specify 6, 12, 20, 30, 50, 80, or 120 mesh.

Easy-Maintenance Plastic Y-Strainers

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: 36° to 140° F

A unique two-piece threaded body comes apart for cleaning without disconnecting your pipeline. Connections are NPT male.

Polypropylene strainer is more chemical resistant than acetal. Screen is polyester and seal is fluoroelastomer. Color is blue.

Acetal strainers have a threaded drain with a ball valve to control flow while cleaning. Seal is Buna-N. Screen is Type 316 stainless steel, except strainers with 20 and 450 mesh screens, which have a polyester screen. Color is black.

To Order: Please specify screen size: 20, 50, 75, 120, 200, or 450 mesh.

Pipe Size	Lg.	Ht.	Strainer		Replacement Screen	
Polypropylene						
3/4	4 3/4"	5 7/16"	44085K11	$55.13	44085K8	$35.64

Compact Acetal Y-Strainers

- Max. Pressure for Water, Oil, Inert Gas, and Acetone: 125 psi @ 70° F
- Temp. Range: 32° to 180° F

Strain particles from pipelines in tight spaces. Screen size is 100 mesh. Body is acetal, screen is Type 304 stainless steel, and seal is EPDM. Color is black. Connections are NPT female.

Pipe Size	Lg.	Ht.	Strainer		Replacement Screen	
1/4	1 13/16"	2 1/4"	44305K25	$11.44	44305K19	$3.85
3/8	1 13/16"	2 1/4"	44305K27	11.44	44305K19	3.85

For information about strainers, see page 373. For information about pipe size, see pages 2-3.

Corrosion-Resistant PVC and CPVC Y-Strainers

PVC with NPT Female Connections

- Max. Pressure for Water and Diesel Fuel: 150 psi @ 70° F
- Temp. Range:
  PVC: 35° to 140° F
  CPVC: 35° to 190° F

All-plastic construction makes these strainers corrosion resistant and lightweight. Use with Schedule 80 pipe and fittings. Seal is fluoroelastomer. All have a threaded hex cap to access the screen for cleaning.

PVC strainers have a PVC screen. Color is dark gray. ***CPVC strainers*** withstand higher temperatures than PVC. Screen is CPVC. Color is light gray.

To Order: Please specify screen size: 1/32″ or 1/16″ perforations.

Easy-View PVC Y-Strainers

With PVC Screen

With Type 316 Stainless Steel Screen

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: 35° to 120° F

A clear PVC body lets you monitor debris without disconnecting the pipeline.

Strainers with PVC screen are more corrosion resistant than strainers with Type 316 stainless steel screen. Seal is EPDM. They come with a set of NPT female and socket weld (unthreaded) union fittings for each pipe connection.

Strainers with Type 316 stainless steel screen are more durable than strainers with PVC screen. Seal is fluoroelastomer. Connections are NPT female.

To Order: Please specify screen size: 20 or 40 mesh.

High-Capacity Polypropylene T-Strainers with Drain Plug

1 1/4 and 1 1/2 Pipe Sizes

- Max. Pressure for Water, Ethylene Glycol, Acetone, and Sodium Nitrate: 150 psi @ 70° F
- Temp. Range: –20° to 150° F

Well suited for high-flow applications, an extra-long bowl and screen provide greater dirt-holding capacity than our other T-strainers. These strainers also have a threaded drain with plug for cleaning. Head and bowl are glass-reinforced black polypropylene, screen is Type 316 stainless steel, and seal is EPDM. Connections are NPT female.

Strainers with 3/4 and 1 pipe size have two tubes on top for mounting to provide extra stability.

To Order: Please specify screen size: 16, 30, 50, 80, or 100 mesh.

Pipe Size	Lg.	Ht.	Plug Pipe Size	Strainer		Replacement Screen

Polypropylene T-Strainers

With Clear Bowl

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: –40° to 125° F

Clean out your strainer less often—a T-shape body provides greater dirt-holding capacity than Y-strainers. Strainers have a black glass-filled polypropylene head. Screen is Type 304 stainless steel and seal is EPDM. Connections are NPT female.

Strainers with clear bowl allow you to monitor debris without disconnecting your pipeline. Bowl is nylon.

Strainers with black bowl have a polypropylene bowl.

Optional fluoroelastomer seals are for use in oil applications.

To Order: For strainers and replacement screens, please specify screen size: 20, 40, 50, or 80 mesh.

With Black Bowl

For information about strainers, see page 373. For information about pipe size, see pages 2-3.

Chemical-Resistant Polypropylene T-Strainers

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: –40° to 125° F

With Polypropylene Screen

Made entirely of plastic to withstand exposure to mineral acids and salt solutions that corrode stainless steel. The T-shape body also provides greater dirt-holding capacity than Y-strainers. They have a clear nylon bowl so you can monitor debris without disconnecting your pipeline. Head is black glass-filled polypropylene and seal is EPDM. Connections are NPT female.

Strainers with polyethylene screen trap fine particles. They're also good for use in vacuum applications.

To Order: For strainers with polypropylene screen and replacement polypropylene screens, please specify screen mesh size.

Pipe Size	Lg.	Ht.	Strainer		Replacement Screen	
With Polyethylene Screen—Screen is 200 mesh.

Polypropylene T-Strainers with Push-to-Connect Tube Fittings

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: –40° to 125° F

Filter debris from tubing lines. Push-to-connect fittings make a tight seal around flexible tubing. Strainers have a clear nylon bowl so you can view debris without disconnecting your pipeline. Head is black polypropylene, screen is Type 304 stainless steel, and seal is EPDM.

To Order: Please specify screen size: 20, 40, 50, or 80 mesh.

NSF-Certified Easy-View PVC Inline Strainers

- Max. Pressure for Water and Diesel Fuel: 230 psi @ 70° F
- Temp. Range: 14° to 120° F

Meet requirements for drinking (potable) water with one of these NSF 61 certified strainers. They combine a clear PVC body with union fittings so you can view and clear out debris without disconnecting your pipe connections. Screen size is 35 mesh. Screen is Type 316 stainless steel and seal is EPDM. Connections are NPT female.

Strainer Washers

Install these in pipe or fittings to protect equipment in locations where other strainers don't fit. They're often used with valves, sprayers, parts washers, and washing machines. Screen is Type 304 stainless steel.

To Order: Please specify screen mesh size from those listed in the table.

Impact-Resistant Nylon T-Strainers

- Max. Pressure for Water: 150 psi @ 70° F
- Temp. Range: 0° to 125° F

Combine the durability of an all-nylon body with the dirt-holding capacity of a T-strainer. Screen is Type 304 stainless steel and seal is Buna-N. Strainers have a white head.

Strainers with clear bowl allow you to monitor debris without disconnecting your pipeline.

Optional fluoroelastomer seals are for use in oil applications.

To Order: For strainers and replacement screens, please specify screen size: 20, 40, or 80 mesh.

Easy-View Bronze Basket Strainers

- Max. Pressure for Water, Salt Water, and Diesel Fuel: 25 psi @ 70° F
- Temp. Range: 33° to 140° F

A clear plastic bowl allows you to monitor the collection of debris without stopping flow in your system. Basket has 3/32" perforations. Strainers have a bronze head, Type 304 stainless steel basket, and Buna-N seals. Use the drain at the bottom of the bowl for cleaning. Strainers come with brass brackets for wall mounting. UL listed. Connections are NPT female.

Replacement Basket

- Max. Pressure for Water, Oil, Acetone, and Diesel Fuel: 200 psi @ 100° F
- Temp. Range: 20° to 200° F

A fundamental component of high-flow industrial processes, basket strainers hold considerably more debris than Y- and T-strainers. They have a removable cover and a threaded drain with plug for cleaning. Basket is Type 316 stainless steel.

Cast iron strainers have a Buna-N seal.

Bronze strainers are stronger and more corrosion resistant than cast iron. Seal is Buna-N.

Type 316 stainless steel strainers are more corrosion resistant than bronze or cast iron. Seal is chemical-resistant fluoroelastomer.

Strainers with ANSI Flange Connections— Have brackets on the bottom so you can bolt them to the floor for stability. *Cast iron strainers* have Class 125 flanges. *Bronze* and *Type 316 stainless steel strainers* have Class 150 flanges.

To Order: For strainers and replacement baskets, please specify screen size: 20, 40, or 100 mesh or 1/16″, ⅛″, or 3/16″ perforations. For replacement seals, please specify Buna-N or fluoroelastomer.

Easy-Swap Dual-Basket Strainers

With NPT Female Connections

With ANSI Flange Connections

Replacement Basket

- Max. Pressure for Water, Oil, Acetone, and Diesel Fuel: 150 psi @ 70° F
- Temp. Range: 20° to 150° F

Don't shut down your operation to service your strainer. These have a dual-basket body so you can divert flow to one basket while you work on the other. Strainers have a removable cover and threaded drains with plugs for cleaning. Baskets are Type 316 stainless steel. Strainers have brackets on the bottom, so you can bolt them to the floor for stability.

Cast iron strainers have a Buna-N seal.

Bronze strainers are stronger and more corrosion resistant than cast iron. Seal is Buna-N.

Type 316 stainless steel strainers are more corrosion resistant than bronze or cast iron. Seal is chemical-resistant fluoroelastomer.

Strainers with ANSI Flange Connections— *Cast iron strainers* have Class 125 flanges. *Bronze* and *Type 316 stainless steel strainers* have Class 150 flanges.

To Order: For strainers and replacement baskets, please specify screen size: 1/32″ or 1/16″ perforations. For replacement seals, please specify Buna-N or fluoroelastomer.

For information about strainers, see page 373. For information about pipe size, see pages 2-3.

Low-Pressure Flanged Cast Iron Basket Strainers

- Max. Pressure for Water, Oil, and Acetone: 60 psi @ 70° F
- Temp. Range: –20° to 150° F

Capture and remove particles from low-pressure flanged pipelines. Strainers have a removable cover and a threaded drain with plug for cleaning. Basket has 1/8″ perforations. Body is cast iron; meets ASTM A126, Class B. Basket is Type 304 stainless steel and seals are Buna-N. Connections are ANSI Class 125 flanges. For ANSI flange dimensions, see page 378.

Pipe Size	Lg.	Ht.	Strainer		Replacement Basket	
2	8″	12 1/2″	44225K13	$342.59	44225K53	$141.18
3	9 3/4″	16″	44225K17	435.19	44225K57	170.59
4	11 1/2″	18″	44225K19	597.74	44225K59	196.08

ASME-Code Stainless Steel Basket Strainers

- Max. Pressure for Water, Oil, Inert Gas, Diesel Fuel, and Natural Gas: 200 psi @ 100° F
- Temp. Range: –20° to 150° F

Constructed for use with boilers and pressure vessels, these strainers meet ASME Code Section VIII and ANSI B16.5. Body is Type 316 stainless steel for excellent corrosion resistance. Strainers have a removable cover and a threaded drain with plug for cleaning. Basket is Type 304 stainless steel and seals are fluoroelastomer. Connections are NPT female.

To Order: Please specify screen size: 1/16″ or 1/8″ perforations.

Pipe Size	Lg.	Ht.	Strainer		Replacement Basket	
1/2	4 9/16″	6 1/2″	9874K11	$276.52	9874K21	$118.30

Self-Cleaning Stainless Steel Basket Strainers

With NPT Male Connections

With ANSI Flange Connections

- Max. Pressure for Water:
  NPT Male Connections: 125 psi @ 70° F
  ANSI Class 150 Flange Connections: 150 psi @ 70° F
- Temp. Range: –32° to 135° F

Spend less time on maintenance—these strainers have an inverted basket design that allows debris to fall into the drain as it collects. They also create a minimal pressure drop, which saves energy. Body is Type 304 stainless steel, basket is Type 316 stainless steel, and seals are EPDM. Strainers have two 1/4 NPT female gauge ports so you can measure differential pressure, which indicates when the basket needs to be cleaned or replaced. Drain is 1 1/2 NPT male. For ANSI flange dimensions, see page 378.

To Order: Please specify screen size: 16, 30, 40, 60, 100, or 200 mesh.

Pipe Size	Lg.	Ht.	Strainer		Replacement Basket

Easy-to-Install Plastic Basket Strainers

Single Basket Easy-View Polyester

Dual Basket

- Max. Pressure for Water, Oil, and Diesel Fuel:
  PVC and CPVC: 150 psi @ 70° F
  Polyester: 100 psi @ 70° F
- Temp. Range: PVC: 40° to 140° F
  CPVC: 40° to 180° F
  Polyester: 34° to 120° F

Union fittings make these strainers easy to install and allow for maintenance without detaching your pipe connections. They have two outlets for installation in inline or parallel pipe connections. Cover and drain are threaded for easy access for cleaning. Seals are fluoroelastomer. Strainers come with a set of NPT female and socket weld (unthreaded) union fittings for each pipe connection.

Single-basket strainers come with a plug for the unused outlet.

Dual-basket strainers allow for maintenance without interrupting flow. Baskets are connected with a diverting valve. Turn the valve handle to direct flow to one basket while you clean the other.

PVC strainers have a PVC body and basket. ***CPVC strainers*** handle higher temperatures than PVC and polyester. Body and basket are CPVC. ***Easy-view polyester strainers*** have a clear polyester body. Basket is PVC.

To Order: Please specify screen size: 1/32″, 1/16″, 1/8″, or 3/16″ perforations.

Slimline Cast Iron Suction Strainers

- Use with oil and diesel fuel
- Max. Temp.: 225° F

Designed for installation through a tank wall, these strainers have a narrow diameter and both male and female threads. You can also install at the top of a tank for connection to a standpipe. They're often used in hydraulic systems. Body is cast iron and steel; screen is Type 304 stainless steel. Connections are NPT; tank connection is male and pipe connection is female.

To Order: Please specify screen mesh size from those listed in the table.

Pipe Size Male	Pipe Size Female	Ht.	Hex Size	Available Screen Mesh Size

For information about strainers, see page 373. For information about pipe size, see pages 2-3.

Suction Strainers

A

B&C

D

E

- Use with:
  Styles A and B: Oil and diesel fuel
  Styles C and D: Oil
  Style E: Water and oil
- Max. Temp.: 270° F

Filter hydraulic fluids from a reservoir, tank, or other small container. Screen is Type 304 stainless steel. Connection is NPT female.

Styles A-C—Connection is aluminum, which is lighter in weight than steel or stainless steel.

Style D—Connection is steel, which is stronger than aluminum.

Style E—Connection is Type 304 stainless steel for greater corrosion resistance than aluminum or steel.

To Order: Please specify screen mesh size from those listed in the table.

High-Capacity Nylon Suction Strainers

Female Connection

Male Connection

- Use with oil
- Max. Temp.: 225° F

The tallest of our suction strainers, these have a large surface area to retain more dirt for use in high-flow applications. Also known as sump strainers, they're often used in hydraulic applications. Connection is black glass-reinforced nylon, screen is Type 304 stainless steel, and end cap is aluminum.

To Order: Please specify screen mesh size from those listed in the table.

Miniature PVC Suction Strainers

- Use with water
- Max. Temp.: 120° F

Use these strainers with water softeners, pressure washers, and in hydraulic systems. A black PVC connection is paired with a Type 304 stainless steel screen for good corrosion resistance. Connection is female; it fits NPT male threads.

To Order: Please specify screen mesh size from those listed in the table.

For Pipe Size	Ht.	Dia.	Available Screen Mesh Sizes		
1/4	1 1/8"	1 1/2"	20, 30, 40, 50, 80	98755K11	$2.10

1 1/2	2 3/8"	3 3/16"	20, 30, 40, 50, 80	98755K16	8.50

All-Nylon Suction Strainers

- Use with water, salt water, oil, and paint
- Max. Temp.: 225° F

For applications that corrode metal, use one of these all-nylon strainers. Screen size is 30 mesh. Color is black.

Female Connection

Drinking-Water Bronze Suction Strainers with Check Valve

- Use with drinking (potable) water
- Temp. Range: 32° to 190° F

ANSI certified for use with drinking (potable) water in all states as of November 1, 2011, these strainers are often used in water-delivery applications. Also known as foot valves, they block particles from entering your line and stop backward flow. Screen has 7/64" perforations. Body is bronze and screen is Type 430 stainless steel. Check valve has a Buna-N seal. Max. pressure is 400 psi. Connection is NPT.

Cast Iron Suction Strainers with Check Valve

- Use with water and oil
- Temp. Range: 32° to 150° F

Also known as foot valves, use these rugged strainers to stop debris from entering your pipeline and prevent backward flow. Screen has 5/16" Dia. holes. Body is cast iron. Check valve has a leather flapper. Max. pressure is 10 psi. Connection is NPT female.

Pipe Size	Ht.	Dia.	Strainer		Replacement Flapper

PVC Suction Strainers with Check Valve

- Use with water, oil, and diesel fuel
- Temp. Range: 40° to 140° F

Stop large particles from entering your line while preventing backward flow. Also known as foot valves. Screen has 3/16" perforations. Body and screen are PVC. Check valve has a fluoroelastomer seal. Max. pressure is 150 psi.

Strainers with 1/2 to 2 pipe size come with an NPT female and a socket weld (unthreaded) union fitting for each pipe connection; *3 and 4 pipe size* come with an NPT female union fitting.

Pipe Size	Ht.	Dia.	Strainer		Replacement Screen

For information about strainers, see page 373. For information about pipe size, see pages 2-3.

Cut-to-Size Acetal Suction Strainer with Check Valve

- Use with water
- Temp. Range: 32° to 180° F

A convenient replacement part to keep on-hand, this strainer has NPT male threads for ¾, 1, 1¼, and 1½ pipe sizes. Use a hacksaw to remove the pipe sizes that are smaller than you need. Also known as a foot valve, the strainer has a check valve to stop backward flow. Screen has 3/32″ perforations. Body is white acetal. Check valve has a neoprene seal. Overall size is 1 15/16″ Dia. × 7″ Ht.

4492K121 ..... $25.00

Steam Traps

Increase the efficiency of your radiator by venting cool air—these compact steam traps open and close based on temperature. Also known as thermostatic steam traps, they are often used with convection heaters, drip lines, and risers. Connections are NPT.

Style A are for elbow pipe connections. Inlet is male and outlet is female; install with outlet on the side.

Style B are for horizontal pipe. Inlet is male and outlet is female.

Styles C & D are for vertical pipe; install with the outlet pointing down. *Style C* have a male inlet and female outlet. *Style D* have a female inlet and outlet.

Versa-Mount High-Flow Steam Traps

Get near-continuous condensate discharge in vertical or horizontal pipe. Install the connector in either direction—steam trap swivels on the connector so it can be positioned vertically.

Connector and steam trap are sold separately. Choose the connector that fits your line, and attach the steam trap with the included bolts. Position steam trap vertically after mounting.

Steam trap is normally open to release condensate; it closes immediately when steam enters to prevent energy loss. Also known as an inverted-bucket steam trap. Body is Type 304 stainless steel. Max. pressure is 200 psi. Max. temp. is 800° F. Condensate capacity is 500 lbs./hr.

Connectors are Type 304 stainless steel.

Steam Trap	**4382K31**	$285.00
½ NPT Female Connector	**4382K32**	150.77
¾ NPT Female Connector	**4382K33**	150.77

High-Flow Steam Traps

Cast Iron ***Type 304 Stainless Steel***

Also known as inverted-bucket steam traps, these provide near-continuous discharge to accommodate high condensate levels. Traps are normally open to release condensate. They close immediately when steam enters to prevent energy loss. Install in a horizontal pipeline. Connections are NPT female.

Type 304 stainless steel steam traps are more corrosion resistant than cast iron.

Super-Energy-Saving Steam Traps

E&G

F

Maximize the energy from your steam line. Also known as thermodynamic steam traps, these discharge condensate when it's close to steam temperature for minimal energy loss. They also minimize noisy water hammer. Often used with tanks and vats, steam mains, steam tracers, presses, and heating equipment. Body is stainless steel. Max. temp. is 800° F. Install in a horizontal pipeline. Connections are NPT female.

(F) Steam traps with strainer stop debris from moving down the pipeline. Screen has 1/32″ perforations.

(G) Zero-steam-loss steam traps are insulated to increase energy efficiency.

For information about pipe size, see pages 2-3.

Energy-Saving High-Flow Steam Traps

Vent cool air and condensate to increase energy efficiency in your steam lines. The vent on these steam traps is normally open, allowing condensate and air to flow out. It closes immediately when steam enters to prevent energy loss. Also known as thermostatic steam traps, they're ideal for use with heat exchangers, air-heating coils, and drip stations in steam lines. Traps are cast iron. Connections are NPT female.

Steam traps for inline or parallel pipe connection have an inlet and an outlet on each side to connect inline or parallel steam and condensate lines. Include two plugs for the unused ports.

Steam traps for parallel pipe connection have an inlet and outlet on the same side to connect parallel steam and condensate lines.

Steam traps for inline pipe connection have an inlet and outlet on opposite sides to connect inline steam and condensate lines.

Sanitary Steam Filters with Reusable Cartridge

Follow health and safety practices for food and dairy applications. These steam filters meet 3-A sanitary standard requirements. They have a carbon cartridge that removes 95% of particles down to 2 microns. Cartridge can be cleaned for reuse. Max. pressure is 100 psi. Max. temp. is 360° F. Connections are NPT female.

Pipe Size	Steam Capacity @100 psi, lbs./hr.	Lg.	Ht.	*Filter*		*Replacement Cartridge*

Maintenance-Free Moisture/Particle Separators for Air and Steam Lines

Get nothing but clean dry air, inert gas, or steam—separators remove 99% of moisture and particles down to 10 microns. Plus they have no baskets or cartridges to clean or replace. Particles fall to the bottom of the separator and are discharged through the drain trap with minimal pressure loss.

Body is cast iron. Max. temp. is 450° F. Separators meet ASME Code Section VIII for pressure vessels. Connections are NPT female.

For Low Pressure— Smaller and more efficient than separators for medium pressure, a baffle separates contaminants from your media.

For Medium Pressure— Separators use centrifugal flow to remove contaminants from your media. They have a 1/4 NPT female vent on top.

Water Filters

w/ Opaque Blue Housing

w/ Clear Housing and Bypass Valve (4496K41)

Repl. Cartridge

Filters have an easy-to-replace, industry-standard cartridge that removes rust and sediment; taste, odor, and chlorine; or oil, gasoline, diesel fuel, and hydrocarbons. Housings and cartridges are made of FDA-grade materials. All have a pressure-release button for safe cartridge replacement, unless noted. Max. pressure is 125 psi and max. temp. is 125° F, unless noted.

Note: Filters work with any double open-end (DOE) filter cartridge with the same OD and length. See pages 390-394 for other cartridges. If using both, install rust-and-sediment filters before taste-and-odor filters in your line. For exceptionally dirty water, install two rust-and-sediment filters.

Connections: NPT female.

Filters with opaque blue housing keep light out to reduce the growth of algae.

Filters with clear housing make it easy to see the flow of water and when the cartridge needs to be replaced. ***Filters with bypass valve*** allow you to stop flow completely to change your cartridge. Furnished with a spanner wrench and adapters for 3/4" compression tube fittings, unless noted. 4496K41 can also route water flow around a clogged cartridge.

High-Capacity Water Filters

w/ Opaque Blue Housing

w/ Clear Housing

Repl. Cartridge

With a larger housing and a cartridge that has 3 1/2 times the surface area of the water filters above, these filters provide higher dirt-holding capacity. Housings and cartridges are made of FDA-grade materials. They include a pressure-release button for safe cartridge replacement. All include a filter cartridge.

Note: Filters work with any double open-end (DOE) filter cartridge with the same OD and length. See pages 390-394 for other cartridges. If using both, install rust-and-sediment filters before taste-and-odor filters in your line. For exceptionally dirty water, install two rust-and-sediment filters.

Connections: NPT female.

Filters with opaque blue housing keep light out to reduce the growth of algae. Housing is polypropylene. *Filter for removing iron* improves taste, reduces damage to water heaters, and prevents staining of sinks and tubs when there is iron in your groundwater. ***Filters with clear styrene housing*** make it easy to see the flow of water and when the cartridge needs to be replaced.

♠ Housing and cartridge are NSF certified.

Ultra-Fine Water Filters with Change-Out Indicator

A built-in differential pressure gauge lets you know when it's time to change your filter cartridge. Use these filters for removing taste, odor, and bacteria. The carbon block cartridge is rated at 0.15 microns to remove extra-fine particles. They include a bracket with 3/8″ mounting holes for panel mounting (mounting hardware not included) and a pressure-release button and spanner wrench for safe and easy cartridge replacement. Housing is blue polypropylene. Overall size is 5 3/8″ Dia. × 14 1/2″ Ht. Max. pressure is 125 psi. Max. temperature is 125° F.

Connections: NPT female.

Pipe Size	Max. Flow, gpm	Filter Cartridge OD	Filter Cartridge Ht.		
1/2″	1	2 7/8″	10 1/4″	8931T21	$155.89
3/4″	1	2 7/8″	10 1/4″	8931T22	170.38
Replacement Cartridge				8931T26	83.50

Heavy Duty Space-Saving Two-Stage Water Filter

To save space, this filter doesn't have individual housings for each cartridge; it contains two stages of filtration within a single body. The first stage is a nylon cartridge that removes rust, sediment, sand, and algae (cartridge measures 3 1/8″ OD × 5 5/8″ Ht.). The second stage is an activated-carbon cartridge that removes unpleasant tastes and odors, including chlorine (cartridge measures 4 1/4″ OD × 5 1/4″ Ht.). Both are rated at 5 microns.

It has a rugged cast aluminum housing for more durability than a polypropylene or styrene housing. Overall size is 7 1/2″ Dia. × 14″ Ht. Max. flow rate is 8 gpm. Max. pressure is 100 psi. Max. temperature is 110° F.

Connections: 1″ NPT female.

Water Filter	4435K14	$242.55
Replacement Cartridges		
Cartridge for Removing Sediment and Rust	4435K15	19.29
Cartridge for Removing Taste and Odor	4435K16	31.79

Quick-Change Water Filters with Instant Tube Connections

Instant (push-to-connect) tube connections allow you to quickly and easily install these filters into your tubing line. They have a slim diameter for squeezing into tight spaces. Cartridge unthreads from filter head for quick replacement without a spanner wrench. To prevent leaks, an internal valve automatically stops flow during cartridge replacement.

All have a polypropylene housing and cartridge. Overall size is 3″ Dia. × 11 5/8″ Ht. Cartridges are 2 1/4″ OD × 10 3/4″ Ht. Max. pressure is 125 psi. Max. temperature is 100° F. All meet ANSI/NSF 42.

Filter for removing taste, odor, chlorine, and lead also meets ANSI/NSF 53.

Connections: Instant (push-to-connect) tube fittings.

1/4″	0.5	0.5	8484T31	41.69	8484T36	33.32

Two-Stage Water Filter with Compression Tube Connections

Armed with two filter cartridges (one rated at 5 microns for removing sediment and particles and another that's rated at 0.5 microns for removing lead, tastes, and odors), this filter includes a faucet for dispensing clean water and a pressure-release button for safe cartridge replacement. Filter is ANSI/NSF 42 and 53 certified. It has 1/4″ compression tube fittings for connecting to metal tubing. It also includes a mounting bracket, tubing, wrench, and all necessary installation hardware. Housing is polypropylene. Overall size is 10 3/4″ Wd. × 5 1/2″ Dp. × 13 1/4″ Ht. Cartridge size is 2 1/2″ OD × 9 3/4″ Ht. Max. flow rate is 0.5 gpm. Max. pressure is 125 psi. Max. temperature is 100° F. ANSI certified for use with drinking (potable) water in all states as of October 1, 2010.

Connections: 1/4″ compression tube fittings.

Water Filter	44285K76	$199.74
Replacement Cartridge for Removing Sediment and Rust (Polypropylene)	44015K87	5.40
Replacement Cartridge for Removing Taste, Odor, Lead (Activated Carbon)	44015K88	60.90

High-Temperature Water Filters

Made of glass-reinforced nylon to remove sediment from hot water. All are rated at 5 microns. Max. pressure is 125 psi and max. temperature is 160° F.

Connections: NPT female.

1/2″ filter has a black housing and a polypropylene cartridge. ***3/4″ filters*** have an orange/red housing and a cellulose/polyester cartridge. They comply with FDA CFR Title 21.

Pipe Size	Max. Flow, gpm	O'all Dia.	O'all Ht.	Filter Cartridge OD	Filter Cartridge Ht.	Filters		Replacement Cartridge

Easy-to-Clean Water Filters

3/4″ and 1″ Filters — *2″ Filter*

Use these filters' bottom drain port to flush the cartridge clean of sediment—there's no need to shut off or disassemble the filter for cleaning. They're easy to flush with just a quarter turn of the top thumbscrew. Filters have a polycarbonate housing bowl, a polypropylene upper body housing, and a Type 304 stainless steel filter cartridge. Max. pressure is 100 psi. Max. temperature is 120° F.

Cartridges for ***3/4″*** and ***1″ filters*** measure 1 5/8″ OD × 6 9/16″ Ht. **Connections:** NPT male.

Cartridges for ***2″ filter*** measure 2 5/8″ OD × 13″ Ht. **Connections:** Flange with a 6 1/4″ OD and four 5/8″ dia. mounting holes on a 4.75″ to 4.92″ bolt circle.

To Order: For filters and replacement cartridges, please specify micron size: 105, 150, or 250.

Inline Disposable Water Filters

With cartridge and housing in a single piece, these 5-micron filters (unless noted) are easy to install and take up no more space than a piece of pipe or tube. Use until the filter becomes clogged and then simply dispose of them. Perfect for tight spaces and low-flow applications. Housing is polypropylene. Max. pressure is 125 psi. Max. temperature is 100° F, unless noted. ***Filters for removing sediment and rust*** meet ANSI/NSF 42.

Connections: NPT female or instant (push-to-connect) tube fittings, unless noted.

Connections are 1/4″ compression tube fittings. Not rated for microns.

NSF-Certified Ultra-Fine Drinking Water Filter

Certified to ANSI/NSF standards 42 and 53 for drinking and cooking water, this filter removes unpleasant tastes and odors, lead, mold, algae, oxidized iron, sulfides, and cysts. It also inhibits scale and mineral buildup. This product is also NSF 61 certified for use with drinking (potable) water in all states as of January 1, 2010.

Housing is polypropylene. Filter comes with a 0.5-micron filter cartridge that has a blend of purifying material, including activated carbon. A built-in shutoff valve stops the water supply during filter changes. Also included is a mounting bracket with two 1/4″ slots. Overall size is 4″ Dia. × 15 1/2″ Ht. Cartridge size is 4″ OD × 10 1/2″ Ht. Max. flow is 0.75 gpm. Max. pressure is 125 psi. Max. temperature is 100° F.

Connections: 3/8″ NPT female.

Water Filter	9839K16	$294.27
Replacement Cartridge	9839K17	119.70

Water Softeners

Water softeners reduce the concentration of mineral deposits (calcium and magnesium) in your water, reducing scale buildup and improving the cleaning effects of detergent. These softeners have a built-in control valve that refills the tank only when necessary (demand operation), conserving water and salt. Their salt tank is made of high-density polyethylene (HDPE). Resin tank is made of polypropylene wrapped in fiberglass. They operate on 120 VAC, 60 Hz and include an 8-ft. power cord with two-prong plug.

Connections: 1″ NPT male.

Cartridge-Style Water Softeners

For protecting medical and food-service equipment from hard water, these combine a standard, polypropylene filter housing with a mineral-removing, water-softening cartridge. Cartridge contains an FDA-grade, sodium-based nonsolvent softening resin. Softeners also include a mounting bracket kit and a spanner wrench. Max. temperature is 100° F. **Connections:** NPT female.

3/4″ Filter—Cartridge removes 1,500 grains of $CaCO_3$.

1″ Filter—Cartridge removes 4,500 grains of $CaCO_3$.

Repl. Cartridge for 1″ Softener (4 1/2″ OD × 20″ Ht.)	8986T52	57.71

Multi-Stage Water Filters with Faucet

Four-Stage Filter

Also known as reverse osmosis filters, these remove cryptosporidium, lead, chlorine, copper, and unpleasant tastes and odors from your water. All have a 5-micron first-stage cartridge, a reverse osmosis membrane cartridge, and a carbon post cartridge. They also include a steel storage tank, a faucet, a wrench, tubing, and all necessary installation hardware. Cartridge housings are polypropylene. Carbon and polypropylene cartridges measure 2 1/2″ OD × 9 3/4″ Ht. Max. pressure is 90 psi. Max. temp. is 100° F.

Three-stage filter is rated for 7.6 gallons per day and is ANSI/NSF 58 certified. Overall size is 13 3/4″ Wd. × 4 3/4″ Dp. × 12 3/4″ Ht. Storage tank holds 3 gallons and measures 11 1/4″ Dia. × 16 3/4″ Ht. Reverse osmosis cartridge is 1 3/4″ OD × 10″ Ht. ANSI certified for use with drinking (potable) water in all states as of October 1, 2010.

Four-stage filter has an additional 0.5-micron carbon cartridge to keep small particles from the reverse osmosis membrane. Rated for 7.2 gallons per day, made from FDA-grade materials, and ANSI/NSF 58 certified. Overall size is 14″ Wd. × 6″ Dp. × 17″ Ht. Storage tank holds 2 gallons and measures 12″ Dia. × 16″ Ht. Reverse osmosis cartridge is 1 13/16″ OD × 11 3/4″ Ht. This product can be used with drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012.

Inline Bacteria-Eliminating Ultraviolet Water Purifiers

With Ballast

Disinfect your water without wasting valuable space. These purifiers have 1/4″ instant (push-to-connect) tube fittings to snap easily into your tubing line. Their ultraviolet lamp kills bacteria and purifies water. Housing is polypropylene for chemical resistance. Max. pressure is 125 psi. Max. temperature is 100° F.

Ballast (sold separately) is required to power the purifier. It operates on 120 VAC, 60 Hz and has a two-pin electrical connection that attaches to the lamp. It also has a 6-ft. power cord with two-prong plug.

Connections: 1/4″ instant (push-to-connect) tube fittings.

Bacteria-Eliminating Ultraviolet Water Purifiers

Type 316 Stainless Steel

PVC

The ultraviolet light in these purifiers kills bacteria to levels that meet U.S. Public Health Standards for bacterial purity. The bulb lasts for 10,000 hours. A fused quartz sleeve with wiper ensures maximum lamp output and lets you clean the lamp while the purifier is operating. They operate on 120 VAC, 60 Hz. Choose a purifier with a Type 304 stainless steel, Type 316 stainless steel, or PVC housing.

Type 304 and ***Type 316 stainless steel*** purifiers have a max. pressure of 100 psi, a max. temperature of 105° F, and a 5 1/2-ft. power cord with three-prong plug. **Connections:** NPT male.

PVC purifiers have a higher flow rate than stainless steel. They include a 6-ft. power cord with three-prong plug. Max. pressure is 40 psi and max. temperature is 150° F. **Connections:** NPT female.

Wall-Mount Water Deionizer with Indicating Light

Convert tap water into deionized water—these have a resin-filled PVC cartridge that removes calcium, magnesium, iron, nickel, chromium, nitrites, and other impurities from your water. Unit is ideal for watering lead-acid batteries and has a total dissolved solids (TDS) indicating light that turns red when it's time to replace the cartridge. Also included is a 10-ft. inlet hose, a 20-ft. outlet hose, a cartridge, and a wall mounting bracket with two 3/8″ dia. mounting holes (mounting hardware not included). Indicating light operates on two D batteries (included).

Overall size is 6″ Wd. × 44″ Ht. Cartridge measures 5″ OD × 28″ Ht. Cartridge is rated for approximately 600 gallons (rating will rise or lower based on the quality of your tap water). Max. flow rate is 2 gpm. Max. pressure is 80 psi. Max. temperature is 90° F.

Connections: Inlet is 3/4″ female garden hose thread (GHT); outlet is 3/4″ male GHT.

Water Deionizer	70715K83	$395.96
Replacement Cartridge	70715K82	167.44

Water Deionizers with Color-Indicating Cartridge

These deionizers have a resin-filled cartridge that changes color when it needs to be replaced and a see-through polypropylene cartridge housing that lets you see clearly when that is. It includes a pressure-release button and spanner wrench for safe and easy cartridge replacement. Max. pressure is 90 psi. Max. temperature is 100° F.

3/4″ Filter—Cartridge removes 700 grains of $CaCO_3$ and measures 2 1/2″ OD × 20″ Ht.

1″ Filter—Cartridge removes 900 grains of $CaCO_3$ and measures 4 1/2″ OD × 9 3/4″ Ht.

Connections: NPT female.

Pipe Size	Max. Flow, gpm	O'all Dia.	O'all Ht.	Deionizers		Replacement Cartridge

1″	2	7 5/16″	14″	8980T32	155.68	8980T72	71.03

Easy-Swap Water Deionizers

Replace the cartridge in these deionizers with just a quarter turn. Max. flow rate is 1.1 gpm. Max. pressure is 100 psi. Max. temperature is 120° F. Cartridge holders and cartridges are sold separately. Choose a single or double holder with a high-capacity or ultra-pure cartridge.

Double holder has a point-of-use faucet and digital purity meter that operates on 120 VAC, 60 Hz and includes a 6-ft. long power cord with three-prong plug.

Cartridges have a polypropylene housing. ***High-capacity cartridge*** removes ions (1,725 grains as NaCl to 50,000 ohm water quality). ***Ultra-pure cartridge*** removes ions to a higher purity level (760 grains as NaCl to 1,000,000 ohm water quality).

Connections: 1/2″ NPT female.

	O'all Size

Single Cartridge Holder ***Double Cartridge Holder*** ***High-Capacity Cartridge***

High-Capacity Water Deionizers with Indicating Light

When your application requires higher mineral removal capacity, these deionizers will get the job done. A water conductivity indicating light turns on to let you know when the cartridge needs to be replaced. All have a corrosion-resistant PVC housing, 6-ft. inlet tubing, 6-ft. outlet tubing, and one resin-filled deionizing cartridge (except where noted). Indicating light operates on 120 VAC, 60 Hz and has an 18″ power cord with two-prong plug. Max. pressure is 100 psi (unless noted). Max. temperature is 100° F.

Standard cartridges remove all dissolved minerals except silica and CO_2. They produce water quality greater than 20,000 ohms.

Ultra-pure cartridges remove all dissolved ion solids including silica and CO_2, but have a slightly lower mineral removal capacity. They produce water quality greater than 200,000 ohms.

Connections: Inlet is 3/8″ ID compression tube fitting; outlet is 3/8″ OD barbed tube fitting.

Inline Water Deionizers with Color-Indicating Cartridge

Barbed connections on both ends make it easy to install these deionizers inline. Cartridges contain a resin that changes color when exhausted, alerting you to replace the cartridge. They're ideal for low-flow, inline use in applications without back pressure. Cartridges have a polypropylene housing and measure 3 3/8″ OD × 18 11/16″ Ht. Max. flow rate is .17 gpm. Max. pressure is not rated. Max. temperature is 120° F.

High-capacity cartridge removes ions (1,725 grains as NaCl to 50,000 ohm water quality).

Ultra-pure cartridge removes ions to a higher purity level (760 grains as NaCl to 1,000,000 ohm water quality).

Optional mounting bracket lets you wall-mount the cartridge.

Connections: 3/8″ OD barbed tube fittings.

W/Optional Mounting Bracket

With High-Capacity Cartridge	3535K65	$128.63
With Ultra-Pure Cartridge	3535K66	128.63
Optional Mounting Bracket	3535K89	48.75

Self-Contained Bench-Top Water Distiller

Generate up to 8 gallons of distilled water in 24 hours. Unit includes a 5-gallon holding tank, 1/4″ ID instant tube connection, and a saddle-style valve to connect to a water line for a constant water feed. When the distiller's float system detects that the water level in the tank has dropped below half full, it will automatically draw water from the line.

Made of highly-polished stainless steel, distiller includes a stainless steel cartridge that accepts replaceable, bulk charcoal. It operates on 120 VAC, 60 Hz, and includes a 5-ft. long power cord with three-prong plug. Overall size is 22 3/4″ Ht. × 17 1/2″ Wd. × 11″ Dp. Max. pressure is not rated. Max. temperature is 212° F.

Self-Contained Water Distiller	35105K55	$2,228.85

Cleaner and Descaler (3 lbs.)	35105K6	45.63

Water-Purifying Granular Filter Media

Use with Fill-Your-Own Filter Cartridges on this page.

Activated Carbon Granules—Remove bad taste and odor from water. Sold in bags. Max. temperature is not rated. Meet ANSI/NSF 61.

Greensand—Protects pumps and cooling-water processes from potential blockage, extends seal life, and reduces odor. Sold in bags. Max. temperature is not rated. NSF 61 certified.

Type	Weight		
Activated Carbon Granules			
Odor Removal	27.5 lbs.	**9005T11**	$77.78
High-Purity Odor Removal	27.5 lbs.	**9005T12**	88.89
Greensand			
Iron, Manganese, and Hydrogen Sulfide Removal	44 lbs.	**9016T23**	43.89

Chemical-Resistant Mini Inline Filters

Use these inline filters with water, oil, air, inks, and cleaning solutions. They have a chemical-resistant polyoxymethylene acetal (POM) housing and barbed connections for use with tubing. Element is polyester for all except 150- and 250-micron filters, which have a nylon element. Not rated for max. flow, pressure, or temperature.

Connections: Barbed tube fittings.

To Order: Please specify micron rating from those listed.

For Tube ID	Available Micron Ratings	O'all Dia.	O'all Lg.		
1/4"	65, 130	5/8"	2"	**8991T31**	$3.57

Pancake-Style Inline Filters

A circular disc element makes these filters very compact. They have a rugged, chemical-resistant, polypropylene body for use in laboratory sampling applications. Max. pressure is 60 psi. Max. temperature is 122° F. Package quantity is 10.

With Polyethersulfone Element—Radiation sterilized. A glass microfiber first-stage filter extends the life of the element.

With PTFE Element—Ideal for chemically aggressive solutions, reagents, organic solvents, and venting in laboratory applications.

With Polypropylene Element—For more coarse filtering than the other two elements. Good for water-based and solvent sampling.

Connections: Barbed tube fittings for 6-10 mm tube ID.

Pipe-Fitting-Style Inline Filters

End View

These filters feature minimal pressure drop and a compact design similar to a pipe nipple; use to protect instrumentation and pneumatic lines. Designed for point-of-use service with water, oil, and air. Filters have a brass body with porous bronze element. Max. pressure is 300 psi. Max. temperature is 300° F. Choose a filter with a 40- or 90-micron rating.

Connections: NPT male.

Pipe Size	Max. Flow, cfm at 100 psi	Hex Size	O'all Lg.	*40-Micron Filters*		*90-Micron Filters*

Extreme-Pressure Inline Filters

With Standard Element

With Quick-Change Element

Trap particles as small as 10 microns in extremely high-pressure liquid and air applications. Filter element is porous Type 316 stainless steel. Max. flow is not rated.

With Standard Element—Max. pressure is 1,000 psi for brass filters and 3,000 psi for Type 316 stainless steel filters. Max. temp. is 300° F for brass filters and 450° F for Type 316 stainless steel filters.

With Quick-Change Element—Replace the filter element without disconnecting the filter from the line. Max. pressure is 3,000 psi for brass filters and 5,000 psi for Type 316 stainless steel filters. Max. temp. is 450° F.

Replacement filter element is compatible with all filters listed.

Connections: NPT female or compression tube fittings.

Miniature High-Efficiency Inline Filters

Nylon with Smooth End Connection

PVDF with Smooth End Connection

Nylon with Barbed End Connection

For low-flow inert gas or liquid sampling applications, these filters remove from 93% to 99.99% of particles at their specific micron rating. All are disposable and have borosilicate glass fiber filter media. Max. pressure is 125 psi.

Filters with nylon housing are clear and allow visual inspection. Max. temperature is 230° F.

Filters with PVDF housing offer greater chemical resistance as well as higher temperature resistance up to 275° F.

Filter with a smooth end connection and indicating element is used to remove oil from air. It has an element that turns red when it's saturated with oil so you know when it's time to replace the filter.

Filters with a barbed end connection accommodate both 1/4" and 3/8" ID tubing.

High-Temperature Inline Filter Capsules

- Max. Flow: See table
- Max. Temperature: 176° F
- Max. Pressure:
  Liquid: 100 psi @ 68° F, 25 psi @ 176° F;
  Gas: 60 psi @ 68° F (Chemical Resistant only)

These ready-to-use sealed capsules are disposable, made of polypropylene, and flushed with ultra-pure water to ensure product cleanliness. Absolute rated (retain 99% of particles). Overall size is 3 45/64" Dia. × 4 19/64" Ht.

General purpose capsules have polysulfone media. ***Electronic grade capsules*** have polysulfone media and are for point-of-use filtration of ultra-high purity water. ***Chemical resistant capsules*** have PTFE media and are for point-of-use filtration of process chemicals.

Bottom-Load Single Filter-Cartridge Housings

- Max. Flow: See table
- Max. Temperature: 250° F, unless noted
- Max. Pressure: 250 psi, unless noted

A one-piece shell construction provides quick, spill-free cartridge changes. Housings are in-line mount and are furnished with a mounting bracket, a 1/8" NPT female drain (unless noted), and a Buna-N head gasket. Housings use 1" ID and up to 2 7/8" OD double open-end (DOE) cartridges in the heights listed in the table.

Connections: NPT female.

T-Bolt Style—Has a T-shaped handle for quick, easy filter replacement without tools.

Ring Style—Includes a rod for easy disassembly. Max. temperature is 200° F; max. pressure is 300 psi. Drain is 1/4" NPT female.

Pipe Size	Max. Flow, gpm	O'all Dia. × Ht.	Uses Cartridge Heights

★ Uses 9 3/4" pleated, carbon, oil absorbent, or stainless steel filter cartridges as well as 10" string-wound filter cartridges.

Bottom-Load High Purity Single Filter-Cartridge Housings

- Max. Flow: See table
- Max. Temperature: 250° F
- Max. Pressure: Liquid: 300 psi; Gas: 150 psi

An ultra-clean electropolished finish prevents bacteria and particles from adhering to the surface of this housing. The Type 316L stainless steel construction is ideal for liquid or gas filtration applications requiring pure, nonreactive surfaces.

Housings accept double open-end (DOE) and 222 O-ring (closed end and fin end) cartridges. An external ring assembly secures the body to the head with a single Buna-N O-ring for a positive seal. Housings have a 1/4" NPT female drain and use 1" ID × 2 1/2" to 2 7/8" OD cartridges in heights listed in the table.

Connections: NPT female.

Pipe Size	Max. Flow, gpm	O'all Dia. × Ht.	Uses Cartridge Heights		
1"	10	4 1/4" × 18"	9 3/4" to 10"★	6882K1	$494.15
1"	20	4 1/4" × 28"	20"	6882K2	564.73

★ Uses 9 3/4" pleated, carbon, oil absorbent, or stainless steel filter cartridges as well as 10" string-wound filter cartridges.

Bottom-Load Thermoplastic Single Filter-Cartridge Housings

These units are made of lightweight, corrosion-resistant thermoplastic. All accept double open-end (DOE) cartridges, unless noted.

Connections: NPT female.

Standard and ***jumbo polypropylene*** housings have a Buna-N O-ring and four 3/16" dia. mounting holes in the head for easy installation. They also have a pressure release valve to relieve internal pressure when changing cartridges.

100%-pure polypropylene housings are for semiconductor, pharmaceutical, and deionized water applications. O-ring is silicone.

Glass-reinforced nylon housings have a fluoroelastomer O-ring to withstand higher temperatures.

Jumbo Polypropylene Housing

■ Accepts 222 O-ring (closed end) cartridges.

Filtering Felt

A needle-punch process creates a material suitable for fine filtering. Color is white.

Polyester felt offers greater temperature resistance than polypropylene. Maximum temperature is 300° F. Maximum length is 25 yards.

Polypropylene felt offers better resistance to acids and alkalies than polyester. Maximum temperature is 200° F. Maximum length is 100 yards.

Type 316L Stainless Steel Top-Load High-Volume Single Filter-Cartridge Housing

- Max. Flow: 150 gpm
- Max. Temperature: See table
- Max. Pressure: 150 psi

Handle high volumes of water with this filter housing, made of Type 316L stainless steel for corrosion resistance. It has Buna-N O-rings, mounting legs, side inlet/side outlet fittings with pressure gauges, and two ½″ NPT female drains.

Connections: NPT male.

Filter cartridges have a reusable pleated polyester filter. Maximum temperature is 140° F.

Note: Housing and cartridges are only for use with each other.

Housing

Pipe Size	Max. Temp.	Overall Size, Dia. × Ht.		
2″	300° F	12½″ × 46″	3455K21	$1,300.20

Type 304 Stainless Steel Top-Load Multi-Filter-Cartridge Housings

- Max. Flow: See table
- Max. Temperature: 300° F
- Max. Pressure: 150 psi

Housings have a phenolic hold-down knob with brass insert and a band-clamp to make cartridge replacement easy. Housings are Type 304 stainless steel with Type 316 stainless steel internal parts for extra corrosion resistance. All have a Buna-N O-ring, ½″ NPT female drain, and side inlet/side outlet.

Connections: NPT male.

Pipe Size	No. of Cartridges Required	Max. Flow, gpm	Overall Size, Dia. × Ht.	Uses Cartridge ID × OD	Heights

Type 304 Stainless Steel Top-Load High-Flow Multi-Filter-Cartridge Housings

- Max. Flow: See table
- Max. Temperature: 140° F
- Max. Pressure: 150 psi

Multiple cartridges provide high-volume filtering. Cartridges mount in a single cluster, so the entire set of cartridges comes out at once for easy service. To clean and change filter cartridges, simply remove the wing nuts holding the top cover.

Housings are Type 304 stainless steel for corrosion resistance. They include an EPDM rim gasket, bottom inlet/bottom outlet, and 1″ NPT male drain.

Connections: NPT male.

Pipe Size	No. of Cartridges Required	Max. Flow, gpm	Overall Size, Dia. × Ht.	Uses Cartridge ID × OD	Height

♣ Or fourteen 9¾″ high cartridges. ▲ Or twenty-four 9¾″ high cartridges.

About Micron Sizes and Particle Filtration

Filtration is the process of forcing a liquid or gas through a porous medium to remove solid particles. The particles are measured or classified in *microns*. One micron equals 0.0000394″.

Absolute-rated filter cartridges will retain at least 99% of particles of a particular micron size.

Micron Size	Inch	Mesh Openings per Inch	Micron Comparison
1	0.0000394″	12,000	Bacteria
10	0.000394″	1,250	Talcum Powder
20	0.00079″	625	Coal Dust (20 to 90 microns)
44	0.0017″	325	Lower Limit of Visibility
74	0.0029″	200	Human Hair
105	0.0041″	140	Table Salt
210	0.0083″	70	Beach Sand

Blanket-Wound Filter Cartridges

A blanket of filter media between layers of yarn becomes increasingly dense as it approaches the core of the cartridge, evenly distributing liquid and preventing clogs. This gives you better efficiency, higher dirt-holding capacity, and longer life than string-wound cartridges. Applications include water, electronics, electroplating, and food and beverage processes. Meets FDA 21 CFR.

Cartridges are double open-end (DOE). Overall size is 1 1/16″ ID × 2 19/32″ OD × 9⅞″ Ht.

Cotton cartridges have a Type 304 stainless steel core. Maximum temperature is 250° F.

Polypropylene cartridges have a polypropylene core. Maximum temperature is 150° F.

Micron Size	Max. Flow, gpm	Cotton w/Type 304 Stainless Steel Core		Polypropylene w/Polypropylene Core	
0.5	2	4535K41	$27.10	4535K71	$22.32

350	5	4535K48	17.83	4535K78	15.27

For information about micron size, see page 390. For filter-cartridge housings, see pages 389 and 390.

String-Wound Filter Cartridges

String-wound cartridges provide good dirt-holding capacity. All cartridges are double open-end (DOE).

Note: Use table as a guide only, chemical compatibility should be checked for each specific fluid. Pressure, temperature, flow rate, and micron size should be taken into consideration.

String/Core Material	Water	Organic Solvents	Petroleum Oils	Alkalies	Organic Acids	Oxidizing Agents	Mineral Acids	Max. Temp.

Large Diameter String-Wound Filter Cartridges

Same as the other string-wound filter cartridges on this page, but with a larger OD for higher flow and greater filtering capacity. All are double open-end (DOE) style. Made of FDA-compliant materials.

Polypropylene with polypropylene core cartridges have a maximum temperature of 140°F.
Cotton with Type 304 stainless steel core cartridges have a maximum temperature of 250°F.

String-Wound Polypropylene/Carbon Filter Cartridge

Get the best of two filtering processes. Cartridge contains 10 oz. of granular activated carbon between a string-wound polypropylene first-stage filter on the top and a string-wound polypropylene postfilter on the bottom. String-wound filters have good dirt-holding capacity while carbon is ideal for water filtration. Filter is double open-end (DOE) and micron size is 5. Maximum flow is 3 gpm. Maximum temperature is 125°F. Overall size is 7/8″ ID×2 3/4″ OD×9 3/4″ Ht.

6629T44 ..... $9.14

For information about micron size, see page 390. For filter-cartridge housings, see pages 389 and 390.

Polypropylene/Carbon Filter Cartridges

Two filters in one. These combination filter cartridges do the work of a first-stage filter and a carbon filter, removing sediment plus handling taste and odor. Cartridges include a carbon block core with a spun polypropylene sheet wrapped around it that acts as a first-stage filter, plus a polypropylene protective outer netting, polypropylene end caps, and Buna-N O-rings. Maximum temperature is 165° F, and maximum flow is 1 gpm. Filter components meet FDA and NSF material requirements. Double open-end (DOE).

Micron Size	Overall Size, ID × OD × Ht.		
0.5	1″ × 2⅞″ × 9¾″	4542K27	$12.54
5.0	1″ × 2⅞″ × 9¾″	4542K26	10.96

Carbon Filter Cartridges

Carbon-Impregnated Cellulose

Granular Carbon

Extra Large Carbon Block

Reduce unwanted taste, odor, sediment, and chlorine from drinking water. These cartridges are designed for point-of-use water faucet only. All are double open-end (DOE) style, unless noted. Made from FDA-compliant materials. NSF certified to ANSI/NSF Standard 42, except as noted.

Carbon-Impregnated Cellulose— The cellulose fibers contain carbon to provide effective filtration. Internal and external netting provide additional strength and dirt-holding capacity.

Granular Carbon— Filled with carbon granules, these cartridges provide more carbon surface area for more effective filtration than carbon-impregnated cellulose. They have an internal 20 micron post-filter to reduce carbon fragments.

Carbon Block— Has the most carbon media for highly effective filtration and improved dirt-holding capacity. They have carbon briquette media, polypropylene end caps, polyethylene netting, and Buna-N O-rings. The 0.5 micron cartridges are effective at reducing Giardia and Cryptosporidum bacteria, as well as chlorine.

● Not NSF rated. ★ Single open-end style.

Acrylic Filter Cartridges

These one-piece (coreless) filters are made of acrylic fiber bonded with phenolic resin to maintain rigidity. Fibers are densely packed to give approximately 1½ times the solids removal capacity of string-wound cartridges. Filters are grooved for added surface area. Use with water, oils, paints, and weak acids and bases. Maximum temperature is 250° F; maximum flow is 5 gpm per 9¾″ to 10″ cartridge height. Double open-end (DOE). Size is 1⅛″ ID × 2 9/16″ OD.

Absolute-Rated Filter Cartridges

Acrylic/ Cellulose

Achieve consistent 99.9% particle retention with these resin-bonded cartridges. They are double open-end (DOE) and absolute rated.

Acrylic/cellulose fiber with phenolic resin is good for petroleum products, nondrinking water, paint, varnish, and detergents. Cartridges are coreless with a grooved body. Size is 1 1/16″ ID × 2 19/32″ OD. Maximum temperature is 200° F.

Polypropylene is FDA CFR-21 compliant for use with food and beverages, as well as pharmaceutical applications. Cartridges have a polypropylene core with a smooth body. Size is 1 3/32″ ID × 2½″ OD. Maximum temperature is 180° F.

NSF/FDA Polypropylene Filter Cartridges

These filters are NSF certified to ANSI/NSF Standard 42 and FDA compliant for food and beverage. They are made of melt-blown polypropylene for enhanced dirt-holding capabilities, and have an extruded fibrous core for additional strength. Double open-end (DOE). All components meet USP (United States Pharmacopeia), Class VI toxicity criteria (O-ring not included). Size is 1″ ID × 2½″ OD. Maximum temperature is 140° F.

Polyester Filter Cartridges

Ideal for applications requiring good chemical compatibility, these cartridges are bonded with phenolic resins to reduce fiber migration, which results in a cleaner final product. Cartridges consist of acrylic fibers with an outer prefilter wrap of acrylic and polyester fibers. These fibers have a coreless construction for efficiency and long life. Use for adhesives, coatings, inks, and many other water- and solvent-based liquids. Maximum temperature is 250° F; maximum flow is 5 gpm per 9¾″ to 10″ cartridge height. Size is 1⅛″ ID × 2 9/16″ OD. Double open-end (DOE).

For information about micron size, see page 390. For filter-cartridge housings, see pages 389 and 390.

Pleated Filter Cartridges

Pleats provide more filter media surface area than other cartridge styles for longer life and greater dirt-holding capacity. Cartridges are double open-end style (DOE). Maximum temperature is 140° F.

Cellulose—Designed to remove sediment in general water filtration, cartridges provide 4 sq. ft. of medium per 9¾″ height. Core is polypropylene; end caps are vinyl plastic. Size is 1″ ID × 2⅝″ OD.

Jumbo Cellulose/Micro-Fiberglass and ***Jumbo Polyester***—With a much larger OD than other filters, these cartridges have a higher dirt-holding capacity. Filters have 12 sq. ft. of medium per 10″ height. Size is 1″ ID × 4½″ OD.

Polyester—These cartridges have a rigid polypropylene core and PVC end caps. Filters have 4 sq. ft. of medium per 9¾″ height. Micron sizes 20 and 50 are cleanable and reusable. Size is 1 1/16″ ID × 2¾″ OD. NSF certified to ANSI/NSF Standard 61.

High-Capacity Polyester—Similar to the polyester cartridges above, but with 6 sq. ft. of medium per 9¾″ height for even greater dirt-holding capacity. Filters with micron sizes of 10 to 100 are cleanable and reusable. Size is 1 1/16″ ID × 2¾″ OD. Made of FDA-compliant materials. NSF certified to ANSI/NSF Standard 61.

Pleated Polypropylene Filter Cartridges with 222 O-Ring End Caps

High-purity, high-efficiency applications demand 222 O-ring end caps for a better seal than double open-ended cartridges. These cartridges work only with housings that accept 222 O-ring end caps. Cartridges are ideal for drinking water, beverages, and reverse osmosis first-stage filtration, plus are corrosion and chemical resistant. The pleats are made of layers of FDA-compliant melt-blown and spun-bonded polypropylene with EPR rubber gaskets and 222 O-ring seals. All have a molded polypropylene cage to support media. Size is 1″ ID × 2¾″ OD. Max. temperature is 140° F.

Fin end style uses fins to center the cartridge in the housing for a more secure fit.

Thermal-Bonded Polypropylene Filter Cartridges

Standard

Absolute Rated

These microfine, thermally bonded fiber filters deliver high filtration efficiency and consistent flow rates. Double open-end (DOE).

Standard cartridges have micro-grooves for added surface area and a polypropylene core. Size is 1 1/16″ ID × 2½″ OD. Max. temp. is 175° F.

Absolute-rated cartridges have polypropylene end caps, surface netting, and core. Filters have an efficiency rating of 99.98%. All materials are FDA compliant for use with drinking water and edible liquids according to CFR 21. Size is 1″ ID × 2 9/16″ OD. Max. temperature is 200° F.

Pleated Polypropylene Filter Cartridges

Pleats provide more surface area for longer life and more dirt-holding capacity. Materials are FDA compliant and have excellent chemical resistance. Double open-end (DOE).

Standard cartridges have layers of polypropylene that deliver fine filtration. Size is 1″ ID × 2¾″ OD. Max. temperature is 140° F.

Jumbo cartridges are 1″ ID × 4½″ OD. Max. temperature is 140° F.

Absolute-rated cartridges are made of backwashable media that's great for chemical, pharmaceutical, and food and beverage applications. Core and end caps are polypropylene. 1 1/16″ ID × 2½″ OD. Max. temperature is 200° F. Absolute rated.

Absolute-Rated Membrane Filter Cartridges

Double Open-End

Filter particles one micron and smaller with these absolute-rated filter cartridges. Filters have a 99.98% particle retention rate for consistent, reliable performance in some of our smallest micron sizes. Filter media is thermally bonded to polypropylene support structures. ***222 O-ring*** style provides a better seal than the double open-end cartridges for high purity applications.

PTFE— Ideal for use with solvents and other aggressive liquids. Flushed with deionized water to ensure product cleanliness. Meet USP (United States Pharmacopeia) Class VI toxicity criteria. Maximum temperature is 200° F. *Double open-end (DOE)* cartridges have expanded PTFE O-rings; *222 O-ring* cartridges have FEP encapsulated fluoroelastomer O-rings.

Polyethersulfone— Perfect for water systems, feed water, and water service applications. O-rings are ethylene propylene. Maximum temperature is 180° F. Made of FDA-compliant materials. Components meet USP Class VI–121° C Plastics Tests.

Polymeric Absorbent Filter Cartridges

The polymeric filter media absorbs hydrocarbon molecules, then chemically binds them to its interior, removing trace hydrocarbons from fluids to meet or exceed EPA discharge regulations. Filters have a polyolefin wall with a polypropylene core, and are double open-end (DOE) with a polyolefin foam gasket. Not rated for microns because they absorb rather than filter. Use for emulsified and dissolved oils, synthetic lubricants, grease, and organic solvents. Maximum temperature is 180° F.

Type 304 Stainless Steel Reusable Filter Cartridges

Cylindrical

Pleated

These cleanable, reusable filters are made of Type 304 stainless steel mesh and woven wire cloth so they withstand most caustic fluids including process water, oils, paints, and glues. Filters are double open-end (DOE). Maximum temperature is 250° F for cartridges with Buna-N seals; 500° F for cartridges with PTFE seals.

Pleated cartridges provide more filter surface area than the cylindrical cartridges for higher dirt-holding capacity.

Type 316 Stainless Steel Reusable Filter Cartridges

Cylindrical

Pleated

Even more corrosion resistant than the Type 304 stainless steel cartridges on this page. Filter media consists of Type 316 stainless steel, which is ideal for applications with high temperatures, corrosive liquids and gases, and process steam. Cartridges are cleanable and reusable. Double open-end (DOE). Maximum temperature is 250° F for cartridges with Buna-N seals; 500° F for cartridges with PTFE seals.

Cylindrical cartridges have sintered media and are absolute rated with a 99.9% particle retention rate.

Pleated cartridges have woven media. They also provide more surface area for higher dirt-holding capacity.

Thermoplastic Filter-Bag Housings and Filter Bags

All filter-bag housings mount inline and are bottom loading. Housings include a pressure gauge, wrench, and polypropylene filter-bag support basket. Filter bags sold separately.

Connections: NPT female.

Nylon housings are made of opaque black glass-reinforced nylon and are ideal for hot water applications. They have a Buna-N O-ring seal, a support basket with 3/16″ square perforations, and 1/4″ NPT male brass drain valve. Max. pressure is 125 psi @ 180° F. Max. temperature is 180° F.

Polypropylene housings are constructed of opaque white, high purity, virgin polypropylene. Housing includes a nonlubricated silicone O-ring, drain plug, valve, and a support basket with 7/16″ square perforations. Maximum pressure is 100 psi @ 125° F. Maximum temperature is 125° F.

Styrene housings are clear so you can see your filter bag. Housings are furnished with a Buna-N O-ring seal, polypropylene plugs, a wrench, and a support basket with 3/16″ square perforations. Maximum pressure is 100 psi @ 125° F. Maximum temperature is 125° F.

Filter bags have a PVC O-ring seal. *Polypropylene* has a maximum temperature of 140° F; *polyester* has a maximum temperature of 200° F.

High-Flow Polypropylene Filter-Bag Housings and Filter Bags

Polypropylene construction keeps these filter housings free from rust and corrosion. The threaded cover can be removed without tools, giving you easy access to your filter bag. All styles have upper side inlets. Filter bags sold separately.

Connections: 2″ NPT female.

Light duty housing is opaque blue polypropylene with a bottom outlet, Buna-N O-ring seal, and polypropylene basket with 9/64″ diameter perforations.

Heavy duty housings are opaque gray glass-reinforced polypropylene. All have lower side outlet, 10″ diameter base with four 7/8″ diameter mounting holes, fluoroelastomer O-ring seals, and a polypropylene basket with 1/4″ Ht.×2 1/8″ Wd. slots.

Filter bags are polypropylene felt with a polypropylene ring. Handle is welded in on 51655K8 and sewn in on the others. Maximum temperature is 200° F. **To Order:** Please specify micron size: 5, 10, 25, 50, or 100.

Miniature High-Pressure Metal Filter-Bag Housing and Filter Bags

An excellent choice for applications where space is a concern and a high pressure rating is required. Housing and filter bags are made of Type 304 stainless steel. Housing also includes a PTFE-encapsulated fluoroelastomer O-ring seal and a knurled collar for easy bag replacement. Filter bags sold separately.

Connections: 3/8″ NPT female.

Metal Filter-Bag Housings

With C-Clamp Lid and without Legs

With Eye-Bolt Lid and Three Legs

Our most popular filter-bag housings have large flow capacities. All have an upper side inlet, middle side outlet, and bottom outlet. Furnished with a Type 304 stainless steel bag support strainer basket that has 9/64″ diameter perforations (strainer baskets with different size perforations are sold separately on this page). Housings also have a fluoroelastomer cover gasket and two 1/4″ gauge ports on the side of housing; for gauges see pages 562-577. Housings with legs have 9/16″ diameter mounting holes. Maximum temperature is 400° F.

Connections: NPT female.

Housings with ***C-clamp lids*** have a swing lid for easy opening and closing.

Housings with ***eye-bolt lids*** are more rugged and have higher pressure ratings. They also have an internal stainless steel float that reduces the liquid level so you can quickly and easily remove the filter bag.

Carbon steel housings are painted black. ***Type 304 stainless steel housings*** are electropolished and mill finished.

Type 304 Stainless Steel Strainer Baskets for Filter-Bag Housings

For 4 1/2″ and 6″ Dia. Housings, Trade Sizes 3-9

BASKET TYPES

Perforated–1/4″ | Wire Mesh–20 | Wire Mesh–150

Strain large particles with these Type 304 stainless steel baskets. You can use them with or without a filter bag. Choose from perforated and wire mesh baskets. Baskets for housing Trade Sizes 3 through 9 include a hold-down spring.

To Order: For perforated baskets, please specify 1/16″, 9/64″, 3/16″, or 1/4″ perforation size. For 100 and lower wire mesh baskets, please specify 20, 40, 60, or 100 mesh size; for 150 mesh size see part number in table. For more information on mesh size see page 409.

For 8 5/8″ Dia. Housings, Trade Sizes 1, 2 & 12

● 9/64″ perforated basket height is 26 3/8″.

For information about micron size, see page 390. For filter bags, see pages 398-401.

Easy Access Filter-Bag Housings

Access your filter bag quickly with these top-loading flat-lid housings. All have an upper side inlet and a lower side outlet, fluoroelastomer O-ring seal, polished exterior, and three legs with 5/8″ diameter mounting holes, unless noted. Furnished with a strainer basket with 9/64″ diameter perforations. Cover has two 1/4″ ports (unless noted) for pressure gauge and vent valve.

Connections: NPT female.

Aluminum housings have a Type 304 stainless steel basket and four swing bolts on the cover for easy access.

Stainless steel housings have a Type 316 stainless steel basket and three swing bolts on the cover for easy access.

Filter-Bag/Cartridge Housings

You can use either a standard Trade Size 2 filter bag (see pages 398-401) or the absolute-rated ultra-high capacity filter cartridge designed especially for these housings (sold separately below). Housings seal and open easily and quickly with three swing bolts and a fluoroelastomer O-ring seal. They have a 2″ upper side inlet and bottom outlet, and two 1/4″ gauge ports. Housings include a Type 304 stainless steel basket with 9/64″ dia. perforations and three 22″ high legs with 5/16″ dia. mounting holes. Max. temperature is 400° F. **Connections:** NPT female.

ASME Code Filter-Bag Housings

Manufactured in accordance with the ASME (American Society of Mechanical Engineers) boiler and pressure vessel code Section VIII, Division 1, UM stamp. Use for filtering liquids, gases, and drinking and process water. The hinged cover has swing bolts with eye nuts for easy opening and a single O-ring design that ensures a positive seal. Housings have a side inlet and bottom outlet. Furnished with a Type 316 stainless steel basket with 11/64″ diameter perforations for Trade Sizes 3 and 4, and 1/8″ diameter perforations for Trade Size 2. Max. pressure is 150 psi; max. temperature is 250° F. **Connections:** NPT female.

Housings with Buna-N O-ring have three legs with 9/16″ × 7/8″ mounting slots.

ASME Code Tight-Seal Filter-Bag Housings

An integral pipe from the top side inlet directly feeds the liquid being filtered over the top of your filter bag. This flow-through-top design provides superior bag sealing, preventing any liquid from getting through the housing without going through the filter bag. All meet ASME (American Society of Mechanical Engineers) boiler and pressure vessel code Section VIII, Division 1. All have a bottom outlet. Cover is domed and seals firmly with swing-bolts. Each housing has two 1/4″ NPT female vent ports and three 24 1/2″ high legs with 3/8″ dia. mounting holes. Furnished with Buna-N O-rings and a Type 316 stainless steel basket with 5/32″ diameter perforations. Max. temperature is 250° F.

Connections: 150-lb. ANSI flange with 2″ pipe size.

For filter-bag housings, see pages 395-397. For information about micron size, see page 390.

About Filter Bags

Filter bags serve as filtering media in filter-bag housings. They may also be used in adapter head or slip-on applications that do not use housings. Filter bags are efficient and easy to change, while offering high flow rates with low pressure drops. They provide good dirt-holding capacities, trapping dirt within the bag.

Types of Bags— We offer bags that fit into standard housings, slip-on bags that do not require a housing but rather a clamp or wire, and grab-on bags that do not require a housing but rather a threaded adapter head.

Trade Size	For Housing Dia.	For Housing Lg.

12	8½″ to 9″	34″

Construction— *Sewn-seam* bags are the most common and easy to handle. *Heat-welded seam* bags have no needle holes or loose threads that could contribute to fluid contamination.

Micron Ratings— *Absolute-rated* filter bags will retain at least 90% of particles of the specified micron size. All other bags will retain particles, but not to any percent efficiency. Often referred to as nominal rated. To achieve the desired filtration, select a bag with a micron size smaller than the particles you want to filter.

Bags with a glazed finish have minimal fiber migration (contamination from fiber filter media, such as felt). Filter bags are not reusable, unless noted. To order a filter bag for your housing, use the following tables as a guide.

	Water	Organic Solvents	Petroleum Oils	Alkalies	Organic Acids	Mineral Acids
Polyester	Excellent	Excellent	Excellent	Good	Good	Good
Polypropylene	Excellent	Good	Fair	Excellent	Excellent	Good
Nylon	Good	Excellent	Excellent	Good	Fair	Poor
Nomex	Good	Excellent	Excellent	Good	Fair	Poor

Felt Filter Bags

With Woven Handle

With Carbon Steel Retaining Ring

These felt filter bags have sewn construction and a glazed finish (except 51635K, which have no finish).

Polyester are general-purpose media bags manufactured with a single layer of felt media. ***Heavy duty polyester*** filter heavy metallic particles and extremely viscous liquids such as tar without tearing. Interwoven polyester mesh provides extra strength to hold heavy particles. ***Polypropylene*** are FDA compliant. ***Nomex*** are for use in high temperature applications in the harshest environments.

Two-in-One High-Capacity Felt Filter Bags

Two bags in one, these high-capacity filter bags have an inner bag, which acts as a first-stage filter for coarser particles, and an outer bag, which filters finer particles. For example, the 5/1 micron size bags have an inner bag that acts as a first-stage filter to remove particles 5 microns or larger; an outer bag removes particles 1 micron and larger. As a result, they have 2 to 3 times the life and dirt-holding capacity of conventional felt filter bags. Bags have sewn construction and a glazed finish.

For information about filter bags, see page 398. For information about micron size, see page 390.

Heat-Welded Polyester Felt Filter Bags

The glazed finish and heat-welded construction of these bags eliminates pinholes and loose threads for a cleaner final product. The retaining ring and integral handle are made of polypropylene. Maximum temperature is 200° F.

Heat-Welded Felt Filter Bags with Pressure Seal Retaining Ring

Filter bags have heat-welded construction for reliable joints with no pin holes or loose sewing threads. The integral polypropylene retaining ring on these bags doubles as an extra seal that increases in strength as the pressure in your housing rises. The ring has integral handles for easy bag changing.

Standard filter bags have a singed exterior. ***Long-life*** filter bags are made of an extra thick fiber blend media with finer fibers for greater dirt-holding capacity than standard felt bags. Bags have a glazed exterior for minimal fiber migration.

Absolute-Rated Microfiber Filter Bags

These microfiber filter bags are absolute rated for consistent, reliable performance.

Polyester microfiber bags remove 99% of particles. Made of multiple layers for extended life and higher dirt-holding capacity. Sewn construction. Bags with micron sizes of 1 to 10 include a polyester felt first-stage filter and polyester microfiber media with polyester inner and outer covers. Micron sizes 25 to 100 include a glazed polyester felt outer layer with a polyester felt first-stage filter. ***Polypropylene microfiber bags*** are made of multilayer microfiber media that lasts up to three times longer than conventional felt bags, great for high-performance filtering jobs. Bags have a thermally bonded melt-blown media, heat-welded seams (unless noted), and remove at least 90% of particles. Media is FDA compliant, except where noted.

● Bag has sewn construction. Media is not FDA compliant.

★ Bag has sewn construction, a Type 304 stainless steel retaining ring, and sewn-in polypropylene handle. Media is not FDA compliant.

For information about filter bags, see page 398. For information about micron size, see page 390.

Absolute-Rated Microfiber Filter Bags with Pressure Seal Retaining Ring

These bags have a retaining ring that doubles as a pressure-activated seal—as pressure increases, the seal tightens. Filter bags are made of polypropylene. Maximum temperature is 194° F. Absolute rated.

Multilayered filter bags are sewn with the retaining ring heat welded to the bag. Media is multiple layers of melt-blown microfiber, providing a retention rate greater than 99%. ***Pleated filter bags*** are heat welded. Bags have multiple pleats inside for first-stage filtration and an outer layer for final filtering.

Filter Bags with Drawstring

Mesh bags have a sewn-in drawstring to secure to an existing pipe without clamps or wires. When full, simply remove the bag and tighten the string to secure trapped particles. Ideal for chemicals, paints, coatings, and water. Heat treated to inhibit fiber migration. Sewn construction. Maximum temperature is 275° F.

Filter Bags for 5-Gallon Pails

Sized specifically for 5-gallon pails, these bags are made of polyester mesh and heat treated to inhibit fiber migration. Ideal for chemicals, paints, coatings, and water. Sewn construction. Overall size is 20 1/4″ Dia. × 21 1/2″ Ht. Top diameter is 13 1/2″. Maximum flow is not rated. Maximum temperature is 275° F. Pail is not included.

Drawstring bags secure trapped particles upon removal.

Mesh Filter Bags

With Integral Polypropylene Handle

With Sewn-In Polyester Handle

Mesh filter bags are designed to filter larger particles. All bags are sewn.

Polyester mesh are made of inexpensive woven multifilament mesh. ***Polypropylene mesh*** are made of a monofilament mesh that is FDA compliant. ***Nylon mesh*** are strong, durable, cleanable, and reusable. The woven mesh construction is perfect for coarse filtering.

For information about filter bags, see page 398. For information about micron size, see page 390.

Slip-On Filter Bags

Adapt these filter bags to any existing pipe—no filter housing required. To secure, use a pipe clamp or just tie filter bag on the pipe with sturdy wire. When the bag is full, simply remove it and discard. Ideal for tank car filling, drum loading, and mixing chemicals. Sewn construction. Maximum temperature is 100° F.

Filter-Bag Adapter Heads and Grab-On Filter Bags

Create a filtration system anywhere with these threaded adapter heads and grab-on filter bags.

Adapter heads are made of polypropylene and thread directly to pipe. The filter bag retaining ring fits over the raised lip on the adapter head to hold the filter bag in place. **Connections:** NPT female.

Filter bags (sold separately) are specially constructed for use without a housing and must be used with our adapter heads. Bags have a galvanized steel ring sewn into the opening that slips over the adapter head to hold the filter bag in place. Sewn construction. Maximum temperature is 100° F. *Polyester felt* and *polypropylene felt* have a glazed exterior. *Nylon monofilament mesh* are more durable and are reusable.

Filter-Bag Seating Tool

Position your filter bags perfectly every time with this filter-bag seating tool. The rounded head pushes your bag to the bottom of the filter-bag housing, seating it completely. Made of lightweight, corrosion-resistant 6061-T6 aluminum with a T-handle. Tool measures 5″ Head Dia.×36¹³/₁₆″ Ht.

9291T44 ..... $216.67

Filter-Bag Housing Magnets

Extend the life of your filter bag by two to three times when you place one of these magnets inside your filter bag. Magnets attract ferrous metal particles away from the filter bag before they cause damage. When it's time for cleaning, slide the magnet out of the sleeve to remove the metal filings. The shell is constructed of corrosion-resistant Type 304 stainless steel, the magnet is a ceramic magnet with 25 lbs. of pull on contact. Max. temperature is 300° F.

Spin-On Hydraulic Oil Filters

3/4″ to 1 1/4″ Pipe Sizes

1 1/2″ Pipe Size with Side-by-Side Filter Cartridges

Changing filter cartridges is a snap—simply spin them on and off in seconds since there are no bolts to remove. Install these filters in return lines as well as in off-line filtration and lubrication systems. They have a Buna-N seal, a steel cartridge housing, and include one filter cartridge (two filter cartridges where noted).

All have a built-in bypass valve. When the pressure differential between the inlet and outlet reaches the set limit, indicating a clogged cartridge, the valve routes the oil away from the cartridge to prevent pressure build-up in your line.

Connections: NPT female.

Note: Filters with 1 1/2″ pipe size also have 2″ SAE 4-bolt flange ports. Horizontal bolt hole center-to-center is 3 1/16″; vertical center-to-center is 1 11/16″. Bolt holes are 1/2″-13 UNC.

Standard filters are nominal-rated and use cellulose paper media for filtering.

High-efficiency filters use fiberglass media for more precise filtering. They are absolute-rated to 99% efficiency (they'll stop 99% of particles larger than their micron rating).

Optional Filter Gauge— With a range of 0-60 psi, these gauges tell you when it's time for a new filter cartridge. Available only for 44185K series.

To Order: For filters and replacement cartridges, please specify your required micron rating from those listed.

Optional Filter Gauge for 44185K 44185K11 $21.80

■ Has two side-by-side filter cartridges. Overall width is 12 15/16″.

High-Capacity Hydraulic Oil Filters

Two concentric cartridges inside a single housing give you greater surface area, more dirt holding capability, and 50% longer life than the Spin-On Hydraulic Oil Filters on this page. These filters boast a Type 304 stainless steel cartridge and a magnetic plug for trapping ferrous particles. They are nominal rated. Use with hydraulic fluids, lube oils, and coolants. They have a Buna-N seal.

All have a bypass valve set at 25 psi. When the differential pressure between the inlet and outlet reaches 25 psi, indicating a clogged cartridge, the valve routes the flow of oil away from the cartridge to prevent pressure build-up in your line.

Connections: NPT female.

Extreme-Pressure Hydraulic Oil Filters

Rated to 3,000 psi for use in extremely high-pressure applications such as the discharge side of a pump before a hydraulic press or machine tool. A built-in side-mounting plate makes it a cinch to panel mount these filters. Mounting plate is 2 1/2″ wide with two 13/32″ dia. holes on 1 1/2″ centers. Filter cartridge is included inside a cast iron housing. Seals are Buna-N.

All have a built-in bypass valve that's set at 35 psi. When the differential pressure between the inlet and outlet reaches 35 psi, indicating a clogged cartridge, the valve routes the flow of oil away from the cartridge to prevent pressure build-up in your line.

Connections: NPT female.

Standard filter is nominal rated and uses cellulose paper media for filtering. ***High-efficiency*** filters use fiberglass media for more precise filtering. They are absolute rated to 99% efficiency (they'll stop 99% of particles larger than their micron rating).

★ Includes two replacement cartridges.

High-Flow Extreme-Pressure Hydraulic Oil Filters

High flow and super-high pressures are no match for these filters' heavy duty steel housing. Ideal for the discharge side of a pump and the return lines of hydraulic reservoir applications. They have a Buna-N seal and include a 10-micron, fiberglass-media filter cartridge, which is absolute rated to 99.9% efficiency (they'll stop 99.9% of all particles larger than 10 microns).

All have a bypass valve set at 87 psi. When the differential pressure between the inlet and outlet reaches 87 psi, indicating a clogged cartridge, the valve routes the flow of oil away from the cartridge to prevent pressure build-up in your line.

Connections: SAE straight thread O-ring fittings.

Miniature Hydraulic Oil Filters

Small size coupled with the high pressure ratings make these filters perfect for fine filtration of compact hydraulic oil lines. All have an aluminum housing, fluoroelastomer seal, and a porous bronze filter cartridge. The 1½″ hex end easily opens for cleaning and replacing cartridges. Max. temperature is 400° F. **Connections:** NPT female or SAE straight threads.

Inline filters have a max. pressure of 3,000 psi.

Elbow-style filters have a max. pressure of 5,000 psi. Overall length is 3³⁄₁₆″.

To Order: For filters and replacement cartridges, specify micron rating: 10, 25, 40, or 90 microns.

Universal-Fit Hydraulic Oil Filter Cartridges

Replace the cartridges in your Schroeder and Parker filters—these cartridges are interchangeable with both. All work well with petroleum-based hydraulic fluids and have end caps that will not corrode or separate from the cartridge.

Standard cartridges have a cellulose paper filter media. They are nominal rated.

High-efficiency cartridge has a fiberglass media and is absolute rated to 99.5% efficiency (it will stop 99.5% of particles larger than its micron rating).

Super-Capacity Hydraulic Oil Filters

An extra-long cartridge gives you more surface area for greater dirt-holding capacity and higher flow rates. These filters include a stand with three legs and ⁹⁄₁₆″ holes for easy floor mounting. Use with hydraulic and quench oils, compressor lube oils, and coolants.

Three swing bolts on the top of the filter housing secure the cover in place and provide easy access for cartridge changes. Housing is steel and seal is Buna-N. Max. pressure is 175 psi; max. temperature is 250° F. Overall diameter is 7⅝″. Designed to be used with one filter cartridge (sold separately below).

Filter cartridges have phenolic-impregnated cellulose filter media with steel construction.

Connections: 1½″ NPT male side inlet and bottom outlet; 1″ NPT male bottom drain.

Portable Electric Hydraulic Oil Filter

Move this oil filter to wherever you need filtered oil. Use it for conditioning as well as transferring petroleum-based oils, water emulsions, and diesel fuels with a viscosity of up to 16,000 SSU (a consistency close to molasses).

Filter has an aluminum housing; nitrile seal; 10-micron filter; a 5-ft. long, wire-reinforced PVC hose with 3-ft. PVC wand attachment; and a ¼-hp continuous duty motor. Motor operates on 115 VAC and has a 1-ft. power cord with three-prong plug. Max. flow is 4 gpm. Max. pressure is 50 psi; max. temperature is 120° F.

Optional water removal cartridge (sold separately) is for removing water from oil. ***Carrying case*** (sold separately) measures 24″ Lg. × 19″ Wd. × 10″ Dp. and is made of plastic. It has wheels for easy transport.

Note: Not for use with flammable liquids such as gasoline, alcohol, and solvents.

Mobile Electric Hydraulic Oil Filters

Mounted to a cart, these filters will roll wherever you need them. All are excellent for transferring and filtering fluids from machine to machine, tanks to reservoirs, and drums to tanks.

High-Flow Bag Filter

Use for filtering coolants and metalworking fluids with a viscosity up to 300 SSU (a consistency close to 10W motor oil). It has a cast iron, self-priming centrifugal pump with stainless steel impeller and Buna-N seal; steel filter housing with fluoroelastomer seal; and a filter bag basket that holds any size 12 filter bag (sold separately below and on page 398). Max. flow is 30 gpm. Max. pressure is 22.5 psi. Max. temperature is 180° F. Filter operates on 115 VAC and has a ½-hp continuous duty motor with a 6-ft. long power cord with three-prong plug. Overall size is 54″ Ht. × 22″ Wd. × 16″ Dp. Weight is 150 lbs.

Connections: 1″ quick-disconnect inlet and outlet.

Two-Cartridge Filters

Simply drop the wand into any reservoir you need filtered. The 40-micron inlet filter catches large particles while the 10-micron outlet filter grabs finer particles (cartridges are included). Well-suited for hydraulic, gear, and lube oils. Systems have a steel filter bowl, aluminum filter head, Buna-N seal, two 11-ft. PVC hose and wand assemblies (hose is 8 ft.; wand is 3 ft.), and an on/off switch. Max. pressure is 50 psi. Max. temperature is 150° F.

They operate on 115 VAC and have a continuous duty motor with a 6-ft. long power cord with three-prong plug. Overall size is 40½″ Ht. × 25½″ Wd. × 19″ Dp. Weight is 110 lbs.

Optional water removal cartridge (sold separately below) is for removing water from oil.

Compact Fuel Oil Filters

Keep oil burners operating efficiently by installing one of these filters. They're ETL (Edison Technical Labs) listed for No. 2 oil and thinner.

Filters have a Buna-N seal, a galvanized, epoxy-coated steel body, and a 10-micron, bonded cellulose fiber filter cartridge. Max. pressure is 40 psi; max. temperature is 100° F.

Connections: NPT female.

Pipe Size	Max. Flow, gpm	Port-to-Port Lg.	O'all Ht.	*Filters*		*Replacement Cartridge*

Spin-On Gasoline and Diesel Filters

Once you've installed the top cap inline, changing filter cartridges is simple—just spin off the old cartridge and spin on the new one. Filters are good for removing dirt, rust, sand, and scale from leaded and unleaded gasoline and diesel fuel, including fuels with ethanol. Filters have a die cast zinc top cap and nitrile seals. They include a 10-micron, pleated-paper filter cartridge. Max. pressure is 50 psi. Max. temp. is 150° F. **Connections:** NPT female.

Optional water-removal cartridge removes water and particles as small as 10 microns.

High-Capacity Fuel Oil Filters

A large surface area gives these filters high dirt-removing capacity. They also have a chemical-resistant, epoxy-lined interior for use with Nos. 2, 4, 5, and 6 fuel oils. They are UL listed and have a cast iron and steel housing, cellulose fiber seal, and a 1/8" NPT gauge port at the filter inlet and outlet. Max. pressure is 50 psi; max. temperature is 200° F.

Choose a filter with a Monel or wool-felt cartridge. ***Monel cartridges*** are rated at 140 microns. They are corrosion resistant and easy to clean. ***Wool-felt cartridges*** are rated at 25 microns.

Connections: NPT female.

Easy-View Gasoline and Diesel Filters

Don't guess as to when these filters are getting full—their transparent polymer bowl lets you see for yourself. Filters are excellent for removing dirt, rust, sand, and scale from diesel, leaded, and unleaded gas, including fuels with ethanol. They have a die cast zinc top cap; nitrile seals; a drain valve; and a 10-micron, pleated-paper filter cartridge. Max. pressure is 150 psi. Max. temp. is 150° F.

Connections: NPT female.

Optional stainless steel cartridges are recommended for straining larger particles. They're made of Type 304 stainless steel.

Optional water-removal cartridge removes water and particles as small as 15 microns. It won't remove water from fuels containing alcohol.

Optional Water-Removal Cartridge 4340K14 18.33

Wheel Oil Skimmers

Remove oil and grease from machine coolant sumps, parts washers, and other process tanks. A low-speed wheel breaks the surface tension of your fluid and attracts and removes oil, extending the life of your fluid and tools, and minimizing hazardous waste disposal. Oil is scraped off the wheel by two spring-loaded wiper blades and diverted to a runoff spout. For additional drainage, connect 1" ID PVC tubing (not included; see pages 119-126) to spout end.

All skimmers have a steel frame construction, 1/4" dia. mounting holes (skimmers with 8" dia. wheels have four mounting holes; all others have two), and require a 1" Wd. tank opening. Mounting hardware is not included. The length of the tank opening must equal the wheel diameter of the skimmer. They operate on 110 VAC, single phase, and have an 8-ft. power cord with three-prong plug. Oil removal capacity is 1.5 gallons per hour.

Intermittent duty skimmers are for applications requiring less than two hours of operating time per day.

Skimmers with an *acrylic wheel* have a max. temperature of 120° F; those with an *aluminum wheel* have a max. temperature of 250° F.

Corrosion-Resistant Wheel Oil Skimmer

More compact than the Wheel Oil Skimmers on this page, these also have a corrosion-resistant polyester housing. They include a 12" dia. nylon wheel and two 5/16" dia. mounting holes (mounting hardware not included). Motor is continuous duty and operates on 110 VAC, single phase. It has an 8-ft. power cord with three-prong plug. Min. tank opening is 14" Lg. × 3/4" Wd. Skimmer reach length is 4 3/16". Oil removal capacity is 1.5 gallons per hour. Max. temperature is 160° F.

Oil Skimmer	2144T51	Each	$179.20
Replacement Wheel	2144T52	Each	$109.30
Replacement Wiper Blades	2144T53	Pair	$20.59

Corrosion-Resistant Compact Belt Oil Skimmers

These skimmers have a nylon housing and a polyester belt for corrosion resistance. They require little space and a small tank opening, and oil sticks to the entire belt surface for greater efficiency than wheel skimmers. Use to remove oil from water and coolant.

Skimmers include a 1" wide belt, two wiper blades (one for each side of the belt), 3 ft. of 1/2" ID PVC return hose with a hose clamp, and two 5/16" dia. mounting holes (mounting hardware not included). Motor is continuous duty. It operates on 110 VAC, single phase, and includes an 8-ft. power cord with three-prong plug. They require a tank opening of 3" Lg. × 3" Wd. Oil removal capacity is 1 gallon per hour. Max. temperature is 140° F.

Replacement belts also include one pair of replacement wiper blades. To determine the correct size, measure your skimmer reach length or your belt circumference.

Skimmer Reach Lg.	Belt Circumference	*Skimmers*	Each	*Repl. Belts*	Each
8"	26"	2165T11	$351.17	2165T21	$80.18

Replacement Wiper Blades ..... 2165T31 Pair $4.12

Compact Belt Oil Skimmers with Timer

Operating these skimmers in a tight spot is no problem, and for energy savings, they have a 24-hour, 3-setting on/off timer. Oil sticks to the entire belt surface for more efficiency than wheel oil skimmers. All include a 1″ wide belt; a Type 304 stainless steel mounting bracket and trough; a 2-ft. Lg., 5/8″ ID, PVC return hose (unless noted); and mounting hardware. Motor is continuous duty and operates on 115 VAC, single phase. It includes a 6-ft. power cord with three-prong plug and ground fault interrupter.

To choose the correct size replacement belt, measure your skimmer reach length or belt circumference.

Standard skimmers have a ball-and-chain assembly that makes it easy to retrieve the pulley if dislodged. They require a 2″ Lg. × 3″ Wd. tank opening. Skimmers ***for 55-gallon drums*** fit into 2″ OD bung holes.

Standard with Polyurethane Belt

To Order: Specify oil removal capacity: 1/4 or 1 gallon per hour.

■ Includes a 3-ft. long, 5/8″ ID PVC return hose.

Adjustable-Angle Belt Oil Skimmer

Skim oil from shallow and odd-shaped tanks. A belt arm pivots in 15° increments left or right of center and reaches 16″ into tanks. Includes three mounting brackets—flanged wall, straight wall, and barrel—with 1/4″ mounting holes (bolts included). It requires a 2 1/2″ OD tank opening for vertical installation.

It includes a 1″ wide polyurethane belt; a 3-ft. Lg., 1/2″ ID, vinyl return hose; and two wiper blades. Belt circumference is 54″. Motor is continuous duty and operates on 120 VAC, single phase. It has a 3-ft. power cord with three-prong plug. Oil removal capacity is 1 gallon per hour. Max. temperature is 120° F (212° F for optional Type 304 stainless steel belt).

Tube Oil Skimmers for Hard-to-Reach Areas

A long loop of flexible 3/16″ OD PVC tubing snakes into places other skimmers can't reach. Mount these skimmers horizontally as well as vertically under chip conveyors, on the backs of lathes, and even on totally enclosed machines. Use to skim oil from water and coolants.

Housing is aluminum. Clamp on a tank lip or mount to the side of an enclosed machine. Skimmers require a 1/2″ Lg. × 3″ Wd. tank opening. They include a 10″ long, 1 1/4″ ID, vinyl tube for oil discharge; and three 7/32″ dia. mounting holes. Motor is continuous duty and operates on 110 VAC, single phase. It has an 8-ft. power cord with three-prong plug. Oil removal capacity is 1/4 gallons per hour. Max. temp. is 90° F.

High-Capacity Deep-Reach Belt Oil Skimmers

With a wide belt and powerful motor, these skimmers remove large amounts of oil from coolants and parts washers. A stabilizer bar between the pulleys keeps tension in the belt for maximum efficiency. They include an on/off switch; two wiper blades; a 4-ft. Lg., 1 1/4″ ID, PVC return hose; and two 3/4″ Lg. × 7/16″ Wd. mounting slots. Motor is continuous duty and operates on 115 VAC, single phase. It has an 8-ft. power cord with three-prong plug. Housing is steel. Max. temperature is 180° F.

To choose the correct size replacement belt, measure your skimmer reach length or belt circumference.

6 Gallons per Hour Capacity— Include a 2″ wide steel belt and require a 6″ Lg. × 6″ Wd. tank opening.

12 Gallons per Hour Capacity— Include a 4″ wide steel belt and require an 8″ Lg. × 8″ Wd. tank opening.

High-Efficiency Tube Oil Skimmers

These skimmers have a 1/4″ OD urethane-based tube and rugged motor and housing to give you high-efficiency oil removal without removing your process liquid. They remove 4-20 gallons per hour of oil, fat, grease, and sludge from your process. Great in food processing applications to remove animal fat from process washdowns. Skimmers require a 12″ Lg. × 1″ Wd. tank opening and 1″ ID return tube (not included). They are furnished mounted to a 1 1/2″ × 4 1/2″ aluminum extrusion with a 5/16″ T-slot width. For T-nuts, see 47065T97 on page 1922. Motor is continuous duty and operates on 115 VAC, single phase. Includes a conduit box with leads for hardwiring. Housing is aluminum. Max. temperature is 150° F.

Magnetic Separators

Rectangular Separator; For Sticky Materials

Round Separator; For Dry Materials

Pull ferrous metal scrap and particles out of your process media. Mount separators inside gravity hoppers, chutes, drawers, housings, and surge-and-catch bins. Magnets are sealed in 1″ dia. rods; gap between rods is 1″.

Separators for large particles catch nails, bolts, washers, staples, and other ferrous metal objects. Magnets are ceramic; rods and frame are Type 304 stainless steel. Max. magnetic pull on contact is 1 lb.

Separators for small particles catch metal filings, shavings, residue from metal wear, and other fine particles. Magnets are rare-earth (neodymium-iron-boron); rods and frame are Type 316 stainless steel. Max. magnetic pull on contact is 11.2 lbs.

For Sticky Materials— Separators are designed without guide rods to prevent material from sticking and blocking flow.

For Dry Materials— Separators have guide rods to direct flow to the magnetic rods. They're ideal for use with fine powders and in low-flow applications.

Replacement Rods for Magnetic Separators

Replace individual rods in an existing separator or create a custom separator. Magnets are sealed in a 1″ dia. rod with a 1/4″-20 mounting hole on each end.

Rods for large particles catch nails, bolts, washers, staples, and other ferrous metal objects. Magnets are ceramic and rod is Type 304 stainless steel. Max. magnetic pull on contact is 1 lb.

Rods for small particles catch metal filings, shavings, residue from metal wear, and other fine particles. Magnets are rare-earth (neodymium-iron-boron) and rod is Type 316 stainless steel. Max. magnetic pull on contact is 11.2 lbs.

Quick-Clean Magnetic Separators

Don't struggle to remove ferrous particles that are stuck to your separator—pull these magnetic rods from their sleeve to release debris. They catch fine particles such as metal filings, shavings, and residue from metal wear. Mount separators inside gravity hoppers, chutes, drawers, housings, and surge-and-catch bins. Magnets are sealed in 1″ dia. rods; gap between rods is 1″. Magnets are rare-earth (neodymium-iron-boron); rods, frame, and sleeve are Type 316 stainless steel. Max. magnetic pull on contact is 7.7 lbs.

Heavy Duty Plate Magnetic Separators

Direct-Mount Separator

Extract ferrous metal debris from process media as it moves through chutes and hoppers. Mount flush with the surface of your container; position below the flow of material. Magnets are ceramic and housing is welded steel. Max. magnetic pull on contact is 2.5 lbs. Mounting holes are 5/16″; hardware is not included.

Direct-mount separators bolt directly to chutes and hoppers. Can also be installed up to 3″ above conveyor belts.

Hinged-mount separators provide access to clean the magnetic surface. You can also mount as a door on chutes and hoppers.

Magnetic Separators for Coolant

Keep coolant systems free of small ferrous particles, such as chip filings and metal dust. Separators have rare-earth (neodymium-iron-boron) magnets that are sealed in a Type 304 stainless steel rod. Housing is aluminum and seal is Buna-N. Max. magnetic pull is not rated. Max. temp. is 150° F. Connections are NPT female.

Pipe Size	Max. psi	Ht.	Dia.		
1/2	200	6 3/16″	4 5/8″	57625K14	$311.38

Oil-Mist-Eliminating Filters

Stop oil and smoke from exhausting into your environment. Often used with small oil-sealed vacuum pumps, these remove 99% of particles down to 0.3 micron. Filters have a nickel-plated steel housing and a fiberglass element that's reinforced with epoxy-coated steel wire. Max. pressure is not rated. Max. temp. is 220° F. Connection is NPT male.

For information about wire cloth, see page 409.

High-Precision Sieves

Made from precision-tolerance wire cloth so you get accurate, repeatable results in testing and laboratory applications. Sieves with a brass frame conform to ASTM E11, ANSI, ISO, and NBS (National Bureau of Standards). Sieves with a Type 316 stainless steel frame meet ASTM E11 and ISO. Extended bottoms (skirts) are matched to fit all frames, pans, and separator bottoms with the same diameter; stack sieves with the same diameter for multiple stages of sifting.

Optional cover keeps foreign material from entering the sieve, and also retains samples while sieving.

Optional bottom pan lets you catch and transport material that falls through the sieve.

Shakers for High-Precision Sieves

Compact

Multidiameter

These versatile sieve shakers give more consistent results than hand sieving. Shakers operate on 115 VAC, 60 Hz. Sieves (not included) are sold separately on page 407. See the chart for the max. number of sieves at each depth that can be used with each shaker.

Compact shaker has a 1/20 hp motor, a vibrating baseplate, a red painted steel and aluminum body, and a 5-ft. power cord with a two-prong plug.

Multidiameter shakers vibrate both vertically and horizontally for greater efficiency. Mount on a solid and stable surface. Shakers have a 1/4 hp motor, a green painted steel body, 5-ft. power cord with a three-prong plug, and a 30-minute timer. They meet ASTM C136.

0.5″	3109K15	28.89			

Rugged-Duty Hand Sieves

Made with thick Type 304 stainless steel wire cloth, these 18″ Dia.×4″ Dp. sieves are ideal for separating large, abrasive sediment such as rocks and gravel. Frames are galvanized steel.

Stainless Steel Separating Screens

Side View

Fit these screens in standard Sweco, Rotex, and Kason vibratory shakers. Frame and screen are made of Type 304 stainless steel bolting-grade wire cloth for sifting nonabrasive materials such as flour, grain, and pulverized metal. Screen is tensioned for flatness and bonded to the lipped frame for consistent sifting and long life.

To Order: Please specify mesh size from those listed in the chart.

Hook-On Stainless Steel Separating Screens

Style A Side View

Style B Side View

Installing and mounting these screens is easy; they have galvanized steel hooks on two sides and fit in most shaker and separator machinery, including Mogensen Sizers and Midwestern Separators. Their corrosion-resistant Type 304 stainless steel screen is securely attached to the hooks to withstand vibrations and provide long life. Screens do not have sharp edges. Use in heavy duty sifting applications with more abrasive material.

To Order: Please specify mesh size from those listed in the chart.

Ultra-Fine Filtering Type 316L Stainless Steel Porous Discs

Also known as frits or sintered filters, these corrosion-resistant Type 316L stainless steel discs have micron-rated pores for fine filtering. Use in laboratories and gas-bubbling applications (sparging).

To Order: Please specify micron rating: 2, 5, 10, 20, or 40 microns.

About Wire Cloth

When ordering wire cloth, you must consider *mesh*, *wire diameter*, and *opening width*. Mesh is expressed by one of two different terms: *distance between wires* or *mesh size*.

Distance between wires is the distance between the centers of two parallel wires.

Mesh size is the number of openings within a linear inch of the wire cloth. This dimension is expressed as two numbers; for example, 3×3 mesh size means there are three openings horizontally and three openings vertically in one square inch.

Wire diameter indicates the thickness of the wire. ***Opening width*** refers to the actual open space between parallel wires. Within wire cloth of the same mesh size, as the wire gets thinner, its flexibility increases and the opening width and open area dimensions get larger. For example, 3×3 mesh with a 0.120″ wire diameter has an opening width of 0.213″ and open area of 40.8%. Compare that to 3×3 mesh with a thinner, more flexible 0.047″ wire diameter. It has an opening width of 0.286″ and an open area of 73.6%.

Note: If using wire cloth for filtration, it is important to choose wire cloth with an opening width smaller than the particles or sediment that you wish to remove.

3×3 Mesh (Actual Size)

Types of Wire Cloth

Woven— Most commonly used and available in the widest variety of sizes. Ideal for particle retention and the construction of filter support screens, basket liners, and wire partitions.

Dutch Weave— Dense and strong with small, irregular, and twisting passageways for very fine filtering.

Welded— Wires are welded at the joints to keep cloth straight, uniform, and fray resistant. Very strong and rigid.

Space Cloth— Heavy duty cloth with thick wire diameters and large square openings for maximum uniformity. Measured by space size (same as opening width).

Crimped— Wires are crimped to secure them in place and ensure accurate and rigid screen openings.

Examples of Wire Cloth Mesh Sizes (Actual Size)

4×4 Mesh, 0.047″ Wire Dia.

8×8 Mesh, 0.028″ Wire Dia.

20×20 Mesh, 0.016″ Wire Dia.

40×40 Mesh, 0.010″ Wire Dia.

80×80 Mesh, 0.0055″ Wire Dia.

For information about wire cloth, including examples of particle sizes, go to mcmaster.com and search for **9231TAC**.

Wire Cloth Sample Packs and Assortments

All sample packs and assortments include one each of the mesh sizes listed and are made of Type 304 stainless steel for good corrosion resistance, except for 9231T15, which is made of steel.

Sample packs contain small pieces of wire cloth for comparing different mesh types and sizes. Each piece is labeled with its dimensions.

Assortments include a variety of mesh sizes in usable sheet sizes, making them ideal for maintenance work and research projects.

Woven and Welded Sample Pack ..... **9231T44** **Each** $82.57

Woven Wire Diameters Sample Pack

Compare the opening widths and flexibility of wire cloth with the same mesh size but different wire diameters. Includes one 4½″×4½″ sheet each of 20×20 mesh with wire diameters of 0.009″, 0.014″, and 0.023″.

Woven Wire Diameters Sample Pack ..... **9231T13** **Each** $7.65

Space Cloth/Crimped Types Sample Pack

Compare the construction and rigidity of three types of space cloth. Includes one 4½″×4½″ steel sheet each of standard space cloth, extra-rigid crimped space cloth, and super-rigid crimped space cloth.

Space Cloth/Crimped Types Sample Pack ..... **9231T15** **Each** $15.31

For information about wire cloth, see page 409.

Corrosion-Resistant Type 304 Stainless Steel Woven Wire Cloth

Made of Type 304 stainless steel for good corrosion resistance; cloth is offered in a wide range of mesh sizes and wire diameters. Ideal for particle retention and the construction of filter support screens, basket liners, and wire partitions.

To Order: For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify 36″ or 48″ wide (unless noted), length needed, and number of pieces. Max. continuous length is 100 linear feet, unless noted.

■ Not offered in 36″ width. ▲ Not offered in 48″ width.

Particle-Sifting Type 304 Stainless Steel Woven Wire Cloth

Also known as milling grade, this wire cloth has a thinner wire diameter and larger open area than the corrosion resistant Type 304 stainless steel wire cloth on pages 410 and 411. It also can process abrasive material and capture small particles. Ideal for sifting gritty, dry material. Made of Type 304 stainless steel for good corrosion resistance.

To Order: For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify 36″ or 48″ wide (unless noted), length needed, and number of pieces. Max. continuous length is 100 linear feet.

■ Not offered in 36″ width.

High-Volume Particle-Sifting Type 304 Stainless Steel Woven Wire Cloth

Also known as bolting grade, this cloth has ultra-thin wire and a large percentage of open area for letting through coarse, dense material. Ideal for high-volume sifting of nonabrasive materials, such as flour, grain, and pulverized metal. Made of Type 304 stainless steel for corrosion resistance.

To Order: For ***sheets***, please specify 12″×12″ or 12″×24″. For ***cut-to-length pieces***, please specify 36″ or 48″ wide, length needed, and number of pieces. Max. continuous length is 100 linear feet.

Precision-Mesh Type 304 Stainless Steel Woven Wire Cloth

Made to extremely tight tolerances for critical applications, use these screens for consistent particle retention in vibratory shakers and sieves. Made of Type 304 stainless steel for good corrosion resistance. **To Order:** For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify length needed and number of pieces. Max. continuous length is 100 linear feet.

Corrosion-Resistant Type 304 Stainless Steel Woven Wire Cloth Discs

Made of Type 304 stainless steel for good corrosion resistance, use these convenient discs to replace screens in extruder machines and for inline filtering in pipes.

Discs with diameters from 1/2″ to 3 9/16″ are sold in packs of 25 (unless noted), diameters 4″ to 4 9/16″ are sold in packs of 10, and diameters 5″ to 12″ are sold in packs of 2.

Type 304 Stainless Steel Woven Wire Cloth Extruder Discs

Replace the wire cloth screens in the vanes of your Gneuss and Kreyenborg extruding machines. These discs consist of multiple layers of corrosion-resistant Type 304 stainless steel wire mesh for micron-rated fine filtering (for more information about micron ratings, see page 390).

Micron Rating	Overall Dia.		Each
315	2 3/8″	9544T15	$5.88
250	1 15/16″	9544T12	3.53
250	2 3/8″	9544T14	3.97
100	2 3/8″	9544T13	4.86
75	1 15/16″	9544T11	4.41

♦ Prices are 10%-20% lower when you buy 60 square feet or more.

For information about wire cloth, see page 409.

Ultrafine-Filtering Type 304 Stainless Steel Dutch-Weave Wire Cloth

Dutch weave produces a strong and firm mesh which can be used in high-pressure and high-flow applications requiring fine, accurate filtering or particle separation. This wire cloth is micron rated (for information about micron ratings, see page 390) and made of Type 304 stainless steel for good corrosion resistance. Cloth is available in two weave styles: ***Plain Dutch weave*** is similar to a basket weave. The weave wires wrap alternately over and under each base wire. ***Twill Dutch weave*** is a tighter weave than the Plain Dutch. The weave wires wrap alternately over two and under two base wires. This weave provides the finest particle retention available in a wire cloth.

To Order: For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify length needed and number of pieces. Max. continuous length is 100 linear feet.

★ Width is 36″.

Easy-to-Form Type 304 Stainless Steel Welded Wire Cloth

This strong and rigid cloth is welded at the joints to keep the wires straight and the opening sizes uniform. Use to fabricate baskets, trays, guards, and laboratory equipment. Made of Type 304 stainless steel for good corrosion resistance.

To Order: For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify 36″ or 48″ wide, length needed, and number of pieces. Max. continuous length is 100 linear feet.

Large-Opening Type 304 Stainless Steel Space Cloth

Space cloth has large square openings made from relatively large diameter wire for high rigidity. Ideal for screening large, abrasive material such as rocks and gravel. Made of Type 304 stainless steel for good corrosion resistance.

Space size refers to the actual open space between parallel wires.

To Order: For ***sheets***, please specify 12″×48″, 24″×48″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify length needed and number of pieces. Max. continuous length is 100 linear feet.

♦ Prices are 10%-20% lower when you buy 60 square feet or more.

For information about wire cloth, see page 409.

Extra-Rigid Type 304 Stainless Steel Crimped Space Cloth

Crimps between intersecting wires keep them in place, making the cloth more rigid and the spacing more accurate than standard wire cloth. Good for machine guards, barriers, shields, and dividers. Made of Type 304 stainless steel for good corrosion resistance. Space size refers to the actual open space between parallel wires. **To Order:** Please specify sheet size: 36″×48″, 36″×60″, 48″×48″, or 48″×60″.

Slotted-Opening Type 304 Stainless Steel Woven Wire Cloth

Long, slotted openings make this wire cloth ideal for processing elongated particles. It offers good strength and durability for wet and dry screening of abrasive materials, such as sand, gravel, and limestone. Made of Type 304 stainless steel for good corrosion resistance. **To Order:** For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify length needed and number of pieces. Max. continuous length is 100 linear feet.

Super-Corrosion-Resistant Type 316 Stainless Steel Woven Wire Cloth

Due to its molybdenum content, Type 316 stainless steel woven wire cloth has greater resistance to chemical corrosion compared to wire cloth made of Type 304 stainless steel. **To Order:** For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify 36″ or 48″ wide (unless noted), length needed, and number of pieces. Max. continuous length is 100 linear feet, unless noted.

Particle-Sifting Type 316 Stainless Steel Woven Wire Cloth

Also known as milling grade, this wire cloth has a thinner wire diameter and larger open area than the super-corrosion-resistant Type 316 stainless steel wire cloth on pages 414 and 415. It also can process abrasive material and capture small particles. Ideal for sifting gritty, dry material. Made of Type 316 stainless steel for excellent corrosion resistance. **To Order:** For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify 36″ or 48″ wide (unless noted), length needed, and number of pieces. Max. continuous length is 100 linear feet.

High-Volume Particle-Sifting Type 316 Stainless Steel Woven Wire Cloth

Also known as bolting grade wire cloth, this features ultra-thin wire with a large open area for letting through coarse, dense material. Ideal for high-volume sifting of nonabrasive materials such as flour, grain, and pulverized metal. Made of Type 316 stainless steel for excellent corrosion resistance.

To Order: For ***sheets***, please specify 12″×12″ or 12″×24″. For ***cut-to-length pieces***, please specify 36″ or 48″ wide, length needed, and number of pieces. Maximum continuous length is 100 linear feet, unless noted.

★ Max. continuous length is 50 linear feet.

Ultrafine-Filtering Type 316 Stainless Steel Dutch-Weave Wire Cloth

This micron-rated plain dutch weave wire cloth is ideal for fine, accurate filtering (for information about micron ratings, see page 390). The weave wires wrap alternately over and under each base wire, producing a strong and firm mesh for use in high-pressure and high-flow applications. Made of Type 316 stainless steel for excellent corrosion resistance.

To Order: Please specify sheet size: 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″.

♦ Prices are 10%-20% lower when you buy 60 square feet or more.

For information about wire cloth, see page 409.

Easy-to-Form Type 316 Stainless Steel Welded Wire Cloth

Welded at the joints to keep wires straight, uniform, and fray resistant. This creates a strong and rigid cloth to fabricate baskets, trays, guards, and laboratory equipment. Made of Type 316 stainless steel for excellent corrosion resistance.
To Order: For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify 36″ or 48″ wide, length needed, and number of pieces. Max. continuous length is 100 linear feet.

Steel Woven Wire Cloth

This uncoated plain steel wire cloth is stronger than stainless steel, making it a good choice for applications in which corrosion is not a concern. Ideal for filtering hydraulic oil. **To Order:** For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify 36″ or 48″ wide (unless noted), length needed, and number of pieces. Max. continuous length is 100 linear feet (unless noted).

★ Max. continuous length is 50 linear feet. ■ Not offered in 48″ width.

Steel Crimped Space Cloth

Crimps between intersecting wires keep them in place, making the cloth more rigid and the spacing more accurate than standard wire cloth. Use this plain steel wire cloth for applications in which corrosion is not a concern. Space size refers to the actual open space between parallel wires.

Extra Rigid— Crimped at and between wire intersections for added strength. Good for fabricating machine guards, barriers, shields, and dividers.

Super Rigid— Deep crimps around the intersecting wires hold wires securely in place for maximum accuracy, uniformity, and rigidity. Ideal for heavy duty screening.

To Order: Please specify sheet size: 36″×48″, 36″×60″, 48″×48″, or 48″×60″.

♦ Prices are 10%-20% lower when you buy 60 square feet or more.

For information about wire cloth, see page 409.

Large-Opening Steel Space Cloth

Space cloth has large square openings made from relatively thick diameter wire for a large percentage of open area and good rigidity. Ideal for screening large, abrasive material such as rocks and gravel.

Space size refers to the actual open space between parallel wires.

Plain steel is a low-carbon material, making it ideal for applications in which corrosion is not a concern.

Alloy steel is a high-carbon material, giving it higher tensile strength and longer life than the plain steel.

To Order: For ***sheets***, please specify 12″×48″, 24″×48″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify length needed and number of pieces. Max. continuous length is 100 linear feet, unless noted.

♣ Max. continuous length is 12 linear feet.

Weather-Resistant Galvanized Steel Woven Wire Cloth

Galvanizing gives steel good corrosion resistance to exposure to weather. Cloth is galvanized after it is woven, except mesh sizes ¾″ and 12×12 through 24×24, which are galvanized before the cloth is woven.

To Order: For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 36″×36″, 36″×48″, or 48″×48″. For ***cut-to-length pieces***, please specify 36″ or 48″ wide, length needed, and number of pieces. Max. continuous length is 100 linear feet.

1½″	0.120″	85.7%	9327T24	97.25	115.73	116.70	138.09

♦ Prices are 10%-20% lower when you buy 60 square feet or more.

For information about wire cloth, see page 409.

Easy-to-Form Galvanized Steel Welded Wire Cloth

Also known as hardware cloth, this is welded at the joints to keep the wires straight and the opening sizes uniform even after forming to shape. Use to fabricate bird screens, guards, barriers, and other protective screens. All cloth is galvanized after welding with a weather-resistant coating of zinc, except for 8×8 mesh, which is woven then galvanized.

To Order: Please specify width from those available in the table, length needed, and number of pieces. Maximum continuous length is 100 linear feet.

Epoxy-Coated Steel Woven Wire Cloth

This wire cloth is epoxy coated and has small wire diameters. The black epoxy coating protects the steel from corrosion, adds rigidity, and extends its life. Use in filter cartridges. **To Order:** For ***sheets***, please specify 12″×12″ or 12″×24″. For ***cut-to-length pieces***, please specify length needed and number of pieces. Maximum continuous length is 100 linear feet.

Extra-Rigid Aluminum Crimped Space Cloth

Crimps between the intersecting wires make this wire cloth rigid with accurate open space between wires. Good for machine guards, barriers, shields, and dividers. Made of lightweight and corrosion-resistant aluminum.

Space size refers to the actual open space between parallel wires.

To Order: Please specify sheet size: 36″×48″, 36″×60″, 48″×48″, or 48″×60″.

♦ Prices are 10%-20% lower when you buy 60 square feet or more.

For information about wire cloth, see page 409.

Corrosion-Resistant Brass Woven Wire Cloth

A high percentage of zinc makes brass stronger than copper. It also resists water and many saltwater solutions. *Note:* For window and insect screening, see page 2876. **To Order:** For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 24″×36″, or 36″×36″. For ***cut-to-length pieces***, please specify length needed and number of pieces. Max. continuous length is 100 linear feet.

Corrosion-Resistant Bronze Woven Wire Cloth

Bronze is well suited for exposure to most environments. Its high copper content makes it more corrosion resistant than brass. It is also harder and stronger than copper. *Note:* For window and insect screening, see page 2876.

To Order: For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 24″×36″, or 36″×36″. For ***cut-to-length pieces***, please specify length needed and number of pieces. Max. continuous length is 100 linear feet, unless noted.

★ Max. continuous length is 50 linear feet. ● Material is phosphor bronze.

Electrically Conductive Copper Woven Wire Cloth

Copper is an excellent conductor of heat and electricity. It's nonmagnetic, nonsparking, and rust resistant. *Note:* For window and insect screening, see page 2876. **To Order:** For ***sheets***, please specify 12″×12″, 12″×24″, 24″×24″, 24″×36″, or 36″×36″. For ***cut-to-length pieces***, please specify length needed and number of pieces. Max. continuous length is 100 linear feet.

♦ Prices are 10%-20% lower when you buy 60 square feet or more.

Precision Woven Mesh

Material is woven with monofilament fibers (single threads) with accurate diameters, resulting in a mesh with precise openings that resists clogging and is easy to clean.

Nylon mesh is more abrasion resistant than polyester. Maximum temperature is 239°F. Color is opaque to translucent white. Maximum length is 150 ft.

Polyester mesh has better strength in wet conditions than nylon. Maximum temperature is 260°F. Color is opaque to translucent white. Maximum length is 150 ft.

Polypropylene mesh has good chemical resistance and is excellent for working with materials that bind up most metal screens. Maximum temperature is 194°F. Color is opaque to translucent white. Maximum length is 180 ft. 9275T63 is FDA compliant.

PEEK mesh is FDA compliant and has the best chemical and temperature resistance of all the woven mesh we offer. Maximum temperature is 475°F. Color is opaque amber. Maximum length is 150 ft.

Polypropylene Mesh Assortments

These sheets are ideal for filtering, sizing, repairing, testing, and evaluating material. Choose from large-, medium-, and small-opening mesh assortments. The assortments contain one each of the mesh openings per square inch listed. Maximum temperature is 194°F. Color is opaque to translucent white. Sheet size is 12″×12″.

6-Piece Large-Opening Mesh Assortment— Includes the following mesh openings: 5.8×5.8, 9.1×9.1, 10.2×10.2, 14×14, 17.3×17.3, and 20.3×20.3.

93245T21 ..... **Each** $119.40

6-Piece Medium-Opening Mesh Assortment— Includes the following mesh openings: 22.9×22.9, 26.9×26.9, 31×31, 35×35, 41×41, and 51×51.

93245T22 ..... **Each** $113.76

6-Piece Small-Opening Mesh Assortment— Includes the following mesh openings: 56×56, 69×69, 76×76, 98×98, 110×110, and 121×121.

93245T23 ..... **Each** $113.76

Large-Opening Mesh

Medium-Opening Mesh

Small-Opening Mesh

Polyester Mesh Discs

Polyester mesh has good strength in wet conditions. Maximum temperature is 260°F. Color is opaque to translucent white.

Plastic Mesh

Unlike woven material, extruded plastic mesh will not unravel. Mesh is not micron rated.

Polyethylene mesh is flexible and suitable for indoor and outdoor use. Maximum temperature is 200° F. Color is black except 9314T21, which is white.

Polypropylene mesh is rugged, FDA compliant, and ideal for tough applications such as screening and material handling, as well as parts separation and protection. Maximum temperature is 200° F. Color is off-white.

PTFE mesh is suitable for high-temperature applications. It provides good chemical resistance and is FDA compliant for food contact. Maximum temperature is 500° F. Color is white.

To Order: Please specify length in 5-ft. increments up to the maximum length listed.

Polyester Filtering Fabric

Ideal for filtering water, light oil, and various coolants (water soluble and synthetic) in metal polishing, grinding, finishing, and honing operations. Fabric can also be used on filter systems driven by gravity, pressure, or vacuum action, as well as for filtering air and petroleum. Color is white. Furnished in 50-yd. rolls.

Rayon/Polyester Blend (Unifil)—Use in gravity coolant applications. Maximum temperature is 250° F.

100% Polyester (Reemay)—FDA compliant with high strength when wet and dry. Maximum temperature is 300° F.

Thermoplastic Perforated Sheets

Staggered Hole Pattern

Flexible Polypropylene—More flexible than PVC, polypropylene resists organic solvents and degreasing agents, has high tensile strength, and resists impact and abrasion. Max. temp. is 200° F. Color is off-white.

High Strength PVC (Polyvinyl Chloride)—A Type I, Class I material that meets Fed. Spec. LP-535E and ASTM D1784. PVC has higher tensile strength and greater impact and abrasion resistance than polypropylene. Max. temp. is 140° F. Color is dark gray.

About Perforated Metal

Perforated metal is manufactured with hole patterns which are uniform and accurate in size. The surface is smooth and easy to clean. Perforated metal is well suited for architectural work, light construction, sorting, separating, and fabricating custom parts. It's also ideal for machine guards, ventilating grills, and acoustical supports.

These hole size illustrations are actual size and can help you determine the correct opening for your requirements.

Steel Perforated Sheets

A good economical choice for general purpose applications. This low carbon steel is rigid, yet is easy to form and cut. Sheets are 36″×40″, except where noted.

Alloy 260 Brass and Type 304 Stainless Steel Narrow-Width Perforated Rolls

Roll width is 24″. Maximum continuous length is 50 linear feet.
Alloy 260 brass is a soft material with good corrosion resistance.
Type 304 stainless steel is abrasion resistant and more corrosion resistant than brass. It stands up to outdoor exposure and high temps.

Type 316 Stainless Steel Micro-Perforated Sheets

Produced from a photochemical machining process, these high-quality sheets have precise hole size, shape, and placement. Smooth edges minimize particle entrapment and bacterial contamination. Sheets have a staggered hole pattern and offer excellent chemical and corrosion resistance. The minimum perforated area is 18″×21″. Overall sheet size will vary.

Activated-Carbon Filter Felt

Easier to handle and less messy than activated-carbon granules, these sheets can be used to purify and remove odor from liquids, as well as for air purification and respiratory protection. They can be cut-to-size and inserted in fillable cartridges (see 9007T on page 388). Max. temperature is not rated. Color is black.

Multipurpose Filter Paper

Cut these convenient sheets to any size and shape you need. Or, pleat them to make your own sediment-removal cartridge. Made of 100% synthetic fibers with no binders or adhesives. Package quantity is 6. Color is white. ***Polypropylene*** has a max. temperature of 145° F. ***Polyester*** has a max. temperature of 210° F.

Lab-Testing Ultra-Fine Filter Paper

Ideal for laboratory filtration. All readily absorb water (hydrophilic) and can be sterilized with steam (autoclave). Color is white. ***Glass-fiber*** filter paper has high holding capacity and strength, even when wet. Use for first-stage filtration, analytical testing, and sample cleanup. Max. temperature is 1022° F. ***Cellulose-fiber*** filter paper is good for air monitoring and microbiological analysis. Max. temperature is 165° F.

Lab-Testing Cellulose Filter Paper

Disc

Pleated Disc

All are made of super-refined cellulose and can be used for a variety of filtering tasks. Max. temperature is not rated. Package quantity is 100. Color is white.
Pleated discs have a large surface area for fast filtration and high dirt retention.
Smooth-surface filters are made of cellulose and fine cotton fibers. They are ideal for separating and identifying substances in a mixture.

About Ball Valves

Reliable and simple to use, valves provide on/off control in your pipeline. Just a quarter turn of the handle opens or closes the valve.

Determining Pipe Size of Your Valve: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and find the corresponding pipe size listed in the chart.

Threaded ID or OD	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″

Brass Ball Valves

NPT:
- Max. Pressure for Water, Oil, and Inert Gas: 1/4″-2″: 600 psi @ 100°F; 2 1/2″-4″: 450 psi @ 100°F
- Max. Pressure for Steam: 150 psi @ 366°F
- Temp. Range: –50° to +400°F
- Vacuum Rating: 29.9″ Hg

Solder End (Unthreaded) When Used with 95/5 Solder:
- Max. Pressure for Water, Oil, and Inert Gas: 1/2″-1″: 500 psi @ 100°F; 1 1/4″-2″: 400 psi @ 100°F; 2 1/2″-3″: 300 psi @ 100°F
- Max. Pressure for Steam: 15 psi @ 250°F
- Temp. Range: 0° to 250°F
- Vacuum Rating: 29.9″ Hg

The choice for simple on/off control in general applications. Body is brass, ball is chrome-plated brass, and seats are PTFE. Valves have unrestricted flow (full port). *Valves with up to 2″ pipe size* or *tube size* are UL and C-UL certified.

NPT—Female×female have a fluoroelastomer seal, except t-handle valves, which have a PTFE seal. All are CSA and CSA-US certified. *Valves with up to 2″ pipe size* are FM approved. ***Male×female*** have PTFE packing. *Valves with up to 2″ pipe size* are CSA and CSA-US certified and FM approved.

Solder End (Unthreaded)— Packing is PTFE. Valves meet ANSI B16.22.

Lockable valves can be locked in position using a padlock (not included) with shackle diameter of 9/32″. ***Spring-close lever valves*** close automatically when the lever is released to ensure your valve is open only when an operator is present. ***T-handle*** and ***lockable oval*** are snag resistant; handle does not turn when bumped.

For information about ball valves, see page 426. For information about pipe size, see pages 2-3.

NSF-Certified Brass Ball Valves for Drinking Water

NPT:
- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 100° F
- Max. Pressure for Steam is 150 psi @ 366° F
- Temp. Range: –50° to +400° F
- Vacuum Rating: 29.9″ Hg

Solder End (Unthreaded) When Used with 95/5 Solder:
- Max. Pressure for Water, Oil, and Inert Gas:
  1/2″-1″: 500 psi @ 100° F; 1 1/2″-2″: 400 psi @ 100° F
- Max. Pressure for Steam is 15 psi @ 250° F
- Temp. Range: –50° to +250° F
- Vacuum Rating: 29.9″ Hg

These valves are NSF 61 certified for use with drinking (potable) water in all states as of September 1, 2010. Connections are female. Body is brass, ball is chrome/nickel-plated brass, and seats are PTFE. All have PTFE packing. Valves have unrestricted flow (full port).

Solder end (unthreaded) valves meet ANSI B16.22.

Safety Air-Exhaust Brass Ball Valves

- Max. Pressure for Air:
  1/4″-1″: 200 psi @ 210° F
  1 1/4″-2″: 200 psi @ 72° F
- Max. Pressure for Steam: Not rated
- Temp. Range: 1/4″-1″: –40° to +350° F
  1 1/4″-2″: 15° to 210° F
- Vacuum Rating: Not rated

Meet OSHA requirements for safety and control in your compressed air system. When closed, these valves vent air pressure through the exhaust port on the bottom so you can disconnect air tools safely.

Connections are NPT female. Body is brass and ball is chrome-plated brass. Seats, seals, and packing are PTFE. The handle can be locked in the shut-off position using a padlock (not included) with shackle diameter of 9/32″. *Valves with 1/4″ through 1″ pipe sizes* have a 10-32 threaded exhaust port and slightly restricted flow (standard port). *Valves with 1 1/4″ through 2″ pipe sizes* have a 1/4″ NPT threaded exhaust port and unrestricted flow (full port).

Brass Ball Valves with Easy-Access Strainer

- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 358° F
- Temp. Range: –40° to +365° F
- Vacuum Rating: Not rated

Remove debris or replace the screen without disconnecting your pipeline. Valves have an integral Y-strainer with a Type 304 stainless steel 50-mesh screen to keep liquids particle free. Connections are NPT female. Body is brass, ball is chrome-plated brass, seats are PTFE, and seals are fluoroelastomer. Valves have unrestricted flow (full port).

Pipe Size	End-to-End Lg.	Valves	Each	Replacement Screens	Each

Hot-Water NSF-Certified Brass Ball Valves

NPT:
- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 212° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: –40° to +366° F

Solder End (Unthreaded) When Used with 95/5 Solder:
- Max. Pressure for Water, Oil, and Inert Gas:
  1/2″-1″: 500 psi @ 100° F; 1 1/4″-2″: 400 psi @ 100° F
- Max. Pressure for Steam: 15 psi @ 250° F
- Temp. Range: 0° to 250° F

These valves are tested at 180° F for use with hot water. All are NSF 61 certified for use with drinking (potable) water in all states as of July 1, 2010. Connections are female. Body is brass and ball is tin-coated brass. Seats, seal, and packing are PTFE. Valves have unrestricted flow (full port).

NPT valves are UL listed for use with LP gas, CSA and CSA-US certified, and FM approved.

Cleaned and Bagged High-Vacuum Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas:
  1/4″-1″: 600 psi @ 200° F;
  1 1/4″-2″: 400 psi @ 100° F
- Max. Pressure for Steam: 149 psi @ 365° F
- Temp. Range: –20° to +400° F
- Vacuum Rating: 29.9″ Hg (10^{-2} torr)

Ideal for high-purity applications, these high-vacuum valves come cleaned and bagged. The bolted-body design provides strength for superior leak resistance and a long service life. Connections are NPT female. Body is brass and ball is Type 316 stainless steel. Seats, seal, and packing are PTFE. Valves have slightly restricted flow (standard port). UL and C-UL listed.

LP and Natural Gas Brass Ball Valves

- Max. Pressure for LP and Natural Gas: 5 psi
- Max. Pressure for Steam: Not rated
- Temp. Range: –40° to +125° F
- Vacuum Rating: Not rated

Perfect for your low-pressure gas applications, these valves are CSA and CSA-US certified for low-pressure liquefied petroleum (LP) and natural gas service and are UL listed. Body is brass, ball is chrome-plated brass, and seats and packing are PTFE. Valves have slightly restricted flow (standard port). For information about flared tube fittings, see page 180.

▲ Flare size is 1/8″ less than pipe size.

Brass Ball Valves

For information about ball valves, see page 426. For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″

Elbow Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 250 psi @ 250° F
- Max. Pressure for Steam: 150 psi @ 350° F
- Temp. Range: –50° to +350° F
- Vacuum Rating: 29″ Hg

Make it easier to service your pipeline by adding on/off control at 90° bends. Connections are NPT. Body is brass and ball is chrome-plated brass. Seats, seal, and packing are PTFE. Valves have unrestricted flow (full port).

Brass Ball Valves with Yor-Lok Fittings

A&C **B**

- Max. Pressure for Water, Oil, and Inert Gas: See table
- Max. Pressure for Steam: Not rated
- Temp. Range:
  Styles A&B: –40° to +300° F
  Style C: –30° to +400° F
- Vacuum Rating: 29″ Hg

Get a leak-free compression seal between your valve and tubing. Connections are Yor-Lok double-ferrule compression tube fittings which are compatible with Swagelok®, Parker A-Lok, Gyrolok, Bilok, and Tylok fittings. For Yor-Lok fittings, see page 174. Valves have a brass body, PTFE seats, and slightly restricted flow (standard port), unless noted.

Styles A&C have threads and a hex nut below the handle for mounting through an instrument panel. *Style A* have a nickel-plated brass ball, a fluoroelastomer seal, and a Buna-N seal. *Style C* have a Type 316 stainless steel ball, a PTFE seal, and PTFE packing.

Style B has a nickel-plated brass ball and fluoroelastomer seal.

Brass Ball Valves with Compression Tube Fittings

- Max. Pressure for Water, Oil, and Inert Gas: 150 psi @ 100° F
- Max. Pressure for Steam: Not rated
- Temp. Range: 40° to 180° F
- Vacuum Rating: Not rated

Connection to copper tubing is easy with the compression-end fittings on these valves. Suitable for use with Type L copper tubing on page 154. Body and ball are brass. Seats, seal, and packing are PTFE. All have slightly restricted flow (standard port). NSF 61 certified for use with drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012.

Tube Size ♦	Actual Tube OD	End-to-End Lg.		Each
1/2″	5/8″	2 13/16″	4067T11	$8.87
3/4″	7/8″	3 5/16″	4067T12	13.30
1″	1 1/8″	3 1/2″	4067T13	18.13

♦ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

Brass Ball Valves with Push-to-Connect Fittings

- Max. Pressure for Water: 200 psi @ 180° F
- Max. Pressure for Steam: Not rated
- Temp. Range: –40° to +180° F
- Vacuum Rating: Not rated

Forget your solder, clamp, and wrench—valves have push-to-connect fittings that make a tight seal around copper, CPVC, and PEX tubing. Body is brass, ball is chrome-plated brass, and seats and seal are PTFE. All have unrestricted flow (full port). This product is ANSI certified for use with drinking (potable) water in all states as of January 1, 2011.

Tube Size ♦	Actual Tube OD	End-to-End Lg.		Each
1/2″	5/8″	3 13/16″	2615K2	$30.68
3/4″	7/8″	4 9/16″	2615K4	39.30

♦ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

Single-Flanged Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 100° F
- Max. Pressure for Steam: Not rated
- Temp. Range: 32° to 350° F
- Vacuum Rating: Not rated

Made to connect to industry-standard two-bolt flanged circulator pumps, these valves fit pumps from Bell and Gossett, Taco, Grundfos, and Armstrong. A single-piece valve body simplifies pump isolation and reduces the chance of leaks. Pipe connection is NPT female. Body is brass, ball is chrome-plated brass, and seats and seal are PTFE. Valves have unrestricted flow (full port). Mounting fasteners included.

Pipe Size	End-to-End Lg.	Mounting Hole Size	Mounting Hole Ctr.-to-Ctr.		Each
1/2″	2 1/4″	1/2″	3 3/16″	2693K21	$23.75

Brass Ball Valves with Gauge Port

- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 100° F
- Max. Pressure for Steam: Not rated
- Temp. Range: –50° to +400° F
- Vacuum Rating: 29.9″ Hg

With a 1/4″ NPT female side port, these valves are ideal for attaching a pressure gauge. Side port also allows access to drain or divert fluids and comes with a plug. Connections are NPT female. Body is brass, ball is chrome-plated brass, seats are PTFE, and seal is fluoroelastomer. Valves have unrestricted flow (full port). UL and C-UL listed and CSA and CSA-US certified.

Pipe Size	End-to-End Lg.		Each
1/2″	2 9/16″	4085T21	$14.42
3/4″	2 3/4″	4085T22	19.71

1 1/4″	3 7/8″	4085T24	55.59
1 1/2″	4 1/4″	4085T25	68.62
2″	5″	4085T26	111.73

For information about ball valves, see page 426. For information about pipe size, see pages 2-3.

Compact High-Pressure Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 70°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –40° to +300°F
- Vacuum Rating: 29″ Hg

Great for use in tight spaces, these compact valves are suitable for high-pressure applications. Connections are NPT. Body is brass, ball is nickel-plated brass, seats are PTFE, and seal is fluoroelastomer. Valves have unrestricted flow (full port).

Panel-Mount Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas:
  - Inline: 1/8″-1/4″: 1500 psi @ 70°F
    3/8″-1/2″: 1000 psi @ 70°F
  - Elbow: 1/8″-1/4″: 1500 psi @ 70°F
    3/8″-1/2″ Using Bottom Port Inlet: 1000 psi @ 70°F
    3/8″-1/2″ Using Side Port Inlet: 600 psi @ 70°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –40° to +300°F
- Vacuum Rating: 29″ Hg

Valves have threads and a hex nut below the handle for simple installation in your instrument panel. They're ideal for vacuum service. Connections are NPT. Body is brass and ball is nickel-plated brass. All have PTFE seats, a fluoroelastomer seal, and a Buna-N seal. Require a 9/16″ diameter panel cutout. *Valves with 1/8″ and 1/4″ pipe size* have unrestricted flow (full port); *valves with 3/8″ and 1/2″ pipe size* have slightly restricted flow (standard port).

Female×Female

Any-Direction Diverting 3-Port Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 400 psi @ 176°F
- Max. Pressure for Steam: 100 psi @ 338°F
- Temp. Range: –4° to +344°F
- Vacuum Rating: 29″ Hg

Change these valves to use any port as the inlet—handle is removable for repositioning, allowing you to alter the flow to fit your application. Direct flow between the center port and either side port or shut off flow completely.

Different from industry-standard diverting brass ball valves, these have a flexible seat design and double-seal construction, which provide consistent leak-free operation and easier handle rotation under high pressure for a long service life. Connections are NPT female. Body is brass (brass meets ASTM-B283) and ball is chrome-plated brass. Seats are PTFE cushioned by a fluoroelastomer O-ring and seals are fluoroelastomer. Valves have slightly restricted flow (standard port).

Pipe Size	End-to-End Lg.		Each	Pipe Size	End-to-End Lg.		Each

Wye-Shape 3-Port Brass Ball Valves

With NPT Connections:

- Max. Pressure for Water, Oil, and Inert Gas:
  Without Exhaust: 600 psi @ 200°F
  With Exhaust: 250 psi @ 200°F
- Max. Pressure for Steam:
  Without Exhaust: 150 psi @ 358°F
  With Exhaust: Not rated
- Temp. Range: –40° to +365°F
- Vacuum Rating: 29″ Hg

With Fire Hose Connections:

- Max. Pressure for Water: 300 psi @ 150°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –20° to +150°F
- Vacuum Rating: Not rated

Control flow in two directions from a single source—valves have two balls for independent control and shut-off of each outlet. All have one female inlet, two male outlets, and a brass body.

Valves with NPT Connections— Inlet is 1″ female; outlets are 3/4″ male; length from inlet port to outlet ports is 3 1/4″. Balls are chrome-plated brass, seats and seals are PTFE, and packing is fluoroelastomer. Valves have slightly restricted flow (standard port). *Valve with safety exhaust* is ideal for use with compressed air; when closed, valve vents air pressure through the exhaust port so you can disconnect air tools safely.

Valves with Fire Hose Connections— Exclusively for use with water. Inlet is 2 1/2″ female; outlets are 1 1/2″ male; length from inlet port to outlet ports is 5 5/8″. Balls are acetal, seats are UHMW polyethylene, and seals are Buna-N. Valves have restricted flow (reduced port). For information about fire hose connections, see page 252.

		Each
NPT without Safety Exhaust	4017T14	$34.10
NPT with Safety Exhaust	4017T16	41.98
Fire Hose NPSH (National Pipe Straight Hose)	6504T4	279.24
Fire Hose NH (National Hose)	6504T5	279.24

For information about ball valves, see page 426. For information about pipe size, see pages 2-3.

Chrome-Plated Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 212°F
- Max. Pressure for Steam: 150 psi @ 366°F
- Temp. Range: –40° to +366°F
- Vacuum Rating: 29″ Hg

For better corrosion resistance than standard brass ball valves, these have a chrome-plated brass body and ball. Connections are NPT. Seats and packing are PTFE. All have unrestricted flow (full port).

Lockable Lever— Lock your handle in position using a padlock (not included) with shackle diameter of 9/32″.

Female x Female

Nickel-Plated Brass Ball Valves

NPT:

- Max. Pressure for Water, Oil, and Inert Gas:
  Lever: 1/4″-3/4″: 600 psi @ 235°F
  1″-2″: 500 psi @ 279°F
  3″: 400 psi @ 320°F
  T-Handle: 600 psi @ 100°F
- Max. Pressure for Steam: 150 psi @ 366°F
- Temp. Range: –40° to +366°F
- Vacuum Rating: 29.89″ Hg

Solder End (Unthreaded) When Used with 95/5 Solder:

- Max. Pressure for Water, Oil, and Inert Gas: 1/2″-1″: 500 psi @ 100°F
  1 1/2″: 400 psi @ 100°F
- Max. Pressure for Steam: 15 psi @ 250°F
- Temp. Range: 0° to 250° F
- Vacuum Rating: 29.89″ Hg

A nickel-plated brass body gives these valves greater corrosion resistance than any other brass valve. Seats are PTFE and seals are fluoroelastomer. Valves have unrestricted flow (full port). All are UL listed and FM approved, except 4465K39. Connections are female. ***NPT valves*** are CSA and CSA-US certified.

Lever valves have a Type 316 stainless steel ball and PTFE packing. ***T-Handle valves*** are snag-resistant for use in tight spaces; handle does not turn when bumped. Ball is chrome-plated brass.

Miniature Chrome-Plated Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: Lever and T-Handle: 200 psi @ 100°F
  Wedge Handle and Screwdriver Style: 450 psi @ 100°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –50° to +200°F
- Vacuum Rating: 29.9″ Hg

With a chrome-plated brass body and ball, these miniature valves are not only ideal for small spaces, but they also have greater corrosion resistance than standard brass valves. Seats are PTFE and seal is fluoroelastomer. All have slightly restricted flow (standard port). ***BSPP (British Standard Pipe Parallel) valves*** meet ISO 228.

Wedge handle and ***screwdriver style valves*** are UL recognized to standard 207 for use with refrigeration systems. *Screwdriver style* have a slotted screw to open and close the valve. ***NSF-certified wedge handle valves*** are NSF 61 certified for use with drinking (potable) water in all states except California, Maryland, and Vermont, as of January 1, 2012.

Nickel-Plated Brass & Bronze Ball Valves

For information about ball valves, see page 426. For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″

Bronze Ball Valves with Check Valve

- Max. Pressure for Water, Oil, and Inert Gas: 235 psi @ 160°F
- Max. Pressure for Steam: Not rated
- Temp. Range: 33° to 160°F
- Vacuum Rating: Not rated

Valves have a spring-loaded disk inside the ball to prevent flow reversal in your application. Connections are NPT female. Body is bronze and ball is chrome-plated brass. Seats are carbon/glass-filled PTFE, and seal and packing are PTFE. The check valve is acetal and SBR rubber and has a Type 316 stainless steel spring. It has an initial opening (cracking) pressure of less than 0.25 psi. Valves have slightly restricted flow (standard port).

Extended-Life Bronze Ball Valves

NPT and SAE:

- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 100°F
- Max. Pressure for Steam: 150 psi @ 365°F
- Temp. Range: –20° to +450°F
- Vacuum Rating: 29″ Hg

Solder-End (Unthreaded) When Used with 95/5 Solder:

- Max. Pressure for Water, Oil, and Inert Gas: 3/8″-1″: 500 psi @ 100°F; 1 1/4″-2″: 400 psi @ 100°F
- Max. Pressure for Steam: 15 psi @ 250°F
- Temp. Range: 0° to 250°F
- Vacuum Rating: 29″ Hg

Spend less time on valve maintenance—bronze is harder, stronger, and more corrosion resistant than brass, giving these valves a longer service life. Body is bronze and ball is chrome-plated brass. Seats are glass-filled PTFE, seals are PTFE, and packing is glass-filled PTFE. Valves with unrestricted flow are full port; valves with slightly restricted flow are standard port.

SAE valves have an O-ring that forms a tight seal for a leak-resistant connection. ***Union NPT valves*** are quick and easy to install. Handle can be locked in position using a padlock (not included) with shackle diameter of 1/4″.

Spring-close lever valves close automatically when the lever is released to ensure your valve is open only when an operator is present.

Diverting 3-Port Bronze Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 400 psi @ 100°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –20° to +450°F
- Vacuum Rating: Not rated

Combine the strength of bronze with diverting capabilities—use valves to direct flow from the center inlet to one of the side outlets. Valves have no shut-off position. Connections are NPT female. Body is bronze, ball is chrome-plated brass, seats are glass-filled PTFE, and packing is carbon/graphite-filled PTFE. Valves have two mounting holes for attaching an actuator. *Valves with 1/4″ to 1/2″ pipe size* have unrestricted flow (full port); *valves with 3/4″ to 2″ pipe size* have slightly restricted flow (standard port). *Valves with 1 1/2″ and 2″ pipe size* have a PTFE seal.

Pipe Size	End-to-End Lg.	Mounting Hole Size		Each

High-Pressure Steam Bronze Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 100°F
- Max. Pressure for Steam: 250 psi @ 406°F
- Temp. Range: –20° to +500°F
- Vacuum Rating: 29″ Hg

These valves withstand steam pressure up to 250 psi. Connections are NPT female. Body is bronze, ball is Type 316 stainless steel, and seats and packing are carbon/graphite-filled PTFE. *Valves with 1/4″ to 1/2″ pipe size* have unrestricted flow (full port); *valves with 3/4″ to 2″ pipe size* have slightly restricted flow (standard port). *Valves with 1 1/4″ to 2″ pipe size* have a PTFE seal.

Safety Air-Exhaust Bronze Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 125 psi @ 200°F
- Max. Pressure for Steam: Not rated
- Temp. Range: 50° to 200°F
- Vacuum Rating: Not rated

Meet OSHA requirements for safety and control in your compressed air system. All valves have a 1/4″ NPT female exhaust port; when closed, valves vent air pressure so you can disconnect air tools safely.

Valves have NPT female connections. Body is bronze and ball is chrome-plated brass. Seats are glass-filled PTFE, seals are PTFE, and packing is glass-filled PTFE. Valves have unrestricted flow (full port). The handle can be locked in the shut-off position using a padlock (not included) with a shackle diameter of 1/4″. *Valves with 3/4″ to 2 1/2″ pipe size* have two mounting holes for attaching an actuator.

Pipe Size	End-to-End Lg.	Mounting Hole Size		Each
1/4″	2 1/16″	—	4875K21	$37.74
3/8″	2 1/16″	—	4875K22	38.08
1/2″	2 3/16″	—	4875K23	38.43
3/4″	3 1/8″	10-24	4875K24	56.80

2″	5 3/8″	5/16″-24	4875K28	198.68
2 1/2″	6 1/2″	1/4″-20	4875K29	401.74

Bronze Ball Valves with Garden Hose Thread Outlet

- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 300°F
- Max. Pressure for Steam: 150 psi @ 450°F
- Temp. Range: 33° to 350°F
- Vacuum Rating: Not rated

Increase utility in your pipeline by adding an easy-to-use connection for garden hose. Valves include a screw-on cap with retaining chain to protect from dust and debris when your hose is disconnected. Inlet is NPT female; outlet is 3/4″ garden hose thread (GHT) male. Body is bronze, ball is a chrome-plated brass, seats are PTFE, and packing is glass-filled PTFE. Valves have slightly restricted flow (standard port).

Pipe Size	End-to-End Lg.		Each
1/2″	2 15/16″	47315K41	$22.65
3/4″	3 1/2″	47315K42	32.40

Low-Profile Type 316 Stainless Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 200°F
- Max. Pressure for Steam: 150 psi @ 358°F
- Temp. Range: –36° to +368°F
- Vacuum Rating: 29.9″ Hg

Perfect for high-pressure applications with limited space. Connections are NPT. Body and ball are Type 316 stainless steel; seats and seal are PTFE. The handle can be locked in position using a padlock (not included) with a shackle diameter of 9/32″. *Valves with 1/4″ pipe size* have unrestricted flow (full port); *valves with 3/8″ and 1/2″ pipe size* have restricted flow (reduced port).

Pipe Size	End-to-End Lg.	*Female×Female*	Each	*Female×Male*	Each	Pipe Size	End-to-End Lg.	*Male×Male*	Each

Type 316 Stainless Steel Ball Valves

With Unrestricted Flow:
- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 200°F
- Max. Pressure for Steam: 150 psi @ 366°F
- Temp. Range: 0° to 450°F
- Vacuum Rating: Not rated

With Restricted Flow:
- Max. Pressure for Water, Oil, and Inert Gas: 800 psi @ 100°F
- Max. Pressure for Steam: 50 psi @ 298°F
- Temp. Range: 0° to 450°F
- Vacuum Rating: 28.95″ Hg

Ideal for your harsh environment, these valves have a Type 316 stainless steel body and ball for exceptional corrosion resistance. Connections are NPT female. The handle can be locked in position using a padlock (not included) with a shackle diameter of 1/4″.

Valves with unrestricted flow are full port. Seats are glass-filled PTFE and seals are PTFE. ***Valves with restricted flow*** are reduced port. Seats and packing are PTFE.

Oval handle valves are snag resistant; handle does not turn when bumped.

Super-Miniature Type 303 Stainless Steel Ball Valves

- Max. Pressure: 250 psi @ 150°F
- Max. Pressure for Steam: Not rated
- Temp. Range: See table
- Vacuum Rating: 25″ Hg

Great for low-flow applications and extremely tight spaces, these tiny valves have an end-to-end length of 11/16″. They have 10-32 straight female threads for connection to miniature fittings and tubing. Body is Type 303 stainless steel and ball is Type 316 stainless steel. Valves have restricted flow (reduced port).

Seat and Seal Material	Temp. Range		Each
Water-Resistant EPDM	–60° to +300°F	4059K36	$74.75
Oil-Resistant Buna-N	–60° to +250°F	4059K32	72.50
Chemical-Resistant Fluoroelastomer	0° to +400°F	4059K34	76.12

Type 316 Stainless Steel Ball Valves with Yor-Lok Fittings

Lockable Lever:
- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 100°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –30° to +400°F
- Vacuum Rating: Not rated

T-Handle:
- Max. Pressure for Water, Oil, and Inert Gas: 6000 psi @ 125°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –30° to +280°F
- Vacuum Rating: 29″ Hg

High corrosion resistance is combined with the leak-free compression seal of a Yor-Lok fitting. Valves connect with tubing; connections are Yor-Lok double-ferrule compression tube fittings, which are compatible with Swagelok®, Parker A-Lok, Bilok, and Tylok fittings. For Yor-Lok fittings, see page 174. Body and ball are Type 316 stainless steel. All valves have slightly restricted flow (standard port) except 45775K58, which has restricted flow (reduced port).

Lockable Lever— Seats, seal, and packing are PTFE. The handle can be locked in position using a padlock (not included) with a shackle diameter of 5/16″.

T-Handle— Rated for extremely high pressure, these valves are ideal for use in instrumentation. Seats are Kel-F, and seal and packing are PTFE. Valves mount through a panel using the threads and hex nut below the handle. *Valves for 1/16″ to 3/8″ tube OD* require a panel cutout of 3/4″ dia.; *1/2″ tube OD valve* requires a panel cutout of 13/16″ dia.

Lockable Lever

For Tube OD	End-to-End Lg.		Each

1/2″	4 1/16″	45775K59	236.89

Compact Type 316 Stainless Steel Ball Valves with Yor-Lok Fittings

- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 300°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –65° to +300°F
- Vacuum Rating: Not rated

With a compact body that's ideal for confined spaces, these valves are a suitable replacement for Swagelok® 40 series valves. They provide a leak-tight compression seal for tubing. Connections are Yor-Lok double-ferrule compression tube fittings, which are compatible with Swagelok®, Parker A-Lok, Bilok, and Tylok fittings. For Yor-Lok fittings, see page 174. Body and ball are Type 316 stainless steel. Seats, seal, and packing are PFA (perfluoroalkoxy). Valves have restricted flow (reduced port). All mount through an instrument panel using the threads and hex nut below the handle.

For Tube OD	End-to-End Lg.	Panel Cutout, dia.		Each
1/16″	1 11/16″	19/32″	2840K21	$97.18

Type 316 Stainless Steel Ball Valves with British Standard Threads

- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 100°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –30° to +400°F
- Vacuum Rating: Not rated

Get superior corrosion resistance for your metric pipe—valve connections are BSPP (British Standard Pipe Parallel) for use with BSPP threads. Body and ball are Type 316 stainless steel, seats and seal are PTFE, and packing is glass-filled PTFE. Valves have slightly restricted flow (standard port). Valves have a handle that can be locked in position using a padlock (not included) with a shackle diameter of 5/16″, unless noted.

Pipe Size	End-to-End Lg.	Female × Female	Each	Female × Male	Each
1/4″	2″	4932K22	$42.01	4932K52	$58.05
3/8″	2 3/8″	4932K23	52.89	—	—
1/2″	3″	4932K24	51.91	4932K53★	61.31

★ Handle is not lockable.

For information about ball valves, see page 426. For information about pipe size, see pages 2-3.

Cleaned and Bagged Easy-Maintenance Type 316 Stainless Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1440 psi @ 100° F
- Max. Pressure for Steam: 250 psi @ 406° F
- Temp. Range: –50° to +400° F
- Vacuum Rating: 29″ Hg

Ideal for oxygen service, these valves come cleaned and bagged. The three-piece bolted-body design provides quick, easy access to replace seats, seal, packing, or ball. Valves are also suitable for highly corrosive applications; all comply with NACE MR0175 for crack resistance in environments containing hydrogen sulfide.

Body and ball are Type 316 stainless steel. Seats, seal, and packing are PTFE. Valves have unrestricted flow (full port). The handle can be locked in position using a padlock (not included) with a shackle diameter of 5/16″.

Socket-weld valves are female unthreaded; they are for welded connections with unthreaded pipe (male). ***Butt-weld valves*** are unthreaded; they are for welded connections with standard wall (Schedule 40) pipe.

Easy-Maintenance Type 316 Stainless Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 220° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: 0° to 450° F
- Vacuum Rating: Not rated

Make valve maintenance quick and simple. A three-piece bolted-body design allows access to replace the seats, seal, packing, or ball without removing your valve from the pipeline. Body and ball are Type 316 stainless steel for superior corrosion resistance in harsh conditions. Valves have unrestricted flow (full port). The handle can be locked in position using a padlock (not included) with a shackle diameter of 1/4″. *Valves with 1/4″ to 2″ pipe size* have PTFE seats, seal, and packing. *Valves with 2 1/4″ to 4″ pipe size* have modified PTFE seats and seal and carbon/graphite-filled PTFE packing.

Socket-weld valves are female unthreaded; they are for welded connections with unthreaded pipe (male).

Valves with Type 316 stainless steel connections are ideal for highly corrosive environments.

Sanitary Easy-Maintenance Type 316 Stainless Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas:
  1/2″-2″: 1000 psi @ 100° F
  2 1/2″-3″: 800 psi @ 100° F
- Max. Pressure for Steam: Not rated
- Temp. Range: 0° to 300° F
- Vacuum Rating: Not rated

Meet 3-A sanitary standard health and safety requirements for food, beverage, dairy, pharmaceutical, and biotechnology applications. Valves have a three-piece bolted-body design for easy access to replace seats, seal, packing, or ball without removing your valve from the pipeline. Body and ball are Type 316 stainless steel. Seats, seal, and packing are PTFE. Valves have unrestricted flow (full port). The handle can be locked in position using a padlock (not included). *Valves for 1/2″ to 1″ tube OD* accept a padlock with a shackle diameter of 3/16″; *valves for 1 1/2″ to 3″ tube OD* accept a padlock with a shackle diameter of 7/32″.

Quick-clamp valves connect with quick-clamp fittings on pages 208-210. ***Butt-weld valves*** are unthreaded; they are for welded connections with tubing.

Diverting 3-Port Type 316 Stainless Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 800 psi @ 100° F
- Max. Pressure for Steam: Not rated
- Temp. Range: –50° to +450° F
- Vacuum Rating: Not rated

Flow Options

Direct flow from the center inlet to one of the side outlets at full capacity, or to both side outlets simultaneously at a reduced capacity. Valves have no shut-off position.

Valves have NPT female connections. Body and ball are Type 316 stainless steel. Seats are glass-filled PTFE, seal is PTFE, and packing is carbon/graphite-filled PTFE. Valves have two mounting holes for attaching an actuator. *Valves with 1/4″ to 1/2″ pipe sizes* have unrestricted flow (full port); *valves with 3/4″ to 2″ pipe sizes* have slightly restricted flow (standard port).

Pipe Size	End-to-End Lg.	Mounting Hole Size		Each
1/4″	2 5/16″	10-24	4467K41	$114.88

2″	4″	1/4″-20	4467K47	486.01

Diverting 3-Port Type 316 Stainless Steel Ball Valves with Yor-Lok Fittings

- Max. Pressure for Water, Oil, and Inert Gas: 6000 psi @ 125° F
- Max. Pressure for Steam: Not rated
- Temp. Range: –30° to +280° F
- Vacuum Rating: 29″ Hg

Flow Options

The corrosion resistance of Type 316 stainless steel is combined with the leak-free seal of a Yor-Lok double-ferrule compression tube fitting. Use valves to direct flow from the bottom inlet to one of the side outlets or shut off flow completely. For Yor-Lok fittings, see page 174. Connections are also compatible with Swagelok®, Parker A-Lok, Bilok, and Tylok fittings.

Valves have a Type 316 stainless steel body and ball. Seats are Kel-F and seal and packing are PTFE. Valves mount through an instrument panel using the threads and hex nut below the handle. *Valves for 1/16″ to 3/8″ tube OD* have slightly restricted flow (standard port); *valve for 1/2″ tube OD* has restricted flow (reduced port).

For Tube OD	End-to-End Lg.	Panel Cutout, dia.		Each
1/16″	2 3/4″	49/64″	45165K39	$118.57
1/8″	3 1/8″	49/64″	45165K41	119.21
1/4″	3 5/16″	49/64″	45165K42	151.86

Stainless Steel Ball Valves with High-Vacuum Tube Fittings

- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 150° F
- Max. Pressure for Steam: 40 psi @ 267° F
- Temp. Range: 0° to 300° F
- Vacuum Rating: 10^{-5} torr (unless noted)

Create a strong seal for high-vacuum applications. These valves have Type 304 stainless steel high-vacuum tube fitting connections, also known as NW fittings, that are compatible with High-Vacuum Tube Fittings on pages 214-215. They meet 3-A sanitary standard requirements. Body and ball are Type 316 stainless steel. Seats, seal, and packing are PTFE. Valves have unrestricted flow (full port). The handle can be locked in position using a padlock (not included). *Valves for 1/2″ to 1″ tube OD* accept a padlock with a shackle diameter of 1/4″; *valves for 1 1/2″ and 2″ tube OD* accept a padlock with a shackle diameter of 5/16″.

For Tube OD	Flange OD	Trade No.	End-to-End Lg.		Each
1/2″	1 3/16″	16	4 5/16″	4123K41	$277.73
3/4″	1 3/16″	16	4 11/16″	4123K43	293.12

2″	2 15/16″	50	6 3/8″	4123K49★	529.08

★ Vacuum rating is 10^{-4} torr.

Low-Profile Type 316 Stainless Steel and Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 500 psi @ 200° F
- Max. Pressure for Steam: Not rated
- Temp. Range: 40° to 200° F
- Vacuum Rating: Not rated

Use these valves where space is at a premium. Seats, seal, and packing are PTFE.

Type 316 stainless steel valves provide excellent corrosion resistance. Body and ball are Type 316 stainless steel. All have slightly restricted flow (standard port).

Nickel-plated steel valves provide good corrosion resistance. Body and ball are nickel-plated steel. All have unrestricted flow (full port).

High-Pressure Type 316 Stainless Steel and Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas:
  Lockable Lever: 1/4"-1": 1800 psi @ 0°F
  1 1/4"-2": 1500 psi @ 75°F
  2 1/2"-3": 800 psi @ 250°F
  Spring-Close Lever: 1/4"-1": 2000 psi @ 50°F
  1 1/4"-2": 1500 psi @ 100°F
- Max. Pressure for Steam: 150 psi @ 365°F
- Temp. Range: Lockable Lever: –20° to +450°F
  Spring-Close Lever: –20° to +500°F
- Vacuum Rating: 29" Hg

A great choice for on/off control in high-pressure applications. All valves have NPT female connections. All have slightly restricted flow (standard port).

Lockable-lever valves have a handle that can be locked in position using a padlock (not included). Seats and packing are glass-filled PTFE and seal is PTFE. Valves have mounting holes for attaching an actuator. *Type 316 stainless steel valves* accept a padlock with a shackle diameter of 1/4"; *steel valves* accept a padlock with a shackle diameter of 5/16".

Spring-close lever valves close automatically when the lever is released to ensure your valve is open only when an operator is present. Seats and packing are carbon/graphite-filled PTFE and seal is PTFE.

Type 316 stainless steel valves have excellent corrosion resistance. Body and ball are Type 316 stainless steel. ***Steel valves*** have a steel body and a chrome-plated steel ball.

Ultra-High-Pressure Type 316 Stainless Steel and Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas:
  1/4"-1": 4500 psi @ 120°F
  1 1/4"-2": 3000 psi @ 150°F
- Max. Pressure for Steam: Not rated
- Temp. Range:
  Stainless Steel: –40° to +230°F
  Steel: –20° to +230°F
- Vacuum Rating: Not rated

Ideal for ultra-high-pressure applications, a flexible seat design provides consistent leak-free operation for a long service life. Valve performance exceeds ANSI/FCI 70-2 Class VI standards for leakage. Connections are NPT female. Ball is Type 316 stainless steel, seats are acetal, and seals and packing are PTFE. The handle can be locked in position using a padlock (not included) with a shackle diameter of 9/32". Valves have three mounting holes for mounting to a panel. *Valves with 1/4" to 3/4" pipe size* have unrestricted flow (full port); *valves with 1" to 2" pipe size* have slightly restricted flow (standard port).

Type 316 stainless steel valves have a Type 316 stainless steel body for excellent corrosion resistance. ***Steel valves*** have a steel body.

Easy-Maintenance High-Pressure-Steam Type 316 Stainless Steel and Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1440 psi @ 200°F
- Max. Pressure for Steam: See table
- Temp. Range: 0° to 550°F
- Vacuum Rating: Not rated

Maintenance in high-pressure-steam applications is quick and simple. A three-piece bolted-body design allows access to replace the seats, seal, or ball without unthreading the valve connections from your pipeline. Body has enclosed fasteners to minimize dust buildup during use for a long service life.

Valves have NPT female connections. Ball is Type 316 stainless steel, seats are carbon/graphite-filled TFE, seal is flexible graphite, and packing is carbon/graphite-filled TFE. All have unrestricted flow (full port). The handle can be locked in position using a padlock (not included) with a shackle diameter of 1/4". *Valves with 1/4" to 1 1/2" pipe size* have a lever handle; *valves with 2" pipe size* have a pipe-style lever handle.

Type 316 stainless steel valves have a Type 316 stainless steel body for excellent corrosion resistance. ***Steel valves*** have a steel body.

Pipe Size	Max. Pressure for Steam	End-to-End Lg.	Type 316 Stainless Steel	Each	Steel	Each

Flanged Type 316 Stainless Steel and Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 275 psi @ 100°F
- Max. Pressure for Steam: 100 psi @ 366°F
- Temp. Range: 0° to 500°F
- Vacuum Rating: 28" Hg

Simply bolt these valves with unthreaded ANSI Class 150 flange connections to ANSI flanges of the same pipe size for ease of installation and maintenance. Ball is Type 316 stainless steel, seats are modified PTFE, seals are PTFE, and packing is glass-filled PTFE. Valves have unrestricted flow (full port). The handle can be locked in position using a padlock (not included). Valves have four mounting holes for attaching an actuator. All meet ASME B16.5 and ASME B16.10. *Valves with 1/2" to 2" pipe size* have a lever handle that accepts a padlock with a shackle diameter of 9/32"; *valves with 2 1/2" to 4" pipe size* have a pipe-style lever handle that accepts a padlock with a shackle diameter of 5/16".

Type 316 stainless steel valves have a Type 316 stainless steel body for excellent corrosion resistance. ***Steel valves*** have a steel body.

Fire-Tested Type 316 Stainless Steel and Steel Ball Valves

High-Pressure Steam:
- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 200°F
- Max. Pressure for Steam: 250 psi @ 400°F
- Temp. Range: –20° to +500°F
- Vacuum Rating: Not rated

High Pressure:
- Max. Pressure for Water, Oil, and Inert Gas: 2000 psi @ 250°F
- Max. Pressure for Steam: 150 psi @ 366°F
- Temp. Range: –20° to +450°F
- Vacuum Rating: 26″ Hg

Ultra-High Pressure:
- Max. Pressure for Water, Oil, and Inert Gas: 3600 psi @ 100°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –40° to +185°F
- Vacuum Rating: 29.4″ Hg

Extreme Pressure:
- Max. Pressure for Water, Oil, and Inert Gas: 6000 psi @ 100°F
- Max. Pressure for Steam: 250 psi @ 406°F
- Temp. Range: –70° to +550°F
- Vacuum Rating: 29.4″ Hg

Choose "safety first" for your applications that handle flammable fluids. Valves are fire-tested to American Petroleum Institute (API) standard 607, Edition 4 and have a one-piece body for secure fluid isolation. Connections are NPT female. Ball is Type 316 stainless steel. The handle can be locked in position using a padlock (not included). *Style A* has restricted flow (reduced port). *Style B* has unrestricted flow (full port).

High-pressure steam valves have glass-filled PTFE seats and a graphite seal.

High-pressure valves have glass-filled PTFE seats and graphite packing.

Ultra-high-pressure and ***extreme-pressure valves*** are ideal for use in chemical, power, and petroleum-processing systems. They have a fluoroelastomer seal and graphite packing. All have three mounting holes for attaching an actuator; mounting hole size is 1/4″-20. Valves comply with NACE MR0175 for crack resistance in environments containing hydrogen sulfide. Meet API standard 608 and ANSI B16.34. *Ultra-high-pressure valves* have acetal seats; *extreme-pressure valves* have PEEK seats.

Type 316 stainless steel valves have a Type 316 stainless steel body for excellent corrosion resistance. ***Steel valves*** have a steel body.

Diverting 3-Port Hydraulic Steel Ball Valves

- Max. Pressure for Oil: See table
- Max. Pressure for Steam: Not rated
- Temp. Range: 14° to 176°F
- Vacuum Rating: Not rated

Flow Options

Rated for extremely high pressure, these valves are great for use with fluids in hydraulic systems. Direct flow between two ports or shut off flow completely. Connections are NPT female. Body is steel, ball is chrome-plated steel, seats are polyacetal, and seals are fluoroelastomer. Valves have restricted flow (reduced port).

Pipe Size	Max. psi @ 176°F	End-to-End Lg.		Each
1/4″	7250	3 15/16″	**46185K511**	$251.04
3/8″	7250	4 9/16″	**46185K512**	309.10
1/2″	5800	5 5/16″	**46185K513**	413.60
3/4″	4500	5 11/16″	**46185K514**	764.52

Easy-Maintenance Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1500 psi @ 100°F
- Max. Pressure for Steam: 150 psi @ 365°F
- Temp. Range: –50° to +500°F
- Vacuum Rating: 29″ Hg

A three-piece bolted-body design provides quick, easy access to replace seats, seal, packing, or ball without unthreading the valve connections from your pipeline. Connections are NPT female. Body is steel and ball is Type 316 stainless steel. Seats are TFM and seal and packing are PTFE. Valves have unrestricted flow (full port). The handle can be locked in position using a padlock (not included) with a shackle diameter of 5/16″.

Pipe Size	End-to-End Lg.		Each
1/2″	2 13/16″	**9788K81**	$84.52
3/4″	3 11/16″	**9788K82**	99.74

2″	5 7/8″	**9788K86**	267.35

Sure-Fit Flanged Cast Iron Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 200 psi @ 150°F
- Max. Pressure for Steam: 125 psi @ 212°F
- Temp. Range: –20° to +353°F
- Vacuum Rating: Not rated

Swap out your flanged gate valve for actuation capabilities and quicker on/off control; flange dimensions match flanged gate valves of the same pipe size. Connections are unthreaded ANSI Class 125 flanges that bolt to ANSI flanges of the same pipe size for simple installation. Body and ball are cast iron and seats and seal are glass-filled PTFE. Valves have unrestricted flow (full port). The handle can be locked in position using a padlock (not included) with a shackle diameter of 1/4″. Valves have four mounting holes for attaching an actuator. Meet ANSI B16.5/B16.10 and MSS-SP-72.

For information about ball valves, see page 426. For information about pipe size, see pages 2-3.

Hydraulic Extreme-Pressure Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: See table
- Max. Pressure for Steam: Not rated
- Temp. Range: –20° to +212° F
- Vacuum Rating: Not rated

Ideal for use with extremely high-pressure hydraulic oil systems. Connections are female. Body is zinc-plated steel, ball is chrome-plated steel, seats are acetal filled with molybdenum disulfide, and seal is fluoroelastomer. Valves have unrestricted flow (full port).

Lockable-lever valves have a handle that can be locked in position using a padlock (not included) with a shackle diameter of 5/16″.

Compact Low-Pressure PVC Ball Valves

- Max. Pressure: 125 psi @ 140° F
- Temp. Range: 33° to 140° F
- Vacuum Rating: Not rated

Compact and lightweight, these valves are great for low-pressure applications in tight locations. Ideal for use with water, oil, and inert gas, valves have a PVC body and ball for good strength and corrosion resistance. Seats and seal are Buna-N. Color is gray. Valves are NSF 61 certified for use with drinking (potable) water. All have unrestricted flow (full port), except valves with a 3/4″ pipe size, which have slightly restricted flow (standard port).

NPT Female × Female

Aluminum Ball Valves with 37° Flared Tube Fittings

- Max. Pressure for Water, Oil, Leaded Gasoline, Diesel Fuel, and Methanol: 200 psi @ 72° F
- Max. Pressure for Steam: Not rated
- Temp. Range: –40° to +250° F
- Vacuum Rating: Not rated

Get a leak-free seal between your valve and tubing. Valve connections are AN fittings, which are manufactured to tighter tolerances than other 37° flared fittings. Use with 37° flared tubing and fittings; for tubing, see page 152, for fittings, see page 183.

Valves have an Alloy 6061-T6 aluminum body and ball, so they are lighter than similar valves made of other materials. Seats and seal are PTFE. All have unrestricted flow (full port).

For Tube OD	End-to-End Lg.	Mounting Hole Size		Each
3/8″	2 9/16″	9/16″-18	3710K31	$134.64

Ultra-Chemical-Resistant Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 720 psi @ 150° F
- Max. Pressure for Steam: 150 psi @ 359° F
- Temp. Range: –50° to +450° F
- Vacuum Rating: 29.9″ Hg

Perfect for use in aggressive environments, these valves have the highest chemical resistance of any we offer. Connections are NPT female. Seats and seals are glass-filled PTFE. All have restricted flow (reduced port).

Alloy 20 (stainless steel alloy) valves have an Alloy 20 body and ball for excellent resistance to acidic solutions.

Monel (nickel-copper alloy) valves have a Monel body and ball for superior resistance to acidic and alkaline solutions.

Pipe Size	End-to-End Lg.	Alloy 20	Each	Monel	Each
1/2″	2 3/16″	4072T15	$210.67	4072T55	$249.55

Low-Pressure PVC and CPVC Ball Valves

- Max. Pressure: 150 psi @ 73° F
- Temp. Range: PVC: 40° to 140° F; CPVC: 40° to 200° F
- Vacuum Rating: 26″ Hg

Ideal for low-pressure water lines, these valves are NSF 61 certified for use with drinking (potable) water and corrosion resistant. Use with Schedule 40 and 80 pipe and fittings. Connections are female. Seats are PTFE/HDPE (high-density polyethylene) and seal is EPDM. Valves have unrestricted flow (full port).

PVC valves have a PVC body and ball. **To Order:** Please specify color: white or dark gray.

CPVC valves handle higher temperatures than PVC; body and ball are CPVC. Color is dark gray.

PVC and CPVC Ball Valves

- Max. Pressure: 235 psi @ 73°F
- Temp. Range:
  PVC: 40° to 140°F
  CPVC: 40° to 200°F
- Vacuum Rating: 26″ Hg

Rated to withstand up to 235 psi, these valves are NSF 61 certified for use with drinking (potable) water and are corrosion resistant. Use with Schedule 40 and 80 pipe and fittings. Valves have female connections, PTFE seats, and unrestricted flow (full port).

PVC valves are ideal for use with water. Body and ball are PVC and seal is EPDM. Color is dark gray. ***CPVC valves*** handle higher temperatures than PVC and have a fluoroelastomer seal for good chemical resistance. Body and ball are CPVC. Color is light gray.

Easy-to-Install Single-Union PVC Ball Valves

- Max. Pressure: 1/2″-2″: 235 psi @ 100°F
  3″: 150 psi @ 100°F
- Temp. Range: 40° to 140°F
- Vacuum Rating: 26″ Hg

With a single union fitting for easy installation, these valves are NSF 61 certified for use with drinking (potable) water and are corrosion resistant. Use with Schedule 40 and 80 pipe and fittings. Connections are female. Valves have a PVC body and ball, PTFE seats, and unrestricted flow (full port). Color is dark gray.

Oil-resistant valves have a Buna-N seal. ***Chemical-resistant valves*** have a fluoroelastomer seal.

Easy-to-Install Double-Union PVC and CPVC Ball Valves

Extended Life

- Max. Pressure: 225 psi @ 70°F
- Temp. Range:
  PVC: 40° to 140°F
  CPVC: 40° to 180°F
- Vacuum Rating: 26″ Hg

Union fittings make these valves easy to install and allow for maintenance without detaching your pipe connections. Use with Schedule 40 and 80 pipe and fittings. Valves have female connections, PTFE seats, and unrestricted flow (full port). *NPT* and *socket weld (unthreaded) valves* include fittings for each connection. ***PVC valves*** have a dark gray PVC body and ball. ***CPVC valves*** have a light gray CPVC body and ball.

Water-resistant valves have an EPDM seal. ***Chemical-resistant valves*** have a fluoroelastomer seal.

Extended-life and ***lockable valves*** are NSF 61 certified for use with drinking (potable) water. *Extended-life* have thicker walls. *Lockable* have a handle that can be locked in position using a padlock (not included) with a shackle diameter of 1/4″.

For information about ball valves, see page 426. For information about pipe size, see pages 2-3.

PVC Ball Valves with Garden Hose Threads

- Max. Pressure: 125 psi @ 140°F
- Temp. Range: 33° to 140°F
- Vacuum Rating: Not rated

Connect garden hose threaded (GHT) fittings to your pipeline for use in water-based applications. Valves have a PVC body and ball and PTFE seats. Seals are Buna-N, Santoprene, and PTFE. Valves have unrestricted flow (full port). Color is gray.

Pipe Size	End-to-End Lg.	GHT Female × GHT Male	Each	GHT Female × NPT Male	Each	GHT Female × NPT Female	Each	NPT Female × GHT Male	Each

Miniature PVC and Nylon Ball Valves

- Max. Pressure: 125 psi @ 140°F
- Temp. Range: 33° to 140°F
- Vacuum Rating: Not rated

Great for low-pressure applications in confined spaces, these miniature valves are good for use with water and oil. All have Buna-N seats and seal, unless otherwise stated.

Low-Flow Valves—*PVC valves* have a corrosion-resistant PVC body and ball and slightly restricted flow (standard port). Color is gray. *Nylon valves* have a nylon body, a glass-filled polypropylene ball, and unrestricted flow (full port). Color is black.

High-Flow Valves—These have a slightly larger overall size for greater capacity than low-flow valves. Body and ball are PVC for good corrosion resistance. Valves have unrestricted flow (full port). Color is gray. *Valves with 3/4" pipe size* have PTFE seats and PTFE, Buna-N, and chemical-resistant Santoprene seals.

Miniature Diverting 3-Port PVC Ball Valves

- Max. Pressure: 125 psi @ 140°F
- Temp. Range: 33° to 140°F
- Vacuum Rating: Not rated

Get diverting capabilities in a miniature valve—direct flow from the bottom inlet to one of two side outlets or stop flow completely. Valves are great for use in low-pressure applications with water, oil, and inert gas. Body and ball are PVC and seats and seals are Buna-N. Valves have slightly restricted flow (standard port). Color is gray.

Diverting 3-Port PVC and CPVC Ball Valves

- Max. Pressure: 150 psi @ 70°F
- Temp. Range: PVC: 40° to 140°F
  CPVC: 40° to 190°F
- Vacuum Rating: 28″ Hg

Flow Options

Use these lightweight diverting valves to direct flow from the bottom inlet to one of the side outlets or stop flow completely. Valves have union fittings for maintenance without detaching your pipe connections. Use with Schedule 40 and 80 pipe and fittings. Valves have PTFE seats and unrestricted flow (full port).

PVC valves have a PVC body and ball. Color is dark gray. ***CPVC valves*** handle higher temperatures than PVC; body and ball are CPVC. Color is light gray.

Water-resistant valves have an EPDM seal. ***Chemical-resistant valves*** have a fluoroelastomer seal.

Valves with 1/2″ to 2″ pipe size come with NPT female and socket weld (unthreaded) female connections. For *valves with 3″ and 4″ pipe size*, choose NPT female or socket weld (unthreaded) female connections.

To Order: For valves with 3″ and 4″ pipe size, please specify NPT or socket weld (unthreaded).

Easy-Access Diverting 3-Port PVC Ball Valves

- Max. Pressure: 232 psi @ 73°F
- Temp. Range: 40° to 140°F
- Vacuum Rating: 29″ Hg

Flow Options

Great for tight locations, the handle on these valves is perpendicular to pipe connections for easy access. Use any port as the inlet—direct flow to one of two outlets or to both outlets simultaneously at a reduced capacity. Valves have no shut-off position. They have union fittings for maintenance without detaching your pipe connections; valves come with NPT female and socket-weld (unthreaded) female connections. Use with Schedule 40 and 80 pipe and fittings. Valves have a PVC body and ball, PTFE seats, and unrestricted flow (full port). Color is dark gray. NSF 61 certified for use with drinking (potable) water. ***Water-resistant valves*** have an EPDM seal. ***Chemical-resistant valves*** have a fluoroelastomer seal.

FDA Plastic Ball Valves

- Max. Pressure: 150 psi @ 70°F
- Temp. Range: With Unrestricted Flow: 35° to 200°F
  With Restricted Flow: 35° to 150°F
- Vacuum Rating: With Unrestricted Flow: Not rated
  With Restricted Flow: 29.9″ Hg

Meet health and safety standards for food-processing applications. Materials in these valves meet FDA requirements for use with food.

Valves with unrestricted flow are full port. They have a polypropylene body, a polysulfone ball, and an EPDM seal. Color is white.

Valves with restricted flow are reduced port. They have an acetal body and ball and a Buna-N seal. Color is light gray. Valves are NSF 61 certified for use with drinking (potable) water.

Flow-Indicating Easy-to-Install PVC Ball Valves

- Max. Pressure: 150 psi @ 68°F
- Temp. Range: 32° to 140°F
- Vacuum Rating: Not rated

An easy-to-read indicator points to the angle of the valve opening. Valves have union fittings that make them easy to install and allow for maintenance without detaching your pipe connections. Use with Schedule 40 and 80 pipe and fittings. Connections are female. Valves have 1/2″ pipe size and 4 1/2″ end-to-end length. Body and ball are PVC and seats are PTFE. Valves have restricted flow (reduced port). Color is dark gray. ***Water-resistant valves*** have an EPDM seal. ***Chemical-resistant valves*** have a fluoroelastomer seal.

Nylon Ball Valves with Push-to-Connect Tube Fittings

- Max. Pressure: 145 psi @ 175°F
- Temp. Range: –4° to +175°F
- Vacuum Rating: 28″ Hg

With push-to-connect fittings that make a tight seal around the outside of plastic and rubber tubing, these valves are ideal for use with water and compressed air. Body is nylon, ball is nickel-plated brass, seats are PTFE, and seal is EPDM. Valves have slightly restricted flow (standard port). Color is black.

Polypropylene Ball Valves

- Max. Pressure: 100 psi @ 150°F
- Temp. Range: 40° to 150°F
- Vacuum Rating: Not rated

Chemical resistant and lightweight, these valves are a great option for low-pressure general-purpose applications. They have an easy-access grease fitting for adding lubricants to the seals. Connections are NPT female. Body, ball, and seats are glass-filled polypropylene. Seals are fluoroelastomer. Valves have unrestricted flow (full port). Color is black.

1 1/4″	4 3/8″	**48015K24**	24.47

For information about ball valves, see page 426. For information about pipe size, see pages 2-3.

Easy-to-Install Double-Union Polypropylene Ball Valves

Lever and T-Handle:
- Max. Pressure: 125 psi @ 140° F
- Temp. Range: 32° to 140° F
- Vacuum Rating: Not rated

NSF-Certified T-Handle:
- Max. Pressure: 150 psi @ 73° F
- Temp. Range: 32° to 180° F
- Vacuum Rating: 29″ Hg

Don't spend more time than necessary—union fittings on these valves simplify installation. They also allow for maintenance without unthreading your pipe connections. Use with Schedule 40 and 80 pipe and fittings. Connections are NPT female. Valves have unrestricted flow (full port), unless otherwise stated.

Lever and ***T-handle valves*** have a glass-filled polypropylene body and ball and PTFE-filled polypropylene seats. Color is black. *Valves with 1″ and 2″ pipe size* have slightly restricted flow (standard port).

NSF-certified T-handle valves are NSF 61 certified for use with drinking (potable) water. Body and ball are polypropylene and seats are PTFE. Color is tan.

Water-resistant valves have an EPDM seal. ***Chemical-resistant valves*** have a fluoroelastomer seal.

Easy-to-Install Single-Union Polypropylene Ball Valves

- Max. Pressure: 100 psi @ 70° F
- Temp. Range: –20° to +150° F
- Vacuum Rating: Not rated

A single union fitting makes these valves easy to install and maintain. Use in water-based applications with Schedule 40 and 80 pipe and fittings. Connections are NPT female. Body is glass-filled polypropylene, ball is polypropylene, seats are PTFE, and seal is EPDM. Valves have unrestricted flow (full port). Color is black.

Diverting 3-Port Easy-Maintenance Polypropylene Ball Valves

- Max. Pressure: 100 psi @ 70° F
- Temp. Range: –20° to +150° F
- Vacuum Rating: Not rated

Flow Options for Valves with Bottom Inlet

Flow Options for Valves with Side Inlet

Choose the port configuration that suits your application—use these valves to direct flow from the inlet to one of two outlets. They have a three-piece bolted-body design that provides quick, easy access to replace seats, seal, or ball. Connections are NPT female. Valves have a fiberglass-filled polypropylene body and a fluoroelastomer seal for good chemical resistance. Ball is polypropylene and seats are PTFE. Valves have unrestricted flow (full port). Color is black.

Valves with bottom inlet can shut off flow completely. They have a T-handle, unless noted. ***Valves with side inlet*** have no shut-off position. They have a lever handle, unless noted.

Pipe Size	End-to-End Lg.	With Bottom Inlet	Each	With Side Inlet	Each

Easy-Maintenance Polypropylene Ball Valves

- Max. Pressure: 1/2″-2″: 150 psi @ 70° F; 3″: 100 psi @ 70° F; 4″: 75 psi @ 70° F
- Temp. Range: –20° to +150° F
- Vacuum Rating: Not rated

A three-piece bolted-body design provides quick, easy access to replace seats, seal, or ball without unthreading the valve connections from your pipeline. Valves have a fiberglass-filled polypropylene body and fluoroelastomer seal for good chemical resistance. Connections are NPT female. Ball is polypropylene and seats are PTFE. Color is black.

Valves with unrestricted flow are full port. ***Valves with slightly restricted flow*** are standard port and have a smaller overall size.

	With Unrestricted Flow			With Slightly Restricted Flow

Self-Cleaning Easy-Maintenance Polypropylene Ball Valves

- Max. Pressure: 125 psi @ 73° F
- Temp. Range: 15° to 180° F
- Vacuum Rating: 29″ Hg

Designed to stay clean by sweeping out particles, these valves have a unique two-piece body that slides apart for easy access to replace seals. Ideal for use with water, oil, and inert gas, valves have chemical-resistant fluoroelastomer seals. Connections are NPT female. Body and ball are polypropylene. Valves have unrestricted flow (full port). Color is black.

2-port valves can be used for on/off control.

3-port valves for diverting direct flow from the right inlet to the center or left outlet. Valves have no shut-off position.

3-port valves for mixing join flow from two inlets to one outlet; any port can be used as an inlet or outlet. Valves can also be used to direct flow between two ports, divide flow from one inlet to two outlets, or shut off flow completely.

	2-PORT			3-PORT

Flanged Plastic Ball Valves

- Max. Pressure: 250 psi @ 100° F
- Temp. Range: –50° to +215° F
- Vacuum Rating: 29.92″ Hg

Get the easy installation and maintenance of flanged connections with lightweight plastic construction. Simply bolt these valves with unthreaded ANSI Class 150 flange connections to ANSI flanges with the same pipe size. Great for use with water, oil, inert gas, and harsh chemicals such as hydrochloric acid; these valves have a glass-filled vinyl ester body and ball for excellent corrosion resistance. Seats, seal, and packing are PTFE. Valves have slightly restricted flow (standard port). The handle can be locked in position using a padlock (not included) with a shackle diameter of 5/16″. Valves meet ASME B16.5 and ASME B16.10.

About Actuated Ball Valves

Actuated ball valves provide remote on/off control for automated applications. *Note: Valve, End-to-End Lg.* is the port-to-port length of only the valve. *Overall Size* is the length and height of the entire unit including the valve and the actuator.

Air-driven valves open and close faster than motor-driven valves. They operate on compressed air and electricity; an electric solenoid turns the air supply on and off, which opens and closes the valve. Air-driven valves come in two styles. ***Air-to-open/air-to-close*** use air pressure to open and to close the valve. ***Air-to-open/spring close*** ensure your valve is open only when the air is on; they use compressed air to open and a spring to close the valve automatically when the air turns off.

Motor-driven valves operate on electricity alone and are great for use where compressed air is not accessible.

Valves with direct mount have the actuator mounted directly to the valve body, which minimizes movement during operation for reduced wear. They also have a more compact overall size than bracket mount. ***Valves with bracket mount*** have a bracket that secures the actuator to the valve body for easy disassembly, maintenance, and repair.

Air-Driven Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 100° F
- Max. Pressure for Steam: Not rated
- Valve Temp. Range: –50° to +400° F
- Vacuum Rating: 29.9″ Hg

Use compressed air to operate these valves remotely. Connections are NPT female. Body is brass, ball is Type 316 stainless steel, seats are graphite-filled PTFE, and seal is fluoroelastomer. Valves have unrestricted flow (full port). Can be used in horizontal and vertical pipeline.

The actuator is direct mount and has a visual indicator that shows if flow is on or off. Requires an air supply of 80 to 120 psi; inlet is 1/4″ NPT female. Housing is aluminum. Comes with a solenoid that operates on 120 VAC at 60 Hz. Has 12″ wire leads and a DIN electrical connection with a 1/2″ conduit port. Rated NEMA 4 for indoor/outdoor use and resistance to splashing liquids and dusty environments. Actuator/solenoid temp. range is 0° to 130° F.

Air-Driven Nickel-Plated Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 600 psi @ 250° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Valve Temp. Range: –20° to +400° F
- Vacuum Rating: 29.91″ Hg

A nickel-plated brass body gives these valves greater corrosion resistance than other actuated brass ball valves. Connections are NPT female. Ball is Type 316 stainless steel, seats are PTFE, and seal is fluoroelastomer. Valves have unrestricted flow (full port). Can be used in horizontal and vertical pipeline.

The actuator is direct mount and has a visual indicator that shows if flow is on or off. Requires an air supply of 40 to 120 psi; inlet is 1/4″ NPT female. Housing is aluminum. Comes with a solenoid that operates on 120 VAC at 50/60 Hz. Has screw terminals with a DIN electrical connection. Rated NEMA 4 for indoor/outdoor use and resistance to splashing liquids and dusty environments. Actuator/solenoid temp. range is –4° to +180° F.

Air-Driven Type 316 Stainless Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 720 psi @ 150° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Valve Temp. Range: –50° to +450° F
- Vacuum Rating: 29.9″ Hg

A Type 316 stainless steel body and ball give these air-driven valves exceptional corrosion resistance for use in remote on/off control of your applications. Connections are NPTF (Dryseal) female. Seats and seal are glass-filled PTFE. Valves have slightly restricted flow (standard port). Can be used in horizontal and vertical pipeline.

The actuator is direct mount and has a visual indicator that shows if flow is on or off. Requires an air supply of 50 to 125 psi; inlet is 1/8″ NPT female. Housing is aluminum. Comes with a solenoid that operates on 120 VAC at 50/60 Hz. Has screw terminals with a DIN electrical connection. Rated IP65 for resistance to splashing water. Actuator/solenoid temp. range is –20° to +140° F. **Also Available:** Solenoids that operate on 240 VAC, 24 VAC, and 24 VDC. Please ask for 47005K15 and specify 240 VAC, 24 VAC, or 24 VDC.

For information about ball valves, see page 426; for actuated ball valves, see page 444.

Diverting 3-Port Air-Driven Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 400 psi @ 176° F
- Max. Pressure for Steam: 100 psi @ 344° F
- Valve Temp. Range: –4° to +344° F
- Vacuum Rating: 29″ Hg

Flow Options

Combine flow-diverting capabilities with remote valve operation—these air-driven valves direct flow from the center inlet to one of the side outlets. Connections are NPT female. Body is brass, ball is chrome-plated brass, seats are PTFE, and seals are PTFE and fluoroelastomer. Valves have slightly restricted flow (standard port). Can be used in horizontal and vertical pipeline.

The actuator is direct mount. Requires an air supply of 20 to 120 psi; inlet is 1/4″ NPT female. Housing is aluminum. Comes with a solenoid that operates on 110 VAC at 60 Hz. Has 12″ wire leads and a DIN electrical connection with a 1/2″ conduit port. Rated NEMA 4X for indoor/outdoor use and resistance to splashing liquids, corrosive agents, and dusty environments. Actuator/solenoid temp. range is 0° to 130° F.

High-Pressure Air-Driven Type 316 Stainless Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 200° F
- Max. Pressure for Steam: 150 psi @ 365° F
- Valve Temp. Range: –20° to +450° F
- Vacuum Rating: 29.9″ Hg

A great choice for remote control in high-pressure applications. Valves have a Type 316 stainless steel body and ball for exceptional corrosion resistance. Connections are NPT female. Seats are glass-filled PTFE and seal and packing are PTFE. Valves have unrestricted flow (full port). Can be used in horizontal and vertical pipeline.

The actuator is direct mount and has a visual indicator that shows if flow is on or off. Requires an air supply of 40 to 118 psi; inlet is 1/4″ NPT female. Housing is aluminum. Comes with a solenoid that operates on 120 VAC at 50/60 Hz. Has screw terminals with a DIN electrical connection. Rated NEMA 4 for indoor/outdoor use and resistance to splashing liquids and dusty environments. Actuator/solenoid temp. range is 32° to 122° F.

High-Use Air-Driven Type 316 Stainless Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 500 psi @ 100° F
- Max. Pressure for Steam: Not rated
- Valve Temp. Range: –20° to +350° F
- Vacuum Rating: Not rated

Designed to withstand frequent on/off flow control, these air-driven valves provide excellent wear resistance for remote operation in high-use applications. Valves have a Type 316 stainless steel body and ball for exceptional corrosion resistance. Connections are NPTF (Dryseal) female. Seats are glass-filled PTFE and seal is fluoroelastomer. Valves have slightly restricted flow (standard port). Can be used in horizontal and vertical pipeline.

The actuator is direct mount and double-acting (air-to-open/air-to-close). Requires an air supply of 60 to 125 psi; inlet is 1/8″ NPT female. Housing is aluminum. Actuator temp. range is –20° to +140° F.

Required solenoid valves (sold separately) are necessary to operate air-driven ball valves. They operate at 50/60 Hz and have screw terminals with a DIN electrical connection. Rated IP65 for resistance to splashing water. Solenoid temp. range is –20° to +140° F.

Ultra-High-Pressure Air-Driven Type 316 Stainless Steel Ball Valves

Direct Mount:
- Max. Pressure for Water, Oil, and Inert Gas: 1500 psi @ 100° F
- Max. Pressure for Steam: 100 psi @ 338° F
- Valve Temp. Range: 0° to 338° F
- Vacuum Rating: 28″ Hg

Bracket Mount:
- Max. Pressure for Water, Oil, and Inert Gas: 1/2″-1″: 2000 psi @ 100° F; 1 1/2″-2″: 1500 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 365° F
- Valve Temp. Range: –20° to +450° F
- Vacuum Rating: 29″ Hg

Perfect for remote on/off control in ultra-high-pressure applications, these valves have the highest pressure rating of our air-driven valves. A Type 316 stainless steel body and ball provide exceptional corrosion resistance. Connections are NPT female. Valves have unrestricted flow (full port).

The actuator has an aluminum housing. Comes with a solenoid that operates on 120 VAC at 60 Hz.

Direct Mount—Seats and packing are modified PTFE and seal is PTFE. Use in vertical pipeline. The actuator has a visual indicator that shows if flow is on or off. Requires an air supply of 80 psi; inlet is 1/4″ NPT female. Solenoid has screw terminals and a DIN electrical connection with a 1/2″ conduit port. Rated NEMA 4X for indoor/outdoor use and resistance to splashing liquids, corrosive agents, and dusty environments. Actuator/solenoid temp range is –4° to +140° F.

Bracket Mount—Seats, seal, and packing are glass-filled PTFE. Can be used in horizontal and vertical pipeline. The actuator requires an air supply of 60 to 125 psi; inlet is 1/4″ NPT female. Solenoid has 12″ wire leads and a DIN electrical connection with a 1/2″ conduit port. Actuator/solenoid temp. range is –4° to +185° F.

Easy-Maintenance Air-Driven Type 316 Stainless Steel Ball Valves

Direct Mount

Direct Mount:
- Max. Pressure for Water, Oil, and Inert Gas: 1/2″-1″: 1500 psi @ 100°F; 1 1/2″: 1200 psi @ 150°F; 2″: 1000 psi @ 200°F
- Max. Pressure for Steam: 150 psi @ 365°F
- Valve Temp. Range: –20° to +450°F
- Vacuum Rating: 29.9″ Hg

Bracket Mount:
- Max. Pressure for Water, Oil, and Inert Gas: 1480 psi @ 100°F
- Max. Pressure for Steam: 100 psi @ 338°F
- Valve Temp. Range: –4° to +338°F
- Vacuum Rating: 28″ Hg

Simplify maintenance—these air-actuated ball valves have a three-piece bolted-body design for access to replace the seats, seal, packing, or ball without unthreading pipe connections. All have a Type 316 stainless steel body and ball to provide exceptional corrosion resistance. Connections are NPT female.

The actuator has an aluminum housing. Air inlet is 1/4″ NPT female, unless noted. Comes with a solenoid that operates on 120 VAC at 60 Hz.

Direct Mount— Seats are glass-filled TFE and seal and packing are PTFE. Valves have unrestricted flow (full port). Can be used in horizontal and vertical pipeline. The actuator has a visual indicator that shows if flow is on or off. Requires an air supply of 40 to 118 psi. Solenoid has screw terminals with a DIN electrical connection. Rated NEMA 4 for indoor/outdoor use and resistance to splashing liquids and dusty environments. Actuator/solenoid temp. range is 32° to 122°F.

Bracket Mount— Seats and seal are modified PTFE and packing is polyethylene. Valves have slightly restricted flow (standard port). Use in horizontal pipeline. The actuator requires an air supply of 80 psi. Solenoid has screw terminals and a DIN electrical connection with a 1/2″ conduit port. Rated NEMA 4X for indoor/outdoor use and resistance to splashing liquids, corrosive agents, and dusty environments. Actuator/solenoid temp. range is –4° to +140°F.

Motor-Driven Brass Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1/2″-1 1/2″: 720 psi @ 150°F; 2″: 600 psi @ 150°F
- Max. Pressure for Steam: 1/2″-1 1/2″: 150 psi @ 366°F; 2″: Not rated
- Valve Temp. Range: 1/2″-1 1/2″: –50° to +450°F; 2″: –20° to +400°F
- Vacuum Rating: 1/2″-1 1/2″: 29.9″ Hg; 2″: 29″ Hg

Get remote on/off control in your pipeline when compressed air is not accessible. Valves have NPTF (Dryseal) female connections. Body is brass, ball is Type 316 stainless steel, and seats and seal are PTFE, unless noted. Can be used in horizontal and vertical pipeline.

The actuator is direct mount. It has a visual indicator that shows if flow is on or off and a manual override. Turns flow on or off in 6 seconds. Temp. range is 40° to 150°F. Housing is thermoplastic. Operates on 120 VAC at 50/60 Hz. Has screw terminals with two 1/2″ conduit connections.

▲ Has fluoroelastomer and TFE seals.

Motor-Driven Brass Ball Valves with Solder End Tube Fittings

- Max. Pressure for Water: 300 psi @ 250°F
- Max. Pressure for Steam: 15 psi @ 250°F
- Valve Temp. Range: 32° to 250°F
- Vacuum Rating: Not rated

Ideal for remote on/off control of water and steam in cooling and heating systems, these motor-driven valves connect to copper pipe with solder-end fittings (required and sold separately). Body, ball, and seats are brass. Seal is Nitrile. Valves have restricted flow (reduced port). Can be used in horizontal and vertical pipeline. UL and C-UL listed.

The actuator is direct mount and has a manual override. It turns flow on or off in 9 seconds. Temp. range is –40° to +160°F. Housing is aluminum. Has 18″ wire leads.

Easy-to-Install Air-Driven PVC Ball Valves

- Max. Pressure: 250 psi @ 70°F
- Valve Temp. Range: 40° to 140°F
- Vacuum Rating: 28″ Hg

Union fittings make these air-driven valves easy to install and allow for maintenance without detaching your pipe connections. Valves come with NPT female and socket-weld (unthreaded) female pipe connections. A PVC body and ball provide good corrosion resistance. Use with Schedule 40 and 80 pipe and fittings in horizontal and vertical pipeline. Valves have PTFE seats, a fluoroelastomer seal, and unrestricted flow (full port). Color is dark gray.

The actuator is bracket mount and has a visual indicator that shows if flow is on or off. Requires an air supply of 80 to 120 psi; inlet is 1/4″ NPT female. Housing is plastic. Comes with a solenoid that operates on 110 VAC at 60 Hz. Has 16″ wire leads with a 1/2″ conduit connection. Rated NEMA 4 for indoor/outdoor use and resistance to splashing liquids and dusty environments. Actuator/solenoid temp. range is 0° to 120°F.

For information about ball valves, see page 426; for actuated ball valves, see page 444.

Motor-Driven Type 316 Stainless Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 720 psi @ 150° F
- Max. Pressure for Steam: ½″-1″: 150 psi @ 366° F; 2″: Not rated
- Valve Temp. Range: –20° to +400° F
- Vacuum Rating: ½″-1″: 29.9″ Hg; 2″: 29″ Hg

These motor-driven valves have a Type 316 stainless steel body and ball for exceptional corrosion resistance. Connections are NPTF (Dryseal) female. Seats and seal are PTFE, unless noted. Can be used in horizontal and vertical pipeline.

The actuator is direct mount. It has a visual indicator that shows if flow is on or off and a manual override. Actuator turns flow on or off in 10 seconds. Temp. range is 40° to 150° F. Housing is thermoplastic, unless noted. Operates on 120 VAC at 50/60 Hz. Has screw terminals with two ½″ conduit connections.

▲ Has fluoroelastomer and TFE seals. Housing is aluminum.

High-Pressure Motor-Driven Type 316 Stainless Steel Ball Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Valve Temp. Range: 0° to 450° F
- Vacuum Rating: Not rated

Get remote on/off control in your high-pressure applications where compressed air is not available. These valves have a Type 316 stainless steel body and ball for exceptional corrosion resistance. Connections are NPT female. Seats are TFM, packing is carbon-filled PTFE, and seal is PTFE. Valves have unrestricted flow (full port). Use in vertical pipeline.

The actuator is direct mount and has a manual override. Temp. range is –22° to +149° F. Housing is aluminum. Operates on 120 VAC at 50/60 Hz. Has screw terminals with two ½″ conduit connections. Rated NEMA 4X for indoor/outdoor use and resistance to splashing liquids, corrosive agents, and dusty environments.

Pipe Size	Valve, End-to-End Lg.	Overall Size Lg.	Overall Size Ht.	On/Off Time, sec.		Each

Motor-Driven PVC Ball Valves

- Max. Pressure: 235 psi @ 100° F
- Valve Temp. Range: 40° to 140° F
- Vacuum Rating: 26″ Hg

Combine lightweight plastic with motor-driven on/off control for applications where compressed air is not accessible. Body and ball are PVC and seats are PTFE. Color is dark gray. Valves have unrestricted flow (full port). Use with Schedule 40 and 80 pipe and fittings in horizontal or vertical pipeline. NSF 61 certified for use with drinking (potable) water.

The actuator is direct mount. It turns flow on or off in 5 seconds. Temp. range is 32° to 110° F. Housing is polypropylene. Operates on 115 VAC at 60 Hz. Has screw terminals and two ½″ conduit connections. Rated NEMA 4X for indoor/outdoor use and resistance to splashing liquids, corrosive agents, and dusty environments.

Water-resistant valves have an EPDM seal. ***Chemical-resistant valves*** have a fluoroelastomer seal. **To Order:** Please specify pipe connection: NPT female or socket weld (unthreaded) female.

Pipe Size	Valve, End-to-End Lg.	Overall Size Lg.	Overall Size Ht.	Water Resistant	Each	Chemical Resistant	Each

Easy-Maintenance Motor-Driven Type 316 Stainless Steel Ball Valves

Bracket Mount

Direct Mount:
- Max. Pressure for Water, Oil, and Inert Gas: ½″-1″: 1500 psi @ 100° F; 1½″: 1200 psi @ 150° F; 2″: 1000 psi @ 200° F
- Max. Pressure for Steam: 150 psi @ 365° F
- Valve Temp. Range: –20° to +450° F
- Vacuum Rating: 29.9″ Hg

Bracket Mount:
- Max. Pressure for Water, Oil, and Inert Gas: 1440 psi @ 100° F
- Max. Pressure for Steam: 100 psi @ 338° F
- Valve Temp. Range: –4° to +338° F
- Vacuum Rating: 28″ Hg

Maintenance of your motor-driven ball valve is easy—these have a three-piece bolted-body design for access to replace the seats, seal, packing, or ball without unthreading your pipe connections. Valves have a Type 316 stainless steel body and ball to provide exceptional corrosion resistance. Connections are NPT female.

The actuator has a visual indicator that shows if flow is on or off and a manual override. Housing is aluminum. Operates on 115 VAC at 60 Hz. Has screw terminals with a ½″ conduit connection. Rated NEMA 4 for indoor/outdoor use and resistance to splashing liquids and dusty environments.

Direct Mount— Seats are glass-filled PTFE and seal and packing are PTFE. Valves have unrestricted flow (full port). Can be used in horizontal and vertical pipeline. Actuator temp. range is 0° to 150° F.

Bracket Mount— Seats and seal are PTFE and packing is polyethylene. Valves have slightly restricted flow (standard port). Use in horizontal pipeline. Actuator temp. range is –40° to +150° F.

Easy-to-Install Motor-Driven PVC and CPVC Ball Valves

- Max. Pressure: 250 psi @ 70° F
- Valve Temp. Range: PVC: 40° to 140° F; CPVC: 40° to 190° F
- Vacuum Rating: 28″ Hg

Union fittings make these motor-driven valves easy to install and allow for maintenance without detaching your pipe connections. A PVC or CPVC body and ball provide good corrosion resistance. Valves come with NPT female and socket-weld (unthreaded) female pipe connections. Seats are PTFE. Valves have unrestricted flow (full port). Use with Schedule 40 and 80 pipe and fittings in horizontal or vertical pipeline.

The actuator is bracket mount and has a visual indicator that shows if flow is on or off. It turns flow on or off in 2.5 seconds. Temp. range is 32° to 110° F. Housing is polypropylene. Operates on 115 VAC at 50/60 Hz. Has screw terminals with a ½″ conduit connection. Rated NEMA 4X for indoor/outdoor use and resistance to splashing liquids, corrosive agents, and dusty environments.

PVC valves have a PVC body and ball. Color is dark gray. ***CPVC valves*** handle higher temperatures than PVC. Body and ball are CPVC. Color is light gray.

Water-resistant valves have an EPDM seal. ***Chemical-resistant valves*** have a fluoroelastomer seal.

About Butterfly Valves

Butterfly valves are ideal for on/off and flow control (throttling) in your pipeline. Just a quarter turn of the handle opens or closes the valve. Like ball valves, butterfly valves provide a tight seal when closed, but their disc design creates less turbulence in your application when changing flow. With a small number of moving parts, these valves are long lasting and easy to maintain. Use manual valves for on/off and flow-control applications. Actuated butterfly valves are for use only in on/off applications.

Please Note: To choose the correct pipe size, measure the unthreaded inside diameter (ID) of your flange or outside diameter (OD) of your pipe and read down to find the corresponding pipe size.

Unthreaded ID or OD	2 3/8″	2 7/8″	3 1/2″	4 1/2″	5 9/16″	6 5/8″	8 5/8″

ANSI Flange Alignment

With Threaded Flange Holes

With Alignment Guides

Extended-Life Ductile Iron Butterfly Valves

Manual Lever with Threaded Flange Holes

Motor Driven with Alignment Guides

Water Resistant:
- Max. Pressure: 250 psi @ 225° F
- Temp. Range: –20° to +225° F

Oil Resistant:
- Max. Pressure: 250 psi @ 180° F
- Temp. Range: –20° to +180° F

Chemical Resistant:
- Max. Pressure: 250 psi @ 300° F
- Temp. Range: –20° to +300° F

Spend less time on valve maintenance—ductile iron is stronger and more pressure resistant than cast iron for a longer service life. Valves fit ANSI Class 125 and 150 flanges with the same pipe size. Meet API (American Petroleum Institute) 609 for flow regulation and MSS-SP-67.

Valves with threaded flange holes have a hole pattern that matches ANSI flanges with the same pipe size for connection between two flanges or to a single flange. You can disassemble your pipeline on one side of the valve without depressurizing the other side. Max. pressure for use with a single flange is 200 psi. *Valves with alignment guides* must be sandwiched between two flanges.

Manual valves with lever can be locked in position using a padlock (not included) with a shackle diameter of 1/4″.

Air-driven valves open and close faster than motor-driven valves; they turn flow on or off in one second. Require an air supply of 80 psi. Actuator temp. range is –40° to +212° F. *Air-to-open/air-to-close valves* are the most popular form of actuated butterfly valve. 2″ to 4″ sizes have a 1/8″ NPT female air inlet; 5″ and 6″ sizes have a 1/4″ NPT female air inlet. *Air-to-open/spring-close valves* shut off flow automatically when the air turns off. 2″ size has a 1/8″ NPT female air inlet; 3″ to 6″ sizes have a 1/4″ NPT female air inlet.

Solenoid valve (sold separately) is necessary to operate air-driven butterfly valves. Operates on 120 VAC at 60 Hz. Has 18″ wire leads and a 1/2″ conduit connection. Solenoid temp. range is 5° to 140° F. Rated NEMA 4 for indoor/outdoor use and resistance to splashing liquids and dusty environments.

Motor-driven valves turn flow on or off in 15 seconds, except valves with 6″ pipe size, which turn flow on or off in 30 seconds. Actuator temp. range is –40° to +140° F. Operate on 110 VAC at 50/60 Hz. Have screw terminals with a 1/2″ conduit connection.

Water-Resistant Valves— Disc is ductile iron and seat is EPDM.
Oil-Resistant Valves— Disc is ductile iron and seat is Buna-N.
Chemical-Resistant Valves— Disc is Type 316 stainless steel and seat is fluoroelastomer.

To Order: Please specify water resistant or oil resistant where necessary.

For information about butterfly valves, see page 448. For information about pipe size, see pages 2-3.

Air Actuators for Ball and Butterfly Valves

Use your compressed air system to operate valves remotely—these actuators open and close ball valves, butterfly valves, and dampers for use in a wide range of fluid-handling and chemical-processing applications. Actuators have a Namur hole pattern on the bottom that meets ISO 5211 for attaching your valve. Require an air supply of 40 to 115 psi. Housing is aluminum. Actuator temp. range is 32° to 175° F. *Air-to-open/spring close* shut off flow automatically when the air turns off.

Solenoid valve (sold separately) is necessary to operate actuators. Operates on 120 VAC at 60 Hz. Has 18″ wire leads. Solenoid temp. range is 32° to 175° F. Rated NEMA 4 for indoor/outdoor use and resistance to splashing liquids and dusty environments.

Extended-Life Ductile Iron Butterfly Valves with Grooved Ends

- Max. Pressure for Water: 300 psi @ 73° F
- Temp. Range: –20° to +200° F

Get the long service life of durable ductile iron combined with the easy installation and maintenance of grooved-end pipe connections. Use with grooved-end pipe fittings on page 80. Valves are ideal for use in HVAC and water-based applications. Body is ductile iron with an NSF-certified polyamide coating, disc is EPDM-coated ductile iron, and seat is water-resistant EPDM. Valves have 10 flow-control (throttling) positions; the handle can be locked in position using a padlock (not included) with a shackle diameter of 5/16″. Valves meet MSS-SP-67.

Pipe Size	OD	ID	End-to-End Lg. (A)	O'all Ht.		Each
2″	2⅜″	2 5/16″	3 5/16″	8 7/16″	3953T51	$163.93
3″	3½″	3⅜″	3⅞″	9 3/16″	3953T53	212.57
4″	4½″	4 5/16″	4 9/16″	10 15/16″	3953T54	265.21
6″	6⅝″	6 7/16″	5⅞″	14 5/16″	3953T56	508.44

Cast Iron Butterfly Valves

Water Resistant:
- Max. Pressure: 200 psi @ 275° F
- Temp. Range: –30° to +275° F

Oil Resistant:
- Max. Pressure: 200 psi @ 180° F
- Temp. Range: 10° to 180° F

Chemical Resistant:
- Max. Pressure: 200 psi @ 275° F
- Temp. Range: 10° to 275° F

A good option for low-pressure applications, these valves are ideal for use in HVAC systems. Valves fit ANSI Class 125 and 150 flanges with the same pipe size. All have a nickel-plated ductile iron disc. Valves meet MSS-SP-67.

Valves with threaded flange holes have a hole pattern that matches ANSI flanges with the same pipe size for connection between two flanges or to a single flange. You can disassemble your pipeline on one side of the valve without depressurizing the other side. Max. pressure for use with a single flange is 200 psi. *Valves with alignment guides* must be sandwiched between two flanges.

Manual valves with lever can be locked in position using a padlock (not included) with a shackle diameter of 5/16″.

Air-driven valves open and close faster than motor-driven valves; they turn flow on or off in less than two seconds. Require an air supply of 80 to 100 psi; inlet is ¼″ NPT female. Actuator temp. range is –10° to +176° F.

Solenoid valve (sold separately) is necessary to operate air-driven butterfly valves. Operates on 120 VAC at 60 Hz. Has 18″ wire leads and a ½″ conduit connection. Solenoid temp. range is 5° to 140° F. Rated NEMA 4 for indoor/outdoor use and resistance to splashing liquids and dusty environments.

Motor-driven valves are ideal for use where compressed air is not accessible. Operate on 120 VAC at 60 Hz. Have screw terminals with a ½″ NPT female conduit connection. Actuator temp. range is –13° to +131° F. *Valves with 3″ pipe size* turn flow on or off in 13 seconds; *valves with 4″ pipe size* turn flow on or off in 25 seconds.

Water-Resistant Valves— Seat is EPDM.
Oil-Resistant Valves— Seat is Buna-N.
Chemical-Resistant Valves— Seat is fluoroelastomer.
To Order: Please specify water resistant or oil resistant where necessary.

Sure-Fit Flanged Cast Iron Butterfly Valves

Water Resistant:
- Max. Pressure: 200 psi @ 73°F
- Temp. Range: –20° to +225°F

Oil Resistant:
- Max. Pressure: 212 psi @ 73°F
- Temp. Range: –20° to +180°F

Upgrade your industry standard flanged gate or globe valve for quicker on/off control and throttling capabilities—these have the same end-to-end length as valves of the same pipe size to swap out easily. Valves have threaded ANSI Class 125 and 150 flanges and fit flanges with the same pipe size. Body is polyamide-coated cast iron. They have 10 flow-control (throttling) positions. The handle can be locked in position using a padlock (not included) with a shackle diameter of 5/16″. Valves meet ANSI B16.10, MSS-SP-25, and -67.

Choose from ***water-resistant valves*** with an EPDM seat and EPDM-coated ductile iron disc and ***oil-resistant valves*** with a Buna-N seat and a Buna-N-coated ductile iron disc.

To Order: Please specify water resistant or oil resistant.

NPT Threaded Bronze Butterfly Valves

- Max. Pressure for Water, Oil, and Inert Gas: 175 psi @ 100°F
- Temp. Range: –20° to +275°F

Swap out your ball valve with NPT female connections for the flow control (throttling) of a butterfly valve. Body is bronze, disc is Type 304 stainless steel, and seat is chemical-resistant fluoroelastomer.

Manual valves are UL listed and CSA and CSA-US certified. *Valves with flow-indicating lever* point to the percentage the valve is open.

Actuated air-driven valves open and close faster than motor-driven valves; they turn flow on or off in two seconds. All are air-to-open/air-to-close. Require an air supply of 80 psi; inlet is 1/4″ NPT female. Come with a solenoid that operates on 120 VAC at 60 Hz. Have screw terminals and a DIN electrical connection with a 1/2″ conduit port. Actuator/solenoid temp. range is 5° to 104°F.

Actuated motor-driven valves turn flow on or off in 2.5 seconds, except 2″ pipe size, which turns flow on or off in 5 seconds. Operate on 115 VAC at 60 Hz. Have screw terminals with a 1/2″ conduit port. Actuator temp. range is –40° to +140°F. Rated NEMA 4 for indoor/outdoor use and resistance to splashing liquids and dusty environments.

Chemical-Resistant Cast Iron Butterfly Valves

- Max. Pressure for Water, Oil, and Inert Gas: 150 psi @ 150°F
- Temp. Range: 10° to 150°F

The right choice for your applications with petroleum-based liquids—seat is PTFE-lined Buna-N for superior chemical resistance. Valves have threaded flange holes and fit ANSI Class 125 and 150 flanges with the same pipe size. Body is cast iron and disc is Type 316 stainless steel. They have 10 flow-control (throttling) positions. The handle can be locked in position using a padlock (not included) with a shackle diameter of 5/16″. Valves meet API (American Petroleum Institute) 609 for flow regulation and MSS-SP-67.

Lightweight Aluminum Butterfly Valves

Water Resistant:
- Max Pressure: 150 psi @ 250°F
- Temp. Range: –40° to +250°F

Oil Resistant:
- Max Pressure: 150 psi @ 212°F
- Temp. Range: 0° to +212°F

An aluminum body provides strength and corrosion resistance at a lighter weight than other metal butterfly valves. Valves have alignment guides and fit ANSI Class 125 and 150 flanges with the same pipe size. Disc is Type 316 stainless steel. Valves have 10 flow-control (throttling) positions. The handle can be locked in position using a padlock (not included) with a shackle diameter of 3/16″.

Choose from ***water-resistant valves*** with an EPDM seat and ***oil-resistant valves*** with a Buna-N seat.

To Order: Please specify water resistant or oil resistant.

Ultra-High-Performance Butterfly Valves

- Max. Pressure for Water, Oil, and Inert Gas: 285 psi @ 100°F
- Temp. Range: Stainless Steel: –100° to +500°F
  Steel: –20° to +500°F

Designed to operate at a low torque to minimize wear and provide a long service life, these valves have the highest temperature and pressure ratings of our flange connection butterfly valves. Seat is PTFE for good chemical resistance and use with steam; max. pressure for steam is 50 psi at 400°F. Valves fit ANSI Class 150 flanges with the same pipe size. Disc is Type 316 stainless steel. Valves have 10 flow-control (throttling) positions. The handle can be locked in position using a padlock (not included) with a shackle diameter of 5/16″. Valves meet API (American Petroleum Institute) 609 for flow regulation, ANSI B16.5/B16.34, MSS-SP-25, -61, and -68.

For information about butterfly valves, see page 448. For information about pipe size, see pages 2-3.

Sanitary Stainless Steel Butterfly Valves

Water Resistant:
- Max. Pressure:
  EPDM:
  147 psi @ 300° F
  Silicone:
  147 psi @ 450° F
- Temp. Range:
  EPDM:
  –60° to +300° F
  Silicone:
  –80° to +450° F

Chemical Resistant:
- Max. Pressure:
  Fluoroelastomer:
  147 psi @ 400° F
  PTFE:
  60 psi @ 450° F
- Temp. Range:
  Fluoroelastomer:
  –20° to +400° F
  PTFE:
  –40° to +450° F

Ideal for applications that require cleanliness, these valves are polished to a fine finish to inhibit bacterial growth and allow for cleaning in place. *Valves with 12 flow-control (throttling) positions* have a handle that can be locked in position using a padlock (not included) with a shackle diameter of 1/4″. ***Quick-clamp valves*** connect with quick-clamp fittings on pages 208-210. ***Butt-weld valves*** are unthreaded; they are for welded connections.

Type 304L stainless steel valves have a Type 304L stainless steel body and disc.
Type 316L stainless steel valves have a Type 316L stainless steel body and disc.

Choose from ***water-resistant valves*** with an EPDM seat, ***water-resistant valves*** with a silicone seat, ***chemical-resistant valves*** with a fluoroelastomer seat, and ***chemical-resistant valves*** with a PTFE seat. **To Order:** Please specify water resistant with an EPDM or a silicone seat or chemical resistant with a fluoroelastomer or a PTFE seat.

Corrosion-Resistant Type 316 Stainless Steel Butterfly Valves

Water Resistant:
- Max. Pressure:
  150 psi @ 250° F
- Temp. Range:
  –40° to +250° F

Oil Resistant:
- Max. Pressure:
  150 psi @ 212° F
- Temp. Range:
  0° to +212° F

A Type 316 stainless steel body and disc provide excellent corrosion resistance. Valves have threaded flange holes and fit ANSI Class 125 and 150 flanges with the same pipe size. They have 10 flow-control (throttling) positions. The handle can be locked in position using a padlock (not included) with a shackle diameter of 3/16″. Choose from ***water-resistant valves*** with an EPDM seat and ***oil-resistant valves*** with a Buna-N seat. **To Order:** Please specify water resistant or oil resistant.

Tuff-Lite PVC Butterfly Valves

- Max. Pressure for Water:
  150 psi @ 73° F
- Temp. Range:
  40° to 140° F

A PVC body and disc provide good strength with the lightest weight of all our butterfly valves. They have an EPDM seat for use in general-purpose water applications. All fit ANSI Class 125 and 150 flanges with the same pipe size; use with Schedule 40 and 80 pipe and fittings. Valves have 12 flow-control (throttling) positions. The handle can be locked in position using a padlock (not included) with a shackle diameter of 3/16″.

Note: Valves have four alignment guides (unthreaded holes) to assist in alignment between two flanges. Guides do not match ANSI flange pattern; use two of the four holes for alignment.

Pipe Size	Flange Thick.	O'all Ht.	Fits ANSI Flange OD	Bolt Circle Dia.	Bolt Size	Bolt Hole Qty.		Each
3″	1 15/16″	9 1/8″	7 1/2″	6″	5/8″-11	4	4842K22	$120.22

PVC and CPVC Butterfly Valves

- Max. Pressure: 150 psi @ 70° F
- Temp. Range: PVC: 40° to 140° F; CPVC: 40° to 200° F

Lightweight and corrosion resistant, these valves have alignment guides and fit ANSI Class 125 and 150 flanges with the same pipe size; use with Schedule 40 and 80 pipe and fittings.

Water-resistant valves are NSF 61 certified for use with drinking (potable) water. Seat is EPDM.
Chemical-resistant valves have a fluoroelastomer seat.

Manual Valves— Have seven flow-control (throttling) positions. The handle can be locked in position using a padlock (not included) with a shackle diameter of 7/16″. All are FM approved. ***PVC valves*** have a PVC body and disc. ***CPVC valves*** handle higher temperatures than PVC; body and disc are CPVC.

Air-Driven Valves— Great for remote on/off control, these turn flow on or off in about one second. All are air-to-open/spring close. Body is PVC and disc is polypropylene. Actuator requires an air supply of 80 to 120 psi; inlet is 1/4″ NPT female. Come with a solenoid that operates on 120 VAC at 60 Hz. Have 12″ wire leads with a 1/2″ conduit connection. Actuator/solenoid temp. range is 0° to 176° F.

About Gate Valves

Gate valves are used to start or stop flow in a pipeline. They are designed for use either fully open or fully closed and are not for flow control (throttling). All have a gate that provides a tight seal when closed. Most gate valves require multiple turns of a wheel handle to open or close. Gate valves with a class rating correspond to pressure specifications of ANSI B16.34. Valves with flanged connections can be used with class-rated flanges that correspond to ANSI B16.5 for dimensions.

Valves with a rising stem have a stem that rises as the valve is opened. They provide a visual indication that flow is on or off and allow for easy access for stem lubrication. Because the stem does not touch your process media, these have a longer service life than valves with a nonrising stem. ***Valves with a nonrising stem*** have a stem that stays at the same height whether it is open or closed, so they are good for use in tight spaces.

Determining Pipe Size of Your Valve: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and find the corresponding pipe size listed in the chart.

Threaded ID or OD	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″	6 5/8″	8 5/8″

Bronze Gate Valves

Class 125:
- Max. Pressure for Water, Oil, and Inert Gas: 200 psi @ 100°F
- Max. Pressure for Steam: 125 psi @ 353°F
- Temp. Range: –20° to +406°F

Class 150:
- Max. Pressure for Water, Oil, and Inert Gas: 300 psi @ 100°F
- Max. Pressure for Steam: 150 psi @ 366°F
- Temp. Range: –20° to +406°F

Class 200:
- Max. Pressure for Water, Oil, and Inert Gas: 400 psi @ 100°F
- Max. Pressure for Steam: 200 psi @ 388°F
- Temp. Range: –20° to +550°F

Class 300:
- Max. Pressure for Water, Oil, and Inert Gas: 1000 psi @ 100°F
- Max. Pressure for Steam: 300 psi @ 422°F
- Temp. Range: –20° to +550°F

A bronze body and gate provide strength and corrosion resistance. Connections are NPT female. Packing is graphite. Valves meet MSS-SP-80.

Bronze Gate Valves with Solder-End Connections

Nonrising Stem

- Max. Pressure for Water, Oil, and Inert Gas: 200 psi @ 100°F
- Max. Pressure for Steam: 15 psi @ 250°F
- Temp. Range: –20° to +250°F

Incorporate on/off control in your copper tubing lines—these valves have solder end (unthreaded) female connections. Body and gate are bronze and packing is graphite. Valves meet MSS-SP-80 and are rated Class 125.

Tube Size ♦	Actual Tube OD	End-to-End Lg.	Rising Stem	Rising Stem Each	Nonrising Stem	Nonrising Stem Each

Quick-Opening Brass Gate Valves

1″ and 1 1/4″ Pipe Size:
- Max. Pressure for Oil: 125 psi @ 120°F
- Max. Pressure for Steam: Not rated
- Temp. Range: +32° to +150°F

1 1/2″-3″ Pipe Size:
- Max. Pressure for Water and Oil: 200 psi @ 70°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –40° to +150°F

Quickly transition between full flow and shut off with a lever instead of the common multiple-turn wheel handle. Connections are NPT female. Body and gate are brass. *Valves with 1″ and 1 1/4″ pipe size* have a Buna-N seal; *valves with 1 1/2″ to 3″ pipe size* have PTFE fiber packing.

Valves with a spring-assist lever close more easily than lever valves, but still require an operator.

Pipe Size	End-to-End Lg.	Lever	Lever Each	Spring-Assist Lever	Spring-Assist Lever Each

For information about gate valves, see page 452. For information about pipe size, see pages 2-3.

Flanged Cast Iron Gate Valves

Cast Iron:
- Max. Pressure for Water, Oil, and Inert Gas: 200 psi @ 150°F
- Max. Pressure for Steam: 125 psi @ 353°F
- Temp. Range: –20° to +450°F

Epoxy-Coated Cast Iron:
- Max. Pressure for Water: 200 psi @ 140°F
- Max. Pressure for Steam: Not rated
- Temp. Range: +33° to +140°F

A rugged cast iron body provides strength and durability in these industry standard gate valves. They have unthreaded ANSI Class 125 flange connections that bolt to ANSI flanges of the same pipe size for simple installation. Meet ANSI B16.10 and MSS-SP-70.

Cast Iron— Gate is cast iron and packing is synthetic fiber with graphite.

Epoxy-Coated Cast Iron— An epoxy coating on the valve body provides extra corrosion resistance. Gate is rubber-coated cast iron for resistance to large pressure drops in your pipeline. Valves meet ASTM A126 Class B specifications and AWWA (American Water Works Association) Standard C509.

Epoxy-coated valves with a rising stem are ideal for fire-main shut off and distribution service. Gate is SBR rubber-coated and packing is graphite fiber. UL listed and FM approved.

Epoxy-coated valves with a nonrising stem are good for use with drinking water and sewage disposal. Gate is encased in Buna-N and packing is Buna-N.

Boiler Blow-Off Cast Iron Gate Valves

- Max. Pressure for Water: 250 psi @ 350°F
- Max. Pressure for Steam: Not rated
- Temp. Range: 33° to 350°F

The rotating gate makes these valves perfect for boiler blow-off applications. Connections are NPT female. Body and gate are cast iron and packing is EPDM and nylon. Meet ASME Section 1 Codes for Boiler and Pressure Vessels, ANSI B16.31 for power piping, and ANSI B31.1.

Lever valves open and close quickly.

Wheel handle valves open and close slowly to provide more controlled, shock-resistant flow. Stem is nonrising.

Pipe Size	End-to-End Lg.	Lever	Each	Wheel Handle	Each
1"	3⅝"	4692K31	$485.51	7917T51	$943.36

2"	4⅝"	4692K34	836.07	7917T54	1,293.11

Quick-Opening Cast Iron Air-Blast Gate Valves

- Max. Pressure for Air and Inert Gas only:
  1"-3": 20 psi @ 1000°F
  4": 10 psi @ 1000°F
  6": 5 psi @ 1000°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –40° to +1000°F

Often used as blast gates in low-pressure air conditioning and ventilating systems, these valves have a pull handle for quick opening and closing. A thumb screw locks the gate in position. Body is cast iron, gate is Type 304 stainless steel, and packing is graphite. Stem is rising.

Flanged valves have unthreaded holes that fit ANSI Class 125 and 150 flanges with the same pipe size.

NPT Female

Pipe Size	End-to-End Lg.		Each	Pipe Size	End-to-End Lg.		Each

Flanged Cast Iron Knife Gate Valves

For Dry Materials:
- Max. Pressure for Water and Inert Gas: 150 psi @ 400°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –50° to +400°F

For Thick Liquids:
- Max. Pressure for Water and Inert Gas: 150 psi @ 212°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –50° to +212°F

A knife-style gate cuts through materials that would otherwise prevent valve closure. Unthreaded holes fit ANSI Class 150 flanges with the same pipe size. Body is cast iron with a 300 series stainless steel liner and gate. Stem is rising.

For Dry Materials— Seat is Type 316 stainless steel for use with dry media.

For Thick Liquids— Seat is EPDM for a tight seal when used with viscous liquids.

Pipe Size	End-to-End Lg.	Fits ANSI Flange OD	Bolt Circle Dia.	Bolt Size	Bolt Hole Qty.		Each
For Dry Materials							
2"	1⅞"	6½"	4¾"	⅝"-11	4	6312T31	$416.39

Lockable Safety-Air-Exhaust Gate Valves

- Max Pressure for Compressed Air:
  ½"-1": 250 psi @ 250°F
  1½" and 2": 125 psi @ 250°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –40° to +250°F

Meet OSHA requirements for safety and control in your compressed air system. When closed, these valves vent air pressure through the exhaust port so you can disconnect air tools safely. Connections are NPT female. Gate is aluminum and seals are polyethylene and acetal. Stem is rising. Valves lock in any of four positions using a padlock (not included) with a shackle diameter of ⅜".

Valves with ½" to 1" pipe size have an aluminum body; *valves with 1½" and 2" pipe size* have a cast iron body.

Pipe Size	End-to-End Lg.	Exhaust Port, dia.		Each
½"	2¾"	¼"	4707K34	$280.78
¾"	2¾"	¼"	4707K35	259.99
1"	2¾"	¼"	4707K36	265.03
1½"	3½"	½"	4707K37	691.54
2"	3½"	½"	4707K38	703.15

For information about gate valves, see page 452. For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″	4 1/2″	6 5/8″

Super-High-Pressure Steel Gate Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1975 psi @ 100° F
- Max. Pressure for Steam: 715 psi @ 800° F
- Temp. Range: –20° to +800° F

A forged steel body and gate provide strength and safety in super-high-pressure applications. Valves are rated Class 800, making them ideal for use in petroleum, chemical, and power-processing systems. Connections are female. Packing is graphite. Stem is rising. Valves meet API (American Petroleum Institute) 602 and ASTM A105N.

Socket-weld valves are unthreaded; they are for welded connections with unthreaded pipe (male).

Flanged Steel Gate Valves

- Max. Pressure for Water, Oil, and Inert Gas: 285 psi @ 100° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: –20° to +800° F

Get the strength and rigidity of steel combined with the ease of installation of flanged connections. Simply bolt these valves with threaded ANSI Class 150 flange connections to ANSI flanges of the same pipe size. Body and gate are steel and packing is graphite. Stem is rising. Valves meet API (American Petroleum Institute) 600 and ASTM A216-WCB.

Pipe Size	End-to-End Lg.	OD	Fits ANSI Flange: Bolt Circle Dia.	Bolt Size	Bolt Hole Qty.		Each

Quick-Opening PVC Gate Valves

- Max Pressure for Water: See table
- Temp. Range: 35° to 120° F

Transition quickly between full flow and shut off—these valves have a pull handle instead of the common multiple-turn wheel handle. Use with Schedule 40 pipe and fittings. Body is white PVC. Stem is rising. ***Valves with a glass-filled polypropylene gate*** have a Buna-N seat. ***Valves with a Type 304 stainless steel gate*** have a Santoprene rubber seat.

Socket connections are female unthreaded; they are for connection to male unthreaded pipe and fittings. ***Unthreaded outlet connections*** are for dispensing or connection to hose using a hose clamp.

For information about gate valves, see page 452. For information about pipe size, see pages 2-3.

PVC and Acetal Gate Valves

- Max. Pressure: 150 psi @ 73°F
- Temp. Range: PVC: 33° to 140°F Acetal: 33° to 180°F

Designed for use with liquids, these valves are NSF 61 certified for use with drinking (potable) water. Connections are female. Stem is nonrising. ***Socket-weld valves*** are unthreaded; they are for welded connections with unthreaded pipe (male).

PVC Valves— Body and ball are PVC and seal is EPDM. Choose from white valves for use with only Schedule 40 pipe and fittings and gray valves for use with Schedule 40 and Schedule 80 pipe and fittings. **To Order:** Please specify color: white or gray.

Acetal Valves— Handle higher temperatures than PVC and have a fluoroelastomer seal for good chemical resistance. Body and ball are acetal. Color is bronze.

High-Pressure PVC and CPVC Gate Valves

- Max. Pressure: 200 psi @ 73°F
- Temp. Range: PVC: 40° to 140°F CPVC: 40° to 200°F

Thick walls and rugged construction withstands high pressure. NSF 61 certified for use with drinking (potable) water. Use with Schedule 40 and 80 pipe and fittings. Connections are female. Stem is nonrising. Color is gray. ***Socket-weld valves*** are unthreaded; they are for welded connections with unthreaded pipe (male).

Oil-Resistant PVC Valves— A Buna-N seal makes these good for use with oil and water in general purpose applications. Body is PVC and gate is polypropylene.

Chemical-Resistant PVC and CPVC Valves— Have a fluoroelastomer seal for good chemical resistance. *PVC valves* have a PVC body and a polypropylene gate. *CPVC valves* handle higher temperatures than PVC. Body and gate are CPVC.

About Globe Valves

Globe valves are used for frequent on/off control and flow control (throttling) in your pipeline. All have a disc that provides a tight seal when closed. Most globe valves require multiple turns of a wheel handle to open or close. With seats that extend into the center of the valve, they are not for applications that require unobstructed flow. Globe valves with a class rating meet pressure specifications of ANSI B16.34.

Valves with a rising stem have a stem that rises as the valve is opened. They provide a visual indication that flow is on or off and allow for easy access for stem lubrication. Because the stem does not touch your process media, these have a longer service life than valves with a nonrising stem. ***Valves with a nonrising stem*** have a stem that stays at the same height whether it is open or closed, so they are good for use in tight spaces.

Bronze Globe Valves

Class 125:
- Max. Pressure for Water, Oil, and Inert Gas: 200 psi @ 150°F
- Max. Pressure for Steam: 125 psi @ 353°F
- Temp. Range: –20° to +406°F

Class 150:
- Max. Pressure for Water, Oil, and Inert Gas: 300 psi @ 150°F
- Max. Pressure for Steam: 150 psi @ 366°F
- Temp. Range: –20° to +406°F

Class 200:
- Max. Pressure for Water, Oil, and Inert Gas: 400 psi @ 150°F
- Max. Pressure for Steam: 200 psi @ 388°F
- Temp. Range: –20° to +550°F

Class 300:
- Max. Pressure for Water, Oil, and Inert Gas: Inline: 1000 psi @ 150°F Elbow: 600 psi @ 150°F
- Max. Pressure for Steam: 300 psi @ 421°F
- Temp. Range: –20° to +550°F

A bronze body provides strength and corrosion resistance. Connections are NPT female. Packing is graphite. Stem is rising. Meet MSS-SP-80.

Inline— Class 125 have a bronze disc; Class 150 have a PTFE disc; Class 200 have a bronze disc; and Class 300 have a Type 420 stainless steel disc.

Elbow— Class 125 have a brass disc; Class 150 have a PTFE disc; and Class 300 have a bronze disc.

For information about globe valves, see page 455. For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″

Bronze Globe Valves with Solder-End Connections

- Max. Pressure for Water, Oil, and Inert Gas: 200 psi @ 150°F
- Max. Pressure for Steam: 15 psi @ 250°F
- Temp. Range: –20° to +406°F

Incorporate on/off and flow control (throttling) in your applications with copper tubing—connections are solder end (unthreaded) female. Body is bronze, disc is TFE, and packing is graphite fiber. Stem is rising. Valves are rated Class 125.

Tube Size ♦	Actual Tube OD	End-to-End Lg.		Each
1/2″	5/8″	2 9/16″	4947K42	$69.54
3/4″	7/8″	3 1/16″	4947K43	92.49

1 1/4″	1 3/8″	4 5/16″	4947K46	174.18
1 1/2″	1 5/8″	4 11/16″	4947K47	207.26
2″	2 1/8″	5 5/8″	4947K48	318.65

♦ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

Cleaned and Bagged Cryogenic Globe Valves

Compact

Extended Handle

- Max. Pressure for Water, Oil, and Inert Gas: 1/4″-1″: 600 psi @ 150°F; 1 1/2″ and 2″: 400 psi @ 150°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –320° to +150°F

Cleaned and bagged to meet CGA G-4.1 standards for oxygen service, these valves withstand extremely cold temperatures. All have a CTFE seat for a tight seal at cryogenic temperatures. Connections are NPT female. Packing is PTFE.

Compact valves are commonly used with portable liquid oxygen cylinders. Body is brass. Stem is non-rising.

Extended-handle valves are designed to keep valve components from freezing. Body is bronze, disc is brass, and seal is glass-filled PTFE. Stem is rising.

Pipe Size	End-to-End Lg.	O'all Height		Each

Type 316 Stainless Steel Globe Valves

Socket Weld

- Max. Pressure for Water, Oil, and Inert Gas: 200 psi @ 350°F
- Max. Pressure for Steam: 120 psi @ 350°F
- Temp. Range: 0° to 350°F

A Type 316 stainless steel body and disc provide exceptional corrosion resistance. Connections are female. Packing is PTFE. Stem is rising.

Socket-weld valves are unthreaded; they are for welded connections with unthreaded pipe (male). Meet ASTM A351.

BSPT (British Standard Pipe Taper) valves are for connection with BSPT threads.

Pipe Size	End-to-End Lg.	*NPT*	Each	*Socket Weld*	Each	*BSPT*	Each

Low-Pressure Bronze Globe Valves

- Max. Pressure for Water: 175 psi @ 150°F
- Max. Pressure for Steam: Not rated
- Temp. Range: –20° to +150°F

A good choice for low-pressure plumbing applications, these valves are commonly used in boiler maintenance to discharge water. Connections are NPT female. Body is bronze, disc is EPDM, and packing is graphite fiber. Stem is rising. *Valves with 1/2″ to 2″ pipe size* are UL listed for trim and drain use in fire-protection services.

Pipe Size	End-to-End Lg.		Each	Pipe Size	End-to-End Lg.		Each

Quick-Opening Globe Valves

Hand-Grip Lever

Pull Lever

- Max. Pressure for Water, Oil, and Inert Gas: See table
- Max. Pressure for Steam: Brass: Not rated; Bronze: 200 psi @ 550°F
- Temp. Range: Brass: 0° to +200°F; Bronze: –20° to +550°F

Perfect for applications that require manual discharge of liquids and compressed air, these valves provide fast-opening, self-closing operation. Commonly used in spraying, washing, and liquid-transfer applications. Connections are NPT female. Stem is nonrising.

Brass Valves— Body is brass and disc and packing are Buna-N. Choose from valves with a hand-grip lever and valves with a pull lever. ***Valves with a pull lever*** have a hole in the lever to attach a cord or chain for operation from below. **To Order:** Please specify hand-grip or pull lever.

Bronze Valves— Body and disc are bronze and packing is Kevlar fiber. All have a pull lever; lever has a hole to attach a cord or chain for operation from below. Valves meet MSS-SP-80 and are rated Class 200.

Super-High-Pressure Steel Globe Valves

- Max. Pressure for Water, Oil, and Inert Gas: 1975 psi @ 100°F
- Max. Pressure for Steam: 715 psi @ 800°F
- Temp. Range: –20° to +800°F

Ideal for use in petroleum, chemical, and power-processing systems, body and disc are forged steel for strength in extreme-pressure applications. Connections are NPT female. Packing is graphite. Stem is rising. Valves meet API (American Petroleum Institute) 602, ASTM A105N, and are rated Class 800.

Pipe Size	End-to-End Lg.		Each	Pipe Size	End-to-End Lg.		Each

PVC Globe Valves

- Max. Pressure: 150 psi @ 70° F
- Temp. Range: 40° to 120° F

A PVC body provides chemical resistance at a light weight. For use with Schedule 40 and 80 pipe and pipe fittings. Stem is rising. NPT connections are female.

Compact valves are ideal for confined spaces and are for use with water. Packing is EPDM, disc is polypropylene, and color is blue-gray.

Compact *Y Style*

Y-style valves are NSF 61 certified for use with drinking (potable) water. Seal is EPDM, disc is polyethylene, and color is dark gray.

Multiport Diverting Brass Plug Valves

- Max. Pressure for Water, Oil, and Inert Gas: 250 psi @ 70° F
- Temp. Range: –60° to +400° F

A quarter turn of the handle diverts flow through multiple ports. Body is brass, seals are fluoroelastomer, and plug is PTFE. Valves have four 1/4"-20 holes for mounting and panel mount in a 7/8" dia. cutout. Use with compressed air. Connections are NPTF (Dryseal) female.

Three-way valve has one inlet and two outlets.
Four-way valve has two inlets and two outlets.

Pipe Size	End-to-End Lg.	Three Way	Each	Four Way	Each
1/4"	1 7/8"	8159K542	$122.64	8159K543	$122.64

Fuel Shut-Off Brass Plug Valves

- Max. Pressure: Standard: 30 psi @ 70° F; UL Listed and UL/Marine: 15 psi @ 70° F
- Temp. Range: –40° to +250° F

Body and plug are brass, and seals are Buna-N. Connections are NPTF (Dryseal). ***Standard*** valves are for use with gasoline, oil, kerosene, LP gas, and gas/air mixtures. ***UL listed*** valves are for fuel oils (1 and 2) and LP gas. ***UL/marine*** valves are for use in marine environments.

Standard Male × Female

Pipe Size	End-to-End Lg.	Standard	Each	UL Listed	Each	UL/Marine	Each

Natural Gas Plug Valves

- Max. Pressure for Natural Gas: See table
- Temp. Range: Bronze Body: +32° to +125° F; Cast Iron Body: –20° to +150° F

Use with natural gas as a main-line shut-off. All have a bronze plug and body with a top handle stop, except valves with 100 max. psi, which have a cast iron body and do not have a handle stop. The top handle stop prevents the valve from turning past the fully open or fully closed position. Connections are NPT female. ***Square-head*** valves require a wrench to open or close (sold separately).

Plastic Plug Valves with Push-to-Connect Tube Fittings

- Max. Pressure: 125 psi @ 73° F
- Temp. Range: 33° to 140° F

Push-to-connect tube fittings and a quick quarter-turn shut-off make these valves easy to install and use. All valves have EPDM seals for use with drinking water.

Polypropylene valves are white.

PVC valves are gray.

About Needle Valves

Needle valves are designed for precision flow control. A finely threaded needle, or tapered plug, on the end of the valve stem functions as the control. Needle valves with packing have a nut that must be tightened to pack down the seat if it starts to leak, while valves with a seal are maintenance free.

Cv factor (coefficient of volume) is the amount of water (in gpm) with a specific gravity of 1 at 60° F that will pass through a fully open valve with a pressure drop of 1 psi. For pressure drops other than 1 psi, use this formula:

$$\text{GPM} = \text{Cv}\sqrt{\frac{\text{Pressure Drop}}{\text{Specific Gravity of the Liquid}}}$$

Needle Valves

- Max. Pressure for Water, Oil, and Inert Gas: Brass: 2000 psi @ 400° F; Steel and Type 303 Stainless Steel: 5000 psi @ 400° F
- Temp. Range: –15° to +400° F

The included locknut prevents unwanted changes in adjustment. Seals are fluoroelastomer and PTFE, and seat is metal-to-metal. Connections are NPTF (Dryseal) female or BSPT (British Standard Pipe Taper thread) female.

Brass valves are ideal for water and have a brass needle. ***Steel*** valves are ideal for hydraulic oil and have a stainless steel needle. ***Type 303 stainless steel*** valves are ideal for hydraulic oil and water and have a stainless steel needle.

Single-direction flow control valves provide controlled flow in one direction; a built-in check valve allows free flow in the other direction.

				NPTF (DRYSEAL)						***BSPT***

★ Has a T-handle knob and is made of Type 316 stainless steel.

Easy-Set Needle Valves

Dual-Direction Flow Control

- Max. Pressure for Water, Oil, and Inert Gas: Brass: 2000 psi @ 400° F; Steel: 5000 psi @ 400° F
- Temp. Range: –15° to +400° F

Single-Direction Flow Control

- Max. Pressure for Water, Oil, and Inert Gas: Brass: 2000 psi @ 190° F; Steel and Type 303 Stainless Steel: 5000 psi @ 190° F
- Temp. Range: –15° to +200° F

Handle threads are color-coded, providing a visual reference point for repeated settings (one full turn per color). Seal is fluoroelastomer and seat is metal-to-metal. Connections are NPTF (Dryseal) female.

Brass valves are ideal for water and have a brass needle. ***Steel*** valves are ideal for hydraulic oil and have a stainless steel needle. ***Type 303 stainless steel*** valves are ideal for hydraulic oil and water and have a stainless steel needle.

Single-direction flow control valves provide controlled flow in one direction; a built-in check valve allows free flow in the other direction.

■ Body is bronze. ♦ Body is ductile iron.

For information about pipe size, see pages 2-3.

Medium-Pressure Needle Valves

- Max. Pressure for Water, Oil, and Inert Gas: 6000 psi @ 200° F
- Temp. Range: –10° to +200° F

All valves have fluoroelastomer and PTFE packing and a Type 316 stainless steel needle. Connections are NPT.

Brass valves are ideal for water. ***Nickel-plated steel*** valves are corrosion-resistant and are ideal for hydraulic oil. ***Type 316 stainless steel*** valves are highly polished and provide superior corrosion resistance. Ideal for water and hydraulic oil.

Metal-to-metal seat valves are resistant to temperature fluctuation. ***Bubble-tight shutoff soft seat*** valves provide a tighter seal than metal-to-metal when the valve is completely closed.

Brass

Nickel-Plated Steel and Type 316 Stainless Steel

High-Pressure Needle Valves

- Max. Pressure for Water, Oil, and Inert Gas: 10,000 psi @ 100° F
- Temp. Range: –50° to +1000° F

Made of bar stock, a one-piece body ensures high-pressure performance up to 10,000 psi. All valves have a metal-to-metal seat. Connections are NPT female.

Steel valves are ideal for hydraulic oil and have a Type 316 stainless steel needle. ***Type 316 stainless steel*** valves are more corrosion resistant than steel and are ideal for hydraulic oil and water. They have a Type 316 stainless steel needle.

Panel-mount valves come with a mounting nut. They require an 11/16″ diameter panel cutout.

Extreme-Pressure Type 316 Stainless Steel Needle Valves

- Max. Pressure for Water, Oil, and Inert Gas: 15,000 psi @ 72° F
- Temp. Range: –100° to +450° F

Heavy duty stainless steel construction provides the strength to stand up to your highest pressure applications. Valves have a metal-to-metal seat, glass-filled PTFE packing, and a 17-4 PH stainless steel needle. Connections are NPT female.

Pipe Size	End-to-End Lg.	Cv Factor	Orifice Dia.		Each
1/4″	2 1/2″	0.73	0.250″	4617K15	$107.63

1/2″	2 1/2″	1.75	0.250″	4617K19	143.03

Type 316 Stainless Steel Needle Valves with Yor-Lok Tube Fittings

- Max. Pressure for Water, Oil, and Inert Gas: Standard: 5000 psi @ 200° F; High Temperature: 6000 psi @ 100° F
- Temp. Range: Standard: –51° to +446° F; High Temperature: –65° to +700° F

The Yor-Lok connections on these valves have a double-ferrule design to provide a leak-free seal. They are interchangeable with Swagelok®, Parker A-Lok, Gyrolok, Bilok, Tylok, and Let-Lok tube fitting connections.

Standard— Has PTFE packing. Needle is Type 316 stainless steel.

High Temperature— Has flexible graphite packing for higher temperature applications than standard. Needle is Type 630 stainless steel.

For Tube OD	End-to-End Lg.	Cv Factor	Orifice Dia.		Each
Standard					
1/8″	2″	0.09	0.080″	45585K85	$83.05

Ultra-Precision Needle Valves

- Max. Pressure for Water, Oil, and Inert Gas: Brass: 3000 psi @ 450° F; Type 303 Stainless Steel: 5000 psi @ 450° F
- Temp. Range: –65° to +450° F

Ensure highly accurate flow adjustment. While ordinary valves open with 10 turns or less, these valves open with 20 turns, giving you more precise flow control. All have a metal-to-metal seat, PTFE packing, and a Type 303 stainless steel needle. Connections are NPT female.

Brass valves are ideal for use with water.

Type 303 stainless steel valves provide better corrosion resistance than brass. Ideal for use with hydraulic oil and water.

Pipe Size	End-to-End Lg.	Cv Factor	Orifice Dia.	Brass	Each	Type 303 Stainless Steel	Each
1/8″	1 3/8″	0.02	0.031″	7832K21	$86.67	7836K25	$143.72

High-Temperature Type 316 Stainless Steel Needle Valves

- Max. Pressure for Water, Oil, and Inert Gas: 6000 psi @ 100° F
- Temp. Range: –65° to +700° F

Flexible graphite packing extends service life and allows for high-temperature use. Body is Type 316 stainless steel for superior corrosion resistance. All have a metal-to-metal seat and a Type 630 stainless steel needle.

NPT— Attach to pipe.

Socket Weld (Unthreaded)— Attach to stainless steel tubing.

Dual Needle Valve Type 316 Stainless Steel Manifolds

- Max. Pressure for Water, Oil, and Inert Gas: 10,000 psi @ 266° F
- Temp. Range: –4° to +446° F

Two needle valves with two vent ports and plugs allow you to isolate your pressure gauge or pressure transducer for maintenance, calibration, replacing components, or sampling without interrupting the process. Also known as block and bleed valves, these have a Type 316 stainless steel body, metal-to-metal seats, fiberglass-filled PTFE packing, and 17/4 PH stainless steel needles. Connections are NPT female.

Pipe Size	End-to-End Lg.	Cv Factor	Orifice Dia.		Each

High-Flow Steam-Rated Bronze Needle Valves

Inline *Elbow*

- Max. Pressure for Water, Oil, and Inert Gas: 400 psi @ 150° F
- Temp. Range: –20° to +450° F

Valves meet MSS-SP-80, provide high flow, and are rated for steam up to 200 psi at 450° F. They have a bronze globe-style body, a metal-to-metal seat, and a silicon aluminum bronze needle. All valves have graphite packing, except 1″ pipe size, which has Kevlar fiber packing. Connections are NPT female.

Miniature Elbow Needle Valves

- Max. Pressure for Water, Oil, and Inert Gas: Barb: 180 psi @ 150° F; Threaded: 300 psi @ 70° F
- Temp. Range: Barb: –40° to +200° F; Threaded: –4° to +430° F

Just what you need for compressed air flow-control applications. Use with soft tubing. All valves have a metal-to-metal seat. *Note:* Cv factor is not rated for barb valves and is 0.024 for UNF male×female valves.

Nickel-plated brass valves have a nickel-plated brass needle and a Buna-N seal. They require a 5/16″ diameter panel cutout.

Type 303 and ***Type 316 stainless steel*** valves have a Type 316 stainless steel needle and fluoroelastomer packing. Type 316 stainless steel is more corrosion resistant than Type 303 stainless steel.

Panel-Mount Brass Needle Valves

Inline, Female × Female *Elbow, Male × Female*

- Max. Pressure for Water, Oil, and Inert Gas: 500 psi @ 180° F
- Temp. Range: –20° to +180° F

Valves are brass and include a nut for panel mounting. All have a metal-to-metal seat. *Note:* Cv factor is not rated.

Inline valves have PTFE packing and a Kel-F soft-tip needle for bubble-tight shutoff, providing a leak-free seal. ***Elbow*** valves with 1/8″ pipe size have a Buna-N seal. Valves with 1/4″ pipe size have PTFE packing and a Kel-F soft-tip needle for bubble-tight shutoff, providing a leak-free seal.

Brass Needle Valves with Compression Tube Fittings

- Max. Pressure for Water, Oil, and Inert Gas: 150 psi @ 70° F
- Temp. Range: –45° to +250° F

Prevent your tubing from collapsing. These brass valves have compression connections with Type 316 stainless steel tube supports. A brass nut and acetal sleeve on the fittings protect your tubing. Valves have a metal-to-metal seat, neoprene packing, and a brass needle. *Note:* Cv factor is not rated.

High-Pressure Steel Elbow Needle Valves

Female × Female

- Max. Pressure for Water, Oil, and Inert Gas: 10,000 psi @ 100° F
- Temp. Range: –20° to +500° F

Take on high temperatures and high-pressure applications up to 10,000 psi. Valves are engineered from thick AISI 1213 alloy steel with an integral metal-to-metal seat design. All have PTFE packing and a Type 416 stainless steel needle. Connections are NPT.

Mounting nuts are Type 303 stainless steel.

Brass Elbow Needle Valves

Low Flow
- Max. Pressure for Water, Oil, and Inert Gas: 150 psi @ 250° F
- Temp. Range: –45° to +250° F

High Flow
- Max. Pressure for Water, Oil, and Inert Gas: 200 psi @ 70° F
- Temp. Range: –20° to +250° F

Also known as truck valves, these are for draining or shutting off process lines. Body and needle are brass. Seat is metal-to-metal.

Low-flow valves have a neoprene seal that is ideal for water lines. *Note:* Cv factor is not rated.

High-flow valves have a fluoroelastomer seal (unless noted). They are ideal for use with gasoline, diesel fuel, and kerosene.

Compact Plastic Needle Valves

- Max. Pressure: 125 psi @ 140° F
- Temp. Range: 33° to 140° F

Our corrosion- and water-resistant plastic valves are small enough to fit in tight areas. Seal is EPDM rubber, which makes them ideal for use with water. *Note:* Cv factor is not rated.

PVC valves have a PVC seat and are gray. ***Polypropylene*** valves have a polypropylene seat and are white.

Valves can be panel mounted and include a nylon nut. They require a 7/8″ diameter hole for panel mounting. ***Optional panel-mounting nuts*** are nickel-plated brass.

Plastic Needle Valves

- Max. Pressure: 150 psi @ 70° F
- Temp. Range:
  PVC: 40° to 150° F;
  Polypropylene: 40° to 260° F

The plastic body with fluoroelastomer seal provides chemical resistance at a light weight. Valves are ideal for use with water. They require a 15/16″ diameter hole for panel mounting. All have PTFE seats. Connections are NPT female.

PVC valves have a PVC needle and are dark gray. ***Polypropylene*** valves have a polypropylene needle and are black.

Pipe Size	End-to-End Lg.	Cv Factor	Orifice Dia.	*PVC*	Each	*Polypropylene*	Each

Easy-Set Polyester Needle Valves

- Max. Pressure: 200 psi @ 200° F
- Temp. Range: 0° to 200° F

Handle threads are color coded and visible through a slot in the handle, a providing visual reference point for repeated settings (one full turn per color). A ring lock prevents accidental adjustments. Body is glass-reinforced polyester; needle is zinc-plated steel; seals are Buna-N for oil resistance; and seat is polyester. Color is black. Connections are NPTF (Dryseal) female.

Single-Direction Flow Control with Check Valve— Safely provide controlled flow in one direction; a built-in check valve allows free flow in the opposite direction.

Optional panel-mounting nuts are composite plastic. *1/8″ and 1/4″ sizes* require a 1″ diameter panel cutout; *3/8″ to 3/4″ sizes* require a 1 3/8″ diameter panel cutout.

Stop-and-Drain Brass Faucets

- Max. Pressure for Water: 125 psi @ 100° F
- Temp. Range: 40° to 180° F

Prevent freezing in sprinkler systems. A capped side port can be opened to drain water when the faucet is closed. Made of brass. CSA certified.

Pipe Size	End-to-End Lg.		Each
1/2″	2 3/16″	4792K71	$15.11

High-Temperature Brass Faucets

- Max. Pressure for Water: 200 psi @ 240° F
- Max. Pressure for Steam: 150 psi @ 366° F
- Temp. Range: 33° to 366° F

Also known as radiator supply valves, these control the flow of high-temperature steam or water. Body is brass. Inlet connection is NPT female; outlet connection is male union.

Pipe Size	End-to-End Lg.		Each
1/2″	3 3/4″	1812K25	$78.25
3/4″	4 1/4″	1812K26	84.36

Frostproof Outdoor Faucets with Garden Hose Outlet

- Max. Pressure for Water: Through-Wall: 85 psi @ 140° F; Tamper-Resistant Through-Wall and In-Ground: 125 psi @ 140° F
- Temp. Range: Through-Wall and Tamper-Resistant Through-Wall: +35° to +140° F; In-Ground: −40° to +140° F

Also known as frostproof water hydrants, these faucets drain when closed to prevent freezing.

Through-Wall—Body is brass. Inlet is dual-threaded 1/2″ NPT female×3/4″ NPT male. Outlet is 3/4″ garden hose thread (GHT) male.

Tamper-Resistant Through-Wall—To prevent tampering, these faucets require a key to open and close. Body is chrome-plated brass; pipe is brass. Inlet is dual-threaded 1″ NPT male×3/4″ NPT female. Outlet is 3/4″ garden hose thread (GHT) male.

In-Ground—Body is cast iron; in-ground pipe is stainless steel with a galvanized steel casing. Inlet is 3/4″ NPT female. Outlet is 3/4″ garden hose thread (GHT) male.

Drain-Handle Brass Stop Cocks

- Max. Pressure for Water, Oil, and Inert Gas (unless otherwise stated): 150 psi @ 250° F
- Temp. Range: See table

Install on your tank for easy draining. Body is brass. ***Wing-nut-handle*** stop cocks are for use with water and oil only. ***Thumb-screw-handle*** and ***cable-pull*** stop cocks are for use with compressed air only (250 psi at 250° F). ***Removable handle*** stop cocks can be disassembled for cleaning. ***Cable-pull*** stop cock has a 5-ft. cable for opening and closing.

External seal stop cocks are for higher flow applications. Inlet connection is NPT male. Outlet connection is vented to atmosphere, unless noted.

Easy-Grip Brass Stop Cocks

- Max. Pressure for Water, Oil, and Inert Gas: 200 psi @ 150° F
- Temp. Range: 32° to 150° F

The large knob is easy to grip for drain applications. Ideal as replacement stop cocks in liquid-level compression gauges. Body is brass. Connections are NPT male.

Pipe Size	Port-to-Port Lg. (P)		Each
1/2″	7/8″	4801K6	$53.28
3/4″	1″	4801K7	58.22

Chemical-Resistant Plastic Stop Cocks

- Max. Pressure:
  Polyethylene: 7 psi @ 176° F
  Polypropylene: Not rated
  PVC: 15 psi @ 73° F
- Temp. Range:
  Polyethylene: 40° to 176° F
  Polypropylene: 32° to 275° F
  PVC: 32° to 120° F

Barb×Barb

For low-pressure liquid uses, these stop cocks have a thermoplastic body for chemical resistance. ***Polyethylene*** stop cocks are white. ***Polypropylene*** stop cock has a TFE elastomer seal. Color is white. ***PVC*** stop cocks have an EPDM seal. Color is black.

Multiconnection PVC Stop Cock

- Max. Pressure for Water and Oil: 150 psi @ 70° F
- Temp. Range: 40° to 140° F

Get six connection combinations in one. Stop cock is PVC. It has two 1/4″ NPT female connections and includes two 1/4″ NPT male adapters and two barb adapters for 1/4″ to 7/16″ ID tube. Seal is EPDM. End-to-end length is 2 1/8″ without adapters.

46975K31 ..... **Each** $20.20

Toggle & Pinch Valves

For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″

Panel-Mount Brass Toggle Valves

Miniature Elbow Style — *Compact Inline Style*

- Max. Pressure for Water, Oil, and Inert Gas: Miniature: 150 psi @ 70° F; Compact: 200 psi @ 70° F
- Temp. Range: Miniature: +32° to +230° F; Compact: –40° to +250° F

Easily switch from open to closed. Ideal for use in test equipment as well as gas sampling and analysis systems. Body is brass with a metal toggle, unless noted. All include a nut for panel mounting.

Miniature valves have a Buna-N seal. Panel mount in a 15/32″ diameter cutout. ***Compact*** valves have a fluoroelastomer seal. Panel mount in a 9/16″ diameter cutout.

Manual-return valves remain open or closed when the toggle is moved into position. *Spring-return* valves open when the toggle is moved, and snap closed when the toggle is released (normally closed).

★ Has a plastic toggle.

Diverting Aluminum Toggle Valves

- Max. Pressure for Water and Oil: 250 psi @ 70° F
- Temp. Range: –30° to +230° F

Direct flow from either side port to the bottom port or from the bottom port to either side port. Valves have a spring-return toggle control that opens when the toggle is moved to either position and snaps closed when the toggle is released to the middle position (normally closed). Seal is Buna-N. Valves come with a nut for panel mounting. Connections are NPT female.

Toggle Valves

Inline — *Elbow*

- Max. Pressure for Water, Oil, and Inert Gas: 300 psi @ 200° F
- Temp. Range: –20° to +200° F

Get a leak-free seal when you connect to your metal tubing. Valves have manual-return toggle control—the toggle remains open or closed when it is moved into position. Seals are PTFE and fluoroelastomer. Furnished with a nut for panel mounting in a 17/32″ diameter cutout. Valves for tubing have Yor-Lok compression fittings that are compatible with Swagelok™, Parker A-Lok, Bilok, and Tylok.

Brass Saddle Valves for Tubing

Saddle Valve — *Self-Piercing Saddle Valve*

- Max. Pressure for Water, Oil, and Inert Gas: 150 psi @ 250° F
- Temp. Range: –30° to +250° F

Also known as humidifier valve clamps, these valves allow you to tap into an existing water line for another use. They clamp onto tubing and pipe with 0.375″ to 1.315″ OD. Outlet connection is a 1/4″ compression tube fitting.

Saddle Valve— For iron, copper, and brass tubing and pipe. Requires a 1/4″ dia. drilled hole.

Self-Piercing Saddle Valve— For copper tubing.

		Each
Saddle Valve	4863K15	$12.46
Self-Piercing Saddle Valve	4863K11	9.80

Clamp-Style Pinch Valves for Tubing

With Flow-Control Positions

Eliminate contamination of fluids. These valves reduce or stop flow by pinching the outside of your tubing and never come in contact with the contents. Not rated for maximum pressure.

For information about pipe size, see pages 2-3.

Air Fill Valves

- Use with air
- Max. Pressure: 200 psi
- Temp. Range: –40° to +225° F

Also known as Schrader valves, use these to rapidly fill or empty compressed air tanks. They have 0.305″-32 straight threads for connection to your air supply. All connections are male. Valves come with a cap.

Style 2 is nickel-plated brass for greater corrosion resistance than plain brass.

Squeeze-Grip Zinc Alloy Valves

- Use with air and water
- Max. Pressure: 150 psi
- Temp. Range: –40° to +200° F

Put flow control in the palm of your hand. For applications that require intermittent operation such as blow guns, press down on the lever to start flow. Valve closes upon release to stop flow. Body is zinc alloy and seal is Buna-N. Port-to-port length is 2 1/8″. Connections are 1/4 NPT female.

6852K11 ..... $11.67

Safety-Lockout Aluminum Air Valves

- Use with air
- Max. Pressure: See table
- Temp. Range: 40° to 175° F

Comply with OSHA regulation 29 CFR Part 1910 for lockout/tagout procedures. The valve handle can be locked in the shut-off position using a padlock (not included) with a shackle diameter of 9/32″. Body is aluminum and seals are PTFE. Handle is plastic. Inlet, outlet, and exhaust connections are NPT female.

Valves with muffler come with a muffler in the exhaust port to reduce the noise level.

Brass Shuttle Valves

- Use with air, oil, and water
- Max. Pressure: 250 psi
- Temp. Range: 32° to 230° F

Direct flow between one of two side inlets and the center outlet. Valves switch automatically between inlets based on pressure. Flow is directed from the higher-pressure inlet to the outlet, while flow from the lower-pressure inlet is off.

Body is brass and seal is Buna-N. Mount inline or directly to valves or cylinders.

Connection Size	Inlets	Outlet	Lg.		
With Straight-Thread Connections

Sliding-Sleeve Brass Air Valves

- Use with air
- Max. Pressure: 232 psi
- Temp. Range: 14° to 176° F

Slide the knurled sleeve in one direction to stop flow, and slide it back to start flow again. Body is nickel-plated brass, seal is Buna-N, and sliding sleeve is aluminum. Valves vent air to the atmosphere when closed. Connections are NPT.

Brass Push-Button Valves

- Use with water, hydraulic oil, inert gas, LP gas, and natural gas
- Max. Pressure: See table
- Temp. Range: 32° to 230° F

Open or close these valves with the push of a button. Body is brass and seal is Buna-N. Connections are female.

Normally closed valves open when the button is pushed and spring closed when the button is released.

Normally open valves close when the button is pushed and spring open when the button is released.

Safety Auto-Shutoff Brass Air Valves

- Use with air
- Max. Pressure: 250 psi
- Temp. Range: 0° to 180° F

Also known as air fuses, valves close automatically to stop air flow when pressure exceeds the set closing flow rate (see table). They reopen when pressure drops below the closing flow rate. Body is brass. Seal is acetal, except 5000K88, which is brass. Connections are NPTF (Dryseal) female.

About Solenoid Valves

Solenoid valves provide flow control for your automated applications. They require electricity for operation. To keep foreign particles from affecting the performance of your valve, we recommend installing an inline strainer before the solenoid valve in your system. For inline strainers, see pages 373-377.

Some high-flow and medium-flow solenoid valves require a ***pressure drop across the valve*** for operation; your upstream pressure must be greater than your downstream pressure. If you're not sure about your pressure drop, select a valve with "none required."

Use the chart below to choose the valve that fits your application.

	Pipe Size	Max. Pressure	Pressure Drop Across Valve	Amp Draw	Also Known As	Pages
High Flow	3/8-2	Low	None to 20 psi Required	Very Low	Diaphragm Pilot Operated	466-469
Medium Flow	1/4-2	Medium	None to 20 psi Required	Low	Piston Pilot Operated	470-471
Low Flow	1/8-1	High	None Required	Medium	Direct Acting	472-475

High-Flow Solenoid Valves

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	1/2"	5/8"	3/4"	1"	1 3/8"	1 5/8"	1 7/8"	2 3/8"
Pipe Size	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

Premium Brass Solenoid Valves

- Use with air, water, and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range:
  VAC Valves: 32° to 180° F
  VDC Valves: 32° to 150° F

Built for a long service life, these valves have a solenoid housed in a NEMA 4X enclosure (indoor/outdoor; washdown/corrosion resistant). They're interchangeable with Parker Hannifin Gold Ring 23C series and Asco Red Hat 8210G series.

Connections are NPT female. Body is brass and diaphragm is Buna-N. Valves are closed unless energized (normally closed). They have wire leads, a 1/2" conduit port, and draw a max. of 0.84 amps. Mount in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Brass Solenoid Valves

The standard choice for automated flow control—no pressure drop is required for operation. Commonly used with heat exchangers, recirculating lines, and automated equipment, and to control flow to tanks and nozzles. Connections are NPT female. Body is brass.

For Air, Water, and Oil—Buna-N Diaphragm

- Use with air, water, oil, inert gas, and ethylene glycol
- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 195° F

Valves have a DIN electrical connection with a 1/2" conduit port and draw a max. of 1.12 amps. Enclosure is NEMA 4 (indoor/outdoor; washdown resistant). Mount in any position.

♣ Max. pressure is 85 psi.

For Degreasing Fluid and Ethylene Glycol—Fluoroelastomer Diaphragm

- Use with degreasing fluid, ethylene glycol, and inert gas; also for oil (unless not rated)
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 230° F

Valves have wire leads, a 1/2" conduit port, and draw a max. of 1.12 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount in any position. UL listed.

For Steam—EPDM Diaphragm

- Use with steam and hot water
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 300° F

Valves have wire leads, a 1/2" conduit port, and draw a max. of 0.19 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount valves in horizontal pipe with the solenoid on top.

3/4	2 15/16"	4 1/8"	50	150	47905K74	164.82

For information about solenoid valves, see page 466. For information about pipe size, see pages 2-3.

Premium Energy-Efficient Brass Solenoid Valves

- Use with air, water, oil, and inert gas
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: VAC Valves: 32° to 180°F; VDC Valves: 32° to 150°F

These top-of-the-line valves combine energy efficiency with a NEMA 4X enclosure (indoor/outdoor; washdown/corrosion resistant) for a long service life. Operation is assisted by the pressure in your pipeline, which reduces the electricity required. They're interchangeable with Parker Hannifin Gold Ring 22C and 24C series and Asco Red Hat 8210G series.

Connections are NPT female. Body is brass and diaphragm is Buna-N. Valves are closed unless energized (normally closed). They have wire leads, a 1/2″ conduit port, and draw a max. of 0.84 amps. Mount in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Energy-Efficient Brass Solenoid Valves

Use less energy to control flow—operation is assisted by pressure in your pipeline. Connections are NPT female. Body is brass.

For Air, Water, and Oil—Buna-N Diaphragm

- Use with air, water, oil, and ethylene glycol
- Pressure Drop Across Valve: At least 7 psi required
- Temp. Range: 14° to 195°F

Valves have a DIN electrical connection and draw a max. of 0.60 amps. Mount in any position. *Style A* have an IP65 (resists splashing water) enclosure. *Style B* have a NEMA 4 (indoor/outdoor; washdown resistant) enclosure.

For Cutting Oil and Ethylene Glycol—Fluoroelastomer Diaphragm

- Use with cutting oil, ethylene glycol, water, and hydraulic oil
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: 32° to 230°F

Valves have wire leads, a 1/2″ conduit port, and draw a max. of 0.55 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount in any position. UL listed and CSA certified.

For Hot Water and Inert Gas—PTFE Diaphragm

- Use with hot water, inert gas, and oil
- Pressure Drop Across Valve: At least 1 psi required
- Temp. Range: 32° to 180°F

Valves have wire leads, a 1/2″ conduit port, and draw a max. of 0.16 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount in any position. *3/8* and *3/4 pipe size* are UL listed.

Anti Water-Hammer Brass Solenoid Valves

- Use with water
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: 32° to 185°F

Minimize rattle and bang in your pipeline. Connections are NPT female. Body is brass and diaphragm is Buna-N. Valves are closed unless energized (normally closed). They have wire leads, a 1/2″ conduit port, and draw a max. of 0.15 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount valves in horizontal pipe with the solenoid on top. UL and C-UL listed.

Pipe Size	Lg.	Ht.	Max. psi	120 VAC

Brass Solenoid Valves for Fuel

- Use with diesel fuel and heavy fuel oil (#6)
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: For Diesel Fuel: 15° to 176°F For Heavy Fuel Oil (#6): 158° to 240°F

Use one of these UL listed safety valves for flow control in heating and power systems. Connections are NPT female. Body is brass and diaphragm is fluoroelastomer. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.25 amps. Enclosure is NEMA 2 (indoor only; resists light splashing). Mount valves in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi Diesel Fuel	Max. psi Heavy Fuel Oil (#6)

Brass Solenoid Valves with Adjustable Flow Control

- Use with water, chlorinated water, ethylene glycol, and soap solutions
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: 32° to 150°F

Commonly used in landscaping, just turn the handle to adjust flow. Connections are NPT female. Body is brass and diaphragm is EPDM. Valves are closed unless energized (normally closed). They have wire leads, a 1/2″ conduit port, and draw a max. of 0.83 amps. Mount in any position.

Directional Control 3-Port Brass Solenoid Valves

A

B

- Use with air, water, inert gas, oil, and hydraulic oil
- Pressure Drop Across Valve: At least 10 psi required
- Temp. Range: 32° to 180°F

Operate your actuated equipment—the 3-port body switches the direction of flow to apply and exhaust pressure. Also known as 3-way valves, they are commonly used with single-acting spring-return cylinders.

Connections are NPT female. Body is brass and diaphragm is Buna-N. Valves have wire leads, a 1/2″ conduit port, and draw a max. of 0.71 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount in any position.

Normally closed valves exhaust unless energized; *normally open* pressurize unless energized.

Brass Solenoid Valves for Steam

- Use with steam
- Pressure Drop Across Valve: At least 1 psi required (unless noted)
- Temp. Range: 32° to 353°F (unless noted)

Designed to stand the high temperatures of steam applications. Connections are NPT female. Body is brass and diaphragm is PTFE (unless noted). Valves have wire leads, a 1/2″ conduit port, and draw a max. of 0.83 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount valves in horizontal pipe with the coil on top. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi	120 VAC	24 VAC	
Closed Unless Energized (Normally Closed)

★ Diaphragm is EPDM. Temp. range is 32° to 300°F.
▲ A pressure drop of at least 10 psi is required for operation.

Brass Solenoid Valves with Easy-Access Strainer

- Use with air, water, inert gas, oil, hydraulic oil, ethylene glycol, and soap solutions
- Pressure Drop Across Valve: At least 3 psi required
- Temp. Range: 32° to 180°F

An integral 60-mesh strainer keeps your liquids particle free and your valve working efficiently. The easy-access clean-out port lets you remove debris without disconnecting your pipeline.

Connections are NPT female. Body is brass and diaphragm is EPDM. Valves are closed unless energized (normally closed). They have a 1/4″ quick-disconnect electrical connection and draw a max. of 0.48 amps. Enclosure is NEMA 1 (indoor only).

Dimensions are 2 7/16″ Lg. × 4″ Ht. Mount valves in horizontal pipe with the solenoid on top.

Pipe Size	Max. psi	120 VAC	240 VAC	24 VAC	24 VDC	
1/4	125	4590K13	4590K16	4590K15	4590K14	$46.90

Nickel-Plated Brass Solenoid Valves

- Use with water, inert gas, oil, benzene, ethylene glycol, and mineral spirits
- Pressure Drop Across Valve: At least 2 psi required
- Temp. Range: 14° to 280°F

Nickel plating provides greater corrosion resistance than plain brass. Connections are NPT female. Body is nickel-plated brass and diaphragm is fluoroelastomer. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have a DIN electrical connection and draw a max. of 0.33 amps. Enclosure is NEMA 4 (indoor/outdoor; washdown resistant). Mount in any position.

Pipe Size	Lg.	Ht.	115 VAC Max. psi	115 VAC	24 VDC Max. psi	24 VDC

For information about solenoid valves, see page 466. For information about pipe size, see pages 2-3.

Corrosion-Resistant Stainless Steel Solenoid Valves

A stainless steel body provides exceptional corrosion resistance in your harsh environment. Connections are NPT female. Valves are closed unless energized (normally closed). They operate on 120 VAC and draw a max. of 0.16 amps.

(A) For Air, Water, and Oil—Buna-N Diaphragm

- Use with air, water, inert gas, and oil
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: 32° to 180°F

Body is Type 316 stainless steel. Valves have wire leads and a 1/2″ conduit port; enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount in any position. UL listed.

Pipe Size	Lg.	Ht.	Max. psi		
3/8	2 13/16″	4 1/8″	150	48025K711	$317.73
1/2	2 13/16″	4 1/8″	150	48025K721	524.53
3/4	2 15/16″	4 3/8″	150	48025K741	535.50
1	3 3/4″	6 3/8″	100	48025K731	898.62

(B) For Ethylene Glycol—Fluoroelastomer Diaphragm

- Use with ethylene glycol, 70% sodium hydroxide, air, water, inert gas, and oil
- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 302°F

Body is Type 316 stainless steel. Valves have wire leads and a 1/2″ conduit port; enclosure is NEMA 2 (indoor only; resists light splashing). Mount in any position. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi		
3/8	2 3/4″	4 3/8″	150	47795K11	$265.20
1/2	2 3/4″	4 3/8″	150	47795K12	276.73
3/4	2 3/4″	4 3/8″	150	47795K13	302.18
1	3 3/8″	5 3/8″	150	47795K14	378.33

(C) For Steam—PTFE Diaphragm

- Use with steam and hot water
- Pressure Drop Across Valve: At least 10 psi required
- Temp. Range: 32° to 366°F

Body is Type 316 stainless steel. Valves have wire leads and a 1/2″ conduit port; enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi		
1 1/4	6 5/16″	5 7/8″	150	49225K77	$444.30
1 1/2	6 5/16″	5 7/8″	150	49225K78	465.27
2	6 5/16″	6 5/8″	150	49225K79	672.07

(D) For Drinking Water—EPDM Diaphragm

- Use with drinking (potable) water
- Pressure Drop Across Valve: At least 3 psi required
- Temp. Range: 32° to 180°F

Valves are NSF 61 certified for use with drinking (potable) water. Body is Type 303 stainless steel. Valves have a 1/4″ quick-disconnect electrical connection and a NEMA 1 (indoor only) enclosure. Mount in horizontal pipe with the solenoid on top.

Pipe Size	Lg.	Ht.	Max. psi		
3/8	1 7/8″	3″	125	4530T11	$108.24
1/2	1 7/8″	3″	125	4530T12	111.62

Directional Control 4-Port Aluminum Solenoid Valves

- Use with air and inert gas
- Pressure Drop Across Valve: At least 20 psi required
- Temp. Range: 120 VAC: 0° to 135°F
  24 VDC: 0° to 77°F

Control your actuated equipment—a 4-port body switches the direction of flow to apply and exhaust pressure. Also known as 4-way valves, they're often used with double-acting (push/pull) cylinders. Connections are NPT female. Body is aluminum and seals are Buna-N. Valves have wire leads and draw a max. of 0.29 amps. Mount in any position. CSA certified.

Pipe Size	Lg.	Ht.	Max. psi	120 VAC	24 VDC	
1/4	1 1/2″	4 1/4″	150	4368T44	4368T48	$306.64

Nylon Solenoid Valves with Adjustable Flow Control

- Use with water
- Pressure Drop Across Valve: At least 10 psi required
- Temp. Range: 35° to 150°F

Body is glass-filled nylon for a lightweight valve that stands up to UV light. Often used in landscaping, adjust flow by turning the handle. Connections are NPT female. Diaphragm is EPDM. Valves have wire leads, a 1/2″ conduit port, and draw a max. of 0.3 amps. Mount in any position.

Pipe Size	Lg.	Ht.	Max. psi	110 VAC	24 VAC	
Closed Unless Energized (Normally Closed)

Chemical-Resistant PVC and CPVC Solenoid Valves

- Use with caustic chemicals, water, and oil
- Pressure Drop Across Valve: None required
- Temp. Range: PVC: 34° to 140°F
  CPVC: 34° to 190°F

Get good chemical resistance at a lighter weight than metal options. Valves come with a set of NPT female and socket weld (unthreaded) union fittings for each pipe connection. Diaphragm is fluoroelastomer. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have a DIN electrical connection with a 1/2″ conduit port and draw a max. of 0.16 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount in any position. CSA certified.

Medium-Flow Solenoid Valves

For information about solenoid valves, see page 466. For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

Bronze Solenoid Valves

Harder, stronger, and more corrosion resistant than brass valves, no pressure drop is required for operation. Connections are NPT female. Body and piston are bronze. Valves operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 2 amps. Mount in horizontal pipe with the solenoid on top.

For Air, Water, and Oil—Buna-N Seal

- Use with air, water, inert gas, and oil
- Pressure Drop Across Valve: None required
- Temp. Range: –40° to +212° F

Energy-Efficient Bronze Solenoid Valves

The strength of bronze is paired with low energy consumption—valve operation is assisted by the pressure in your pipeline, which reduces the electricity required.

Connections are NPT female. Body is bronze and piston is brass. Valves have wire leads, a 1/2″ conduit port, and draw a max. of 1 amp. Enclosure is NEMA 1 (indoor only). Mount valves in horizontal pipe with the solenoid on top.

For Air, Water, and Oil—Buna-N Seal

- Use with air, water, inert gas, oil, ethylene glycol, and soap solutions
- Pressure Drop Across Valve: At least 10 psi required
- Temp. Range: –40° to +220° F

High-Use Brass Solenoid Valves

- Use with air, water, inert gas, oil, ethylene glycol, and soap solutions
- Pressure Drop Across Valve: At least 3 psi required
- Temp. Range: 32° to 200° F

Designed to withstand the wear of applications involving frequent on/off flow control. Connections are NPT female. Body and piston are brass; seal is PTFE. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.24 amps. Mount in horizontal pipe with the solenoid on top. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi		
3/8	2 1/16″	3 3/4″	150	7862K38	$99.08
1/2	2 3/8″	3 7/8″	150	7862K42	109.00

1	3 1/2″	4 3/4″	150	7862K51	205.65

For information about solenoid valves, see page 466. For information about pipe size, see pages 2-3.

Cleaned and Bagged Cryogenic Brass Solenoid Valves

- Use with liquid argon, liquid nitrogen, and liquid oxygen
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: Style A: –320° to +122° F
  Style B: –321° to +356° F

Able to withstand the extreme cold of liquefied gas, valves are cleaned and bagged for high-purity applications. Connections are NPT female. Body is brass and seal is PTFE. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.23 amps. Mount in any position.

Style A have a Type 304 stainless steel piston and a NEMA 4X (indoor/outdoor; washdown/corrosion resistant) enclosure.

Style B have greater flow than Style A of the same pipe size. Piston is brass and enclosure is NEMA 2 (indoor only; resists light splashing).

	Pipe Size	Lg.	Ht.	Max. psi		
A	1/4	2 1/16″	4 1/2″	225	7902K41	$217.35
A	3/8	2 1/16″	4 1/2″	225	7902K42	217.35

B	1/2	2 1/2″	4 7/8″	125	50585K39	308.11

Washdown Energy-Efficient Bronze Solenoid Valves

Equipped with a NEMA 4X enclosure and a corrosion-resistant bronze body to endure splashing water and washdown conditions. Also energy-efficient, valve operation is assisted by the pressure in your pipeline, which reduces the electricity required.

Connections are NPT female. Piston is brass. Valves are closed unless energized (normally closed). They have wire leads, a 1/2″ conduit port, and draw a max. of 1 amp. Mount in horizontal pipe with the solenoid on top.

For Air, Inert Gas, Water, and Oil—Buna-N Seal

- Use with air, inert gas, water, oil, ethylene glycol, alcohol, borax, and soap solutions
- Pressure Drop Across Valve: At least 10 psi required
- Temp. Range: –40° to +220° F

120/240 VAC valves are CSA certified for air and water and UL listed.

Pipe Size	Lg.	Ht.	Max. psi	*120/240 VAC*	*24 VDC*

★ Seal is EPDM. Temp. range is –40° to +298° F. Not CSA certified.

Hazardous-Location Bronze Solenoid Valves

- Use with air, water, inert gas, oil, and ethylene glycol
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: –40° to +220° F

Meet the challenges of your environment with an enclosure that's rated NEMA 7 (indoor only; meets Class I, Group D and Class II, Groups E, F, and G) for protection in hazardous locations.

Connections are NPT female. Body is bronze, piston is brass, and seal is Buna-N. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.32 amps. Mount in horizontal pipe with the solenoid on top. Valves are UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi		
1/2	2 3/4″	7″	150	4691K14	$227.27

2	5 7/8″	9 7/8″	150	4691K19	567.23

Stainless Steel Solenoid Valves

- Use with air, water, inert gas, oil, ammonia, and deionized water
- Pressure Drop Across Valve: None required
- Temp. Range: –320° to +400° F

High corrosion resistance is coupled with ease of use. Valves operate on electricity alone, so you don't have to measure the pressure drop in your pipeline.

Connections are NPT female. Body is Type 304 stainless steel, piston is Type 303 stainless steel, and seal is glass-filled PTFE. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.8 amps. Mount in horizontal pipe with the solenoid on top.

Pipe Size	Lg.	Ht.	Max. psi		
1/2	3 1/4″	7″	110	8117K35	$430.13
1/2	3 1/4″	7″	200	8117K36	469.87

3/4	3 1/2″	7 1/8″	110	8117K45	515.45
1	4 1/8″	8″	110	8117K55	593.77
1	4 1/8″	8 7/8″	200	8117K56	748.05

Extended-Life Stainless Steel Solenoid Valves

A Type 316 stainless steel body and Type 303 stainless steel piston make these the most corrosion resistant of our medium-flow solenoid valves, in addition to providing a long service life. They're also energy efficient; valve operation is assisted by the pressure in your pipeline, which reduces the electricity required.

Connections are NPT female. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.6 amps. Enclosure is NEMA 1 (indoor only). Mount valves in horizontal pipe with the solenoid on top.

For Air, Water, and Inert Gas—Buna-N Seal

- Use with air, water, inert gas, oil, and naphtha
- Pressure Drop Across Valve: At least 5 psi required
- Temp. Range: –40° to +300° F

Pipe Size	Lg.	Ht.	Max. psi		
1/2	3 1/8″	6 3/4″	150	4665K64	$448.57
3/4	3 3/4″	7 1/8″	150	4665K65	541.38
1	4 3/16″	7 1/2″	150	4665K66	650.70

For Ammonia and Ethylene Glycol—PTFE Seal

- Use with ammonia, ethylene glycol, and water
- Pressure Drop Across Valve: At least 20 psi required
- Temp. Range: –40° to +300° F

Pipe Size	Lg.	Ht.	Max. psi		
1/2	3 1/8″	6 3/4″	1,000	4665K24	$436.69
1	4 3/16″	7 1/2″	1,000	4665K26	673.96

Low-Flow Solenoid Valves

For information about solenoid valves, see page 466. For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8″	1/2″	5/8″
Pipe Size	1/8	1/4	3/8

Compact Brass Solenoid Valves

A

For automated applications in confined spaces. Connections are NPT female. Body is brass. Valves are closed unless energized (normally closed) and draw a max. of 1.08 amps. Mount in any position.

For Air and Water—Buna-N Seal

- Use with air, water, inert gas, oil, and ethylene glycol
- Pressure Drop Across Valve: None required
- Temp. Range: Style A: 0° to 195° F
  Style B: 32° to 120° F

Style A have a DIN electrical connection with a 1/2″ conduit port. Enclosure is NEMA 1 (indoor only).

Style B have wire leads and a 1/2″ conduit port. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). UL listed and CSA certified.

B

For Ethylene Glycol and Naphtha—Fluoroelastomer Seal

- Use with ethylene glycol, naphtha, air, water, inert gas, and oil
- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 195° F

Valves have a DIN electrical connection. Enclosure is IP65 (resists splashing water).

For Oil—Man-Made Ruby Seal

- Use with fuel oil and hydraulic oil
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 210° F

Valves have wire leads and a 1/2″ conduit port. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). UL listed and CSA certified.

Brass Solenoid Valves for LP and Natural Gas

- Use with LP gas and natural gas
- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 176° F

Equipped with a Buna-N seal, these UL listed safety valves are good for use in LP (liquefied petroleum) and natural gas service. They're also suitable for vacuum service. Connections are NPT female. Body is brass. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.16 amps. Enclosure is NEMA 2 (indoor only; resists light splashing). Mount valves in horizontal pipe with the solenoid on top. CSA certified.

Pipe Size	Lg.	Ht.	Max. psi		
1/8	1 3/4″	3 1/8″	10	47545K32	$117.98
1/4	1 3/4″	3 1/8″	10	47545K33	123.60
3/8	2 1/2″	3 1/2″	10	47545K34	155.50

Top-Connect Directional Control 3-Port Brass Solenoid Valves

- Use with air, water, inert gas, and oil
- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 176° F

Designed with the exhaust port on top to fit in narrow spaces, the 3-port body switches the direction of flow to apply and exhaust pressure to control your actuated equipment. Also known as 3-way valves, they're commonly used to operate cylinders and presses.

Connections are NPT female. Body is brass and seal is Buna-N. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.16 amps. Enclosure is NEMA 2 (indoor only; resists light splashing). Mount in any position. UL listed and CSA certified.

Pipe Size	Lg.	Ht.	Max. psi		
1/4	1 3/4″	3 5/8″	85	47835K251	$132.14
1/4	1 3/4″	3 5/8″	100	47835K231	134.77
1/4	1 3/4″	3 5/8″	155	47835K211	137.48

Cleaned and Bagged Cryogenic Compact Brass Solenoid Valves

- Use with liquid argon, liquid nitrogen, and liquid oxygen
- Pressure Drop Across Valve: None required
- Temp. Range: –321° to +356° F

Able to withstand media temperatures as low as –321° F, these little valves come cleaned and bagged for use with liquefied gas. Connections are NPT female. Body is brass and seal is PTFE. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.16 amps. Enclosure is NEMA 2 (indoor only; resists light splashing). Mount in any position.

Pipe Size	Lg.	Ht.	Max. psi		
1/8	1 3/4″	3 1/8″	300	50585K21	$206.00
1/4	1 3/4″	3 1/8″	120	50585K23	234.09

For information about solenoid valves, see page 466. For information about pipe size, see pages 2-3.

Compact Directional Control 3-Port Brass Solenoid Valves

Actuate automated equipment in tight spaces. Also known as 3-way valves, the 3-port body switches the direction of flow to apply and exhaust pressure. Commonly used with presses and single-acting spring-return cylinders.

Connections are NPT female. Body is brass. Valves exhaust unless energized (normally closed) and operate on 120 VAC. They have wire leads, a ½″ conduit port, and draw a max. of 0.26 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount in any position. Valves are UL listed and CSA certified.

For Air, Water, and Oil—Buna-N Seal

- Use with air, water, inert gas, and oil
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 180°F

Pipe Size	Lg.	Ht.	Max. psi		
⅛	1³⁄₁₆″	3⅛″	40	8111K311	$96.36
⅛	1³⁄₁₆″	3⅛″	100	8111K611	97.83
⅛	1³⁄₁₆″	3⅛″	200	8111K331	99.56

¼	2¹⁄₁₆″	3¾″	125	8111K652	119.90

For Ethylene Glycol—Fluoroelastomer Seal

- Use with ethylene glycol, air, water, inert gas, and oil
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 200°F

Pipe Size	Lg.	Ht.	Max. psi		
⅛	1³⁄₁₆″	3⅛″	200	8111K431	$106.66
¼	1⁹⁄₁₆″	3¾″	125	8111K441	120.63

Sure-Seal Stainless Steel Solenoid Valves

- Use with air, water, inert gas, hydraulic oil, and ethylene glycol
- Pressure Drop Across Valve: None required
- Temp. Range: −40° to +185°F

Normally Closed

Normally Open

The magnetic quality of Type 430 stainless steel gives these valves superior performance. Also providing good corrosion resistance, valves are interchangeable with industry standard valves from ASCO, Parker Gold Ring, and Skinner.

Connections are NPT female. Body is Type 430 stainless steel and seal is Buna-N. Valves have wire leads, a ½″ conduit port, and draw a max. of 0.41 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount in any position. UL listed and CSA certified.

Normally open valves have a top outlet.

Pipe Size	Lg.	Ht.	120 VAC Max. psi		24 VDC Max. psi

Compact Stainless Steel Solenoid Valves

A Type 303 stainless steel body provides greater corrosion resistance than Type 430 stainless steel. Connections are NPT female. Valves are closed unless energized (normally closed) and draw a max. of 0.48 amps. Mount in any position.

A&B

For Air, Water, and Oil—Buna-N Seal

- Use with air, water, inert gas, hydraulic oil, and ethylene glycol
- Pressure Drop Across Valve: None required
- Temp. Range: 120 VAC: 32° to 180°F
  24 VDC: 32° to 120°F

Valves have wire leads, a ½″ conduit port, and a NEMA 4X (indoor/outdoor; washdown/corrosion resistant) enclosure. UL listed and CSA certified (unless noted).

Submersible Stainless Steel Solenoid Valves

- Use with air, water, inert gas, oil, ethylene glycol, and soap solutions
- Pressure Drop Across Valve: None required
- Temp. Range: 0° to 150°F

Applications that include temporary submersion require valves equipped with an encapsulated solenoid in a NEMA 6 enclosure (indoor/outdoor; protection against submersion). Valves are also NSF 169 certified for beverage- and food-equipment components and suitable for vacuum service.

Connections are NPT female. Body is Type 430 stainless steel and seal is fluoroelastomer. Valves are closed unless energized (normally closed). They have wire leads and draw a max. of 0.60 amps. Mount in any position.

Pipe Size	Lg.	Ht.	VAC VALVES Max. psi	120 VAC	24 VAC		VDC VALVES Max. psi	12 VDC	24 VDC

Directional Control 3-Port Stainless Steel Solenoid Valves

Control actuated equipment in your harsh environment. Made of corrosion-resistant Type 430 stainless steel, the 3-port body switches the direction of flow to apply and exhaust pressure. Also known as 3-way valves, they're often used with presses and single-acting spring-return cylinders.

Connections are NPT female. Valves have wire leads, a 1/2″ conduit port, and draw a max. of 0.42 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Mount in any position. UL listed and CSA certified.

For Air, Water, and Oil—Buna-N Seal

- Use with air, water, inert gas, hydraulic oil, and ethylene glycol

Hazardous-Location Stainless Steel Solenoid Valves

Normally Closed

Normally Open

- Use with air, water, inert gas, and hydraulic oil
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 185° F

A fully encapsulated solenoid in a NEMA 7 enclosure provides protection in hazardous locations. Enclosure is UL listed for Class I, Groups A, B, C, D, and Class II, Groups E, F, G.

Connections are NPT female. Body is Type 430 stainless steel and seal is Buna-N. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.42 amps. Mount in any position. UL listed and CSA certified.

Normally open valves have a top outlet.

Pipe Size	Lg.	Ht.	120 VAC Max. psi		24 VDC Max. psi		
Closed Unless Energized (Normally Closed)							
1/4	1 5/8″	2 7/8″	200	7918K171	150	7918K173	$136.35

1/4	1 5/8″	3 7/8″	250	7918K191	250	7918K193	162.11

High-Pressure Stainless Steel Solenoid Valves

These valves do their best work under high pressure. Connections are NPT female. Body is Type 430 stainless steel. Valves are closed unless energized (normally closed). They have wire leads, a 1/2″ conduit port, and draw a max. of 0.41 amps. Enclosure is NEMA 4X (indoor/outdoor; washdown/corrosion resistant). Valves are 1 5/8″ Lg. x 2 7/8″ Ht. Mount in horizontal pipe with the solenoid on top.

For Air and Inert Gas—PCTFE Seal

- Use with air, water, inert gas, and hydraulic oil
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 165° F

Valves are UL listed and CSA certified.

Pipe Size	120 VAC Max. psi			24 VDC Max. psi

Miniature Stainless Steel Solenoid Valves

- Use with air, inert gas, helium, and nitrogen
- Pressure Drop Across Valve: None required
- Temp. Range: 32° to 77° F

Great for low-flow applications and extremely tight spaces, these tiny valves have a 3/4″ dia. Connections are UNF female. Body is 300 series stainless steel and seal is fluoroelastomer. Valves are closed unless energized (normally closed). They have wire leads and draw a max. of 0.05 amps. Mount in any position.

Thread Size	Ht.	Max. psi	12 VDC	24 VDC	
10-32 UNF	1 1/2″	50	5001T323	5001T322	$125.41
10-32 UNF	1 1/2″	110	5001T313	5001T312	125.41

Aluminum Solenoid Valves for Natural Gas

- Use with natural gas, butane, and propane
- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 176° F

Use one of these UL listed safety valves in your natural gas service. They're also suitable for vacuum. Connections are NPT female. Body is aluminum and seal is Buna-N. Valves are closed unless energized (normally closed) and operate on 120 VAC. They have wire leads, a 1/2″ conduit port, and draw a max. of 0.15 amps. Enclosure is NEMA 2 (indoor only; resists light splashing). Mount in any position. UL listed.

Pipe Size	Lg.	Ht.	Max. psi		
3/8	2 1/4″	3 5/8″	2.0	4689K43	$137.20
1/2	2 1/4″	3 5/8″	2.0	4689K44	144.61
3/4	3 3/8″	4 1/4″	1.5	4689K46	152.03
1	4 3/8″	4 1/2″	1.5	4689K47	191.58

For information about solenoid valves, see page 466. For information about pipe size, see pages 2-3.

Pinch-Style Aluminum Solenoid Valves for Tubing

- Use with water, inert gas, oil, ethylene glycol, and soap solutions
- Pressure Drop Across Valve: None required
- Temp. Range: 14° to 140° F

Ensure your process media is free from contamination. Also known as pinch valves, these pinch the outside of your tubing to stop flow, so valves never make contact with the contents.

Body is anodized aluminum and pinch mechanism is acetal copolymer. Valves are closed unless energized (normally closed). They have spade terminals for a DIN electrical connection and draw a max. of 1.08 amps. Enclosure is IP65 (resists splashing water). Mount in any position.

Note: Use with tubing with a max. durometer of 50A (tubing not included).

For Tube OD	ID	Lg.	Ht.	Max. psi	12 VDC	24 VDC	
1/8"	1/16"	5/8"	2 1/8"	15	5431T111	5431T112	$99.00

Polycarbonate Solenoid Valves with Push-to-Connect Tube Fittings

Just insert tubing into the push-to-connect fittings to make a tight seal. They're also suitable for vacuum service. Valves are closed unless energized (normally closed). They have a 1/4" quick-disconnect electrical connection and draw a max. of 0.78 amps. Mount in any position. CSA certified.

For Water and Inert Gas—Buna-N Seal

- Use with water and inert gas
- Pressure Drop Across Valve: None required
- Temp. Range: –10° to +100° F

For Tube OD	Lg.	Ht.	Max. psi	120 VAC	24 VDC

Chemical-Resistant Miniature Polypropylene Solenoid Valves

D

E

- Use with air, water, inert gas, oil, ethylene glycol, and soap solutions
- Pressure Drop Across Valve: None required
- Temp. Range: 33° to 120° F

Chemical resistant and compact, valves are also NSF 61 certified for use with drinking (potable) water and suitable for vacuum service. They're ideal for replacing valves in existing polypropylene systems.

Connections are NPT female. Body is glass-filled polypropylene and seal is Buna-N. Valves are closed unless energized (normally closed) and draw a max. of 0.29 amps. Enclosure is NEMA 2 (indoor only; resists light splashing). Dimensions are 1" Lg. × 2 3/8" Ht. Mount in horizontal pipe with the solenoid on top.

Style D have a 1/4" quick-disconnect connection.
Style E have wire leads and a 1/2" conduit port.

Pipe Size	VAC VALVES Max. psi	120 VAC	24 VAC	VDC VALVES Max. psi	12 VDC

Create-a-Manifold Solenoid Valves

Three Valves Shown Assembled as Manifold

- Use with air, water, inert gas, oil, and ethylene glycol
- Pressure Drop Across Valve: None required
- Temp. Range: 0° to 150° F

Save space and organize—combine multiple process lines into a single unit with one common inlet and multiple outlets. Valves attach to each other horizontally and have fluoroelastomer O-rings to seal the connection points. Suitable for vacuum service.

Pipe connections are NPT female. Seal is fluoroelastomer. Valves are closed unless energized (normally closed), operate on 120 VAC, and draw a max. of 0.07 amps. Enclosure is NEMA 1 (indoor only). Mount in any position.

Note: 6-32 threaded rods and locknuts are required (sold separately) to assemble valves into a manifold. Valves are sold individually.

NSF-Certified Acetal Solenoid Valves

- Use with drinking (potable) water
- Pressure Drop Across Valve: None required
- Temp. Range: 35° to 120° F

A good option for beverage and food-processing applications, valves are NSF 61 certified for use with drinking (potable) water. They're also suitable for vacuum service. Connections are NPT female. Body is acetal and seal is Buna-N. Valves draw a max. of 1.10 amps. Enclosure is NEMA 1 (indoor only). Valves have two 11/64" dia. mounting holes (fasteners not included); mount in horizontal pipe with the solenoid on top.

Style A have a 1/4" quick-disconnect electrical connection, a side inlet, and a side outlet.
Style B have wire leads, a side inlet, and a side outlet.
Style C have wire leads, a side inlet, and a top outlet.

Miniature Acetal Solenoid Valves

- Use with air, water, inert gas, oil, hydraulic oil, ethylene glycol, and soap solutions
- Pressure Drop Across Valve: None required
- Temp. Range: 0° to 150° F

An acetal body and fluoroelastomer seal provide chemical resistance at a lower cost than stainless steel valves. Plus, they're compact for use in tight spaces. Also suitable for vacuum service.

Connections are NPT female. Valves are closed unless energized (normally closed). They have wire leads and draw a max. of 0.23 amps. Enclosure is NEMA 1 (indoor only).

Dimensions are 1 9/16" Lg. × 2 1/4" Ht. Valves have two 1/4" dia. mounting holes (fasteners not included); mount in any position.

Pipe Size	120 VAC Max. psi			24 VDC Max. psi

Air-Driven Piston & Diaphragm Valves

For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

About Air-Driven Piston and Diaphragm Valves

Air-driven piston and diaphragm valves use compressed air to control flow in automated applications. They have higher flow capacities than solenoid valves and are smaller than air-driven ball valves.

Air-driven piston valves withstand the wear of applications with frequent on/off flow control.

Air-driven diaphragm valves handle dirty and thick fluids.

Air-Driven Bronze Piston Valves

Use compressed air to control flow. Also known as angle-seat valves, piston valves require less space than air-driven diaphragm valves.

All connections are NPT female. Body is bronze, piston is Type 431 stainless steel, and seal is PTFE.

For Air, Water, and Oil

- Use with air, water, inert gas, oil, hydraulic oil, and ethylene glycol
- Temp. Range: 14° to 355° F

Compact Air-Driven Stainless Steel Piston Valves

- Use with air, water, inert gas, steam, and oil
- Temp. Range: 15° to 366° F

Control low-flow applications in tight spaces with compressed air. Also known as angle-seat valves. A Type 316 stainless steel body and piston provide exceptional corrosion resistance for a long life in harsh environments.

All connections are NPT female. Seal is PTFE. Valves are closed unless air is on (normally closed). Require an air supply of 60-150 psi.

Pipe Size	Max. psi Liquid	Max. psi Steam	Lg.	Ht.	Air Inlet Pipe Size		
3/8	240	150	2 3/16″	4″	1/8	5032T11	$315.47

3/4	90	90	3″	4″	1/8	5032T13	354.88

Air-Driven Stainless Steel Piston Valves

- Use with steam and oil
- Temp. Range: 14° to 356° F

Exceptional corrosion resistance is paired with ease of use—these come with a solenoid that controls air supplied to the valve. Also known as angle-seat valves. A visual indicator shows if the valve is open or closed. *Normally open valves* are also for use with water.

Pipe connections are NPT female. Body is Type 316 stainless steel, piston is polyamide, and seal is PTFE. Valves require an air supply of 25-150 psi; inlet is BSPP female. UL listed.

Solenoid operates on 120 VAC @ 60 Hz and has a DIN conduit connection. Enclosure is IP65 (resists splashing water).

High-Temperature Air-Driven Stainless Steel Piston Valves

Equipped with a PEEK seal to handle applications with high temperatures and pressures. Also known as angle-seat valves.

All connections are NPT female. Body is Type 316 stainless steel and piston is brass. Valves are closed unless air is on (normally closed).

For Air and Water

- Use with air and water
- Temp. Range: −22° to +430° F

Pipe Size	Max. psi	Lg.	Ht.	Air Supply Inlet Pipe Size	Air Supply Required psi

For information about air-driven piston and diaphragm valves, see page 476; for pipe size, see pages 2-3.

Air-Driven Plastic Piston Valves

- Use with water
- Temp. Range: PVC Valves: 32° to 140° F
  Polypropylene Valves: 0° to 180° F

With no metal parts to corrode, these valves are commonly used in chemical processing and water treatment applications. All connections are NPT female. Piston is polypropylene and seal is fluoroelastomer. Valves are closed unless air is on (normally closed). Require an air supply of 40-80 psi. PVC valves are gray; polypropylene are white.

Valves have four holes on the bottom for mounting. Fasteners are not included. *Valves with 1/2 pipe size* use 1/4"-20 screws; *valves with 3/4* and *1 pipe size* use 3/8"-16 screws.

PVC Valve

Aluminum Diaphragm Valves for Dust Collectors

- Use with air and inert gas
- Temp. Range: –40° to +179° F

Designed for use in dust-collection systems, these valves release bursts of air to knock debris from air filter bags. The valve's inlet connects to your air supply, and the outlet connects to the blow tube in your system.

All connections are NPT female. Body is aluminum and diaphragm is Buna-N. Valves are closed unless air is on (normally closed). Require an air supply of 5-125 psi.

For electrical actuation, the ***solenoid valve*** (sold separately) connects to the exhaust port. **To Order:** Specify 120 VAC, 240 VAC, or 24 VDC.

Low-Profile Air-Driven Bronze Diaphragm Valves

- Use with air, water, inert gas, hydraulic oil, ethylene glycol, LP gas, and soap solutions
- Temp. Range: –20° to +180° F

At less than half the height of our other air-driven diaphragm valves, these fit well in small spaces. All connections are NPT female. Body is bronze, diaphragm is Buna-N and nylon, and seal is Type 303 stainless steel.

Repair kits include a diaphragm, spring, and seals.

Severe-Duty Air-Driven Bronze Diaphragm Valves

- Use with water and steam
- Temp. Range: –40° to +400° F

Applications that handle dirty liquids are no match for these valves. They're commonly used with water or steam in heating and cooling applications. Valves meet ANSI Class IV for tight shutoff (leakage rate of less than 0.01%).

All connections are NPT female. Body is bronze, diaphragm is molded EPDM, and seal is PTFE-coated stainless steel.

Severe-Duty Air-Driven Stainless Steel Diaphragm Valves

- Use with air, water, inert gas, steam, hydraulic oil, ethylene glycol, dirty liquids, and soap solutions
- Temp. Range: –40° to +450° F

Tackle dirty and corrosive liquids in high pressure and high temperature applications. These air-driven diaphragm valves have a Type 316 stainless steel body for superior corrosion resistance. Valves meet ANSI Class IV for tight shutoff (leakage rate of less than 0.01%) and ANSI B16.34.

All connections are NPT female. Diaphragm is fabric-reinforced EPDM and seal is PTFE-coated stainless steel. Valves are closed unless air is on (normally closed).

Pipe Size	Max. psi	Lg.	Ht.	Air Supply Inlet Pipe Size	Air Supply Required psi

Ultra-Chemical-Resistant Air-Driven PTFE Diaphragm Valves

- Use with air, water, deionized water, inert gas, hydraulic oil, ethylene glycol, and soap solutions
- Temp. Range:
  46545K43: –58° to +212° F
  45185K24: –15° to +300° F

Get superior chemical resistance in a lightweight compact valve. Also known as Weir-style valves, these are commonly used with deionized water and acids in high-purity applications. Also suitable for vacuum service.

All connections are NPT female. Body and diaphragm are PTFE. Valves are closed unless air is on (normally closed).

46545K43 has two 4-40 studs on the bottom for mounting.

Brass Float Valves

With Fixed Copper Float

With Bobbing Polypropylene Float

- Use with water
- Temp. Range: 50° to 175° F

Control flow in processing tanks and cooling towers. Valves are elbow style. Valve body and float rod are brass and seal is Buna-N. Mount in an open tank.

Valves with bobbing float are for use in tanks where the float may get jostled. Because the float moves independently of the rod, valve operation is not disrupted.

Compact Brass Float Valves

- Use with water
- Temp. Range: 50° to 175° F

Convenient for containers with limited space. Valves are elbow style. Valve body and float rod are brass and seal is Buna-N. Mount in an open tank. Floats are polyethylene, except 4607K44 has a polypropylene float.

Extended-Life Bronze Float Valves

Elbow *Inline*

- Use with water and hydraulic oil
- Temp. Range:
  Tight Shutoff: –50° to +180° F
  High Temperature: –50° to +350° F

A rugged bronze body and heavy duty assembly provide strength and durability for demanding environments. The joint between the valve and rod rotates 360° for positioning, allowing you to alter the angle to fit your tank. Valve body is bronze, float is copper, and float rod is brass. Mount in an open tank. Connections are NPT female.

Tight-shutoff valves have a neoprene seal. ***High-temperature valves*** have a PTFE seal.

NSF-Certified Stainless Steel Float Valves

- Use in food processing
- Temp. Range:
  High Temperature: 33° to 450° F
  Super-High Temperature: 33° to 550° F

Built to withstand corrosive solutions and high temperatures, these valves tolerate the harsh cleaning procedures required for food-processing applications. They are NSF 169 certified for food-equipment components. Valves are elbow style. Valve body, float, and float rod are Type 316 stainless steel. Mount in an open tank. Connections are NPT female.

High-temperature valves have a fluoroelastomer seal. ***Super-high-temperature valves*** have a PTFE seal.

For information about pipe size, see pages 2-3.

Easy-Adjust Extended-Life Float Valves

- Use with water and hydraulic oil
- Temp. Range:
  Tight Shutoff: 33° to 125°F
  High Temperature: 33° to 406°F

Get the performance of a rugged bronze or cast iron valve body in a float valve that adjusts to fit. Position the joint between the lever and float rod at the right angle and length for your tank. Float is Type 304 stainless steel and float rod is brass. Mount in an open tank. Connections are NPT female.

Tight-shutoff valves have a neoprene seal.
High-temperature valves have a bronze seal.

Corrosion-Resistant Stainless Steel Float Valves

- Use with water, hydraulic oil, acetone, and alcohol
- Temp. Range: 32° to 350°F

A Type 316 stainless steel valve body provides exceptional corrosion resistance in harsh environments. Seal is PTFE. Float rod is Type 316 stainless steel and float is Type 304 stainless steel. Connections are NPT female.

Valves for open tanks are for use only in an open tank.
Valves for closed tanks are designed to withstand the pressure in a closed tank.

Compact Corrosion-Resistant Stainless Steel Float Valves

- Use with water
- Temp. Range: 33° to 175°F

Sized for small tanks and containers, these float valves provide exceptional corrosion resistance. They're also NSF 169 certified for food-equipment components. Valves are inline style. Valve body and float rod are Type 316 stainless steel and seal is fluoroelastomer. Mount in an open tank. Inlet connection is NPT male; outlet is unthreaded.

Cast Iron Float Valves for Draining Condensate

- Use with inert gas
- Temp. Range: 32° to 450°F

Automatically remove condensate from compressed air or inert gas lines—valves have a float-operated drain control. Install as a condensate trap after the separator in your system. Valves have a top inlet, bottom outlet, and a drain with a plug.

Valve body and float are stainless steel. Housing is cast iron; meets ASTM Class 30. Mount with the inlet on top. Connections are NPT female.

Medium-capacity valves have a vent on top and a 1/4 NPT female drain. *High-capacity valve* has a 3/4 NPT female drain.

PVC Float Valves

- Use with water
- Temp. Range: 35° to 110°F

Chemical resistant and lightweight, these are a great alternative to all-metal float valves. Valves are elbow style. Valve body is PVC, seal is Santoprene, and float rod is Type 318 stainless steel. Mount in an open tank. Connections are NPT male.

Style B have extended threads on the inlet for installation through a tank wall. Include a nut and washer for mounting.

A ***B*** *With Nut and Washer*

PVC and Polypropylene Float Valves

PVC Valve

- Use with water
- Temp. Range:
  PVC Valves: 35° to 110° F
  Polypropylene Valves: 35° to 175° F

All-plastic construction makes these float valves corrosion resistant and lightweight. Valves are inline style. Seal is fluoroelastomer; float and float rod are polypropylene. Mount in an open tank. Connections are NPT female. PVC valves are gray; polypropylene are white.

Pipe Size	Flow Rate @ 40 psi	Max. psi	Float Dia.	Rod Lg.	*PVC Valves*		*Polypropylene Valves*

Compact Nylon Float Valves

- Use with water
- Temp. Range: 34° to 160° F

Get high flow in a small package. These valves also minimize noisy water hammer. They're elbow style. Valve body is fiberglass-reinforced nylon and diaphragm is polyurethane. Float is polyethylene and float rod is brass. Mount in an open tank. Connections are NPT female. 4482K71 includes adapters to reduce to 3/8, 1/2, and 3/4 pipe size.

Pipe Size	Flow Rate @ 50 psi	Max. psi	Float Lg.	Float Wd.	Rod Lg.		
1	84 gpm	80	4″	3 1/4″	5 3/4″	4482K71	$68.02

Space-Saving Nylon Float Valves

- Use with water
- Temp. Range: See table

Control the water level in spaces where a rod and lever won't fit. When the water level reaches the bottom of the valve, the float inside rises to stop flow. Valve body is glass-filled nylon and seal is silicone. Float is ABS plastic. Mount in an open tank. Connections are NPT female. Valves are 3 3/4″ Dia. × 5″ Ht.

Pipe Size	Temp. Range, °F	Flow Rate @ 50 psi	Max. psi		
1/2	33° to 90°	22 gpm	65	46585K41	$26.45
1/2	33° to 150°	22 gpm	65	46585K42	28.82
1	33° to 90°	70 gpm	100	46585K43	26.45
1	33° to 150°	70 gpm	100	46585K44	28.82

Compact Float Valves with Plastic Reservoir

With Top Inlet

- Use with water
- Temp. Range: 33° to 175° F

Commonly used in ice-making machines, these valves are NSF 169 certified for food-equipment components. Reservoir is clear polycarbonate; cover is removable. Dimensions are 5″ Lg. × 2 1/2″ Wd. × 4 1/2″ Ht. Valves have an outlet and two drains on the bottom for soft tube with 1/2″ ID.

Float valve with top inlet has a brass valve body.
Float valve with side inlet has an acetal valve body.

For Tube OD	Flow Rate @ 55 psi	Max. psi	*With Top Inlet*		*With Side Inlet*	
1/4″	0.3 gpm	125	7973K48	$38.22	7973K55	$34.48

Float Valve Bodies

Create float valves that meet exact specifications. Floats and float rods are sold separately on pages 463 and 464. Use Brass Thread Adapters (page 3268) to connect valves with rods of differing thread types.

Brass Valves

- Use with water
- Temp. Range: Buna-N Seal: 35° to 180° F
  Fluoroelastomer Seal: 33° to 450° F

Float Rods

Connect valve bodies (page 480) and floats (pages 481 and 482) to create float valves that meet exact specifications. Rods have male threads on both ends. Use Brass Thread Adapters (page 3268) to connect rods with valves and balls of differing thread types.

Type 316 stainless steel float rods provide greater corrosion resistance than brass float rods.

Stainless Steel, Copper, and Steel Floats

Use with valve bodies and rods (sold separately) or replace an existing float. All connections are female.

Stainless steel floats provide excellent corrosion resistance for use with water and oil. Use in an open or closed tank. Temp. range is –30° to +225° F.

Copper floats are for use with water in an open tank. Pressure is not rated. Temp. range is +50° to +180° F.

Steel floats are for use with oil. Use in an open or closed tank. Do not use with water. Temp. range is +32° to +212° F.

Through-Hole Copper and Stainless Steel Floats

Copper

Stainless Steel

An unthreaded connection allows these floats to slide up and down a vertical float rod. You can also set them in a fixed position using clamps. (Float rod and clamps are not included.) Use floats in an open tank.

Copper floats are for use with water. Temp. range is +50° to +180° F. Pressure is not rated.

Stainless steel floats provide excellent corrosion resistance for use with water and hydraulic oil, except for 2″ dia. floats, which are not for use with hydraulic oil. Temp. range is –30° to +225° F.

Polypropylene and Polyethylene Floats

Round

Oblong

Cylindrical

Rectangular

Get good corrosion resistance in a lightweight float. Use in an open tank. All connections are female; floats with a threaded connection come threaded or are self-tapping when used with a threaded rod. *Round floats* are UV resistant. Color is black. *Oblong*, *cylindrical*, and *rectangular floats* are off-white.

Polypropylene floats are for use with water. Temp. range is 33° to 175° F.

Polyethylene floats are for use with salts and caustic fluids. Temp. range is 33° to 140° F.

Self-Closing Brass Fire-Safety Valves

Minimize fire hazard in diesel and kerosene lines. When the ambient temperature reaches 165° F, these valves close automatically and the wheel handle fuses in place permanently. To reuse the valve, replace the wheel handle (sold separately). Designed for oil-burner installation, they can also be operated manually.

Body is brass. Seal is heat-resistant rubber. Temp. range is 20° to 165° F. Connections are NPT female.

Low-Pressure Aluminum Flame-Check Valves

Prevent flashback in flammable gas pipe lines. The flame-arresting element inside these valves absorbs the heat from a fire, which extinguishes the flame. Valves are commonly used in pilot lines connected to waste gas burners. They can be disassembled for inspection and cleaning.

Body is aluminum and the flame-arresting element is Type 316 stainless steel. Max. temp. is 176° F. Connections are NPT female.

For information about pipe size, see pages 2-3.

About Pop-Safety and Relief Valves

Pop-safety and relief valves protect equipment, tanks, and pipe by opening at a set point to relieve excess pressure. Install as close as possible to the vessel or system they protect.

Pop-safety valves provide immediate pressure relief. They "pop" open at the set pressure and remain fully open until the pressure is restored to the set pressure. *ASME-code pop-safety valves* are factory set, tested, and sealed; they are National Board certified.

Relief valves provide gradual pressure relief. They begin opening at the set pressure and are fully open at about 10% over the set pressure. Valves begin closing as the pressure drops and are fully closed when the pressure is restored below the set pressure.

ASME-Code Brass Pop-Safety Valves

- Meet ASME Code Section VIII for Air and Inert Gas
- Temp. Range: Styles A&C: –40° to +400° F
  Style B: –15° to +250° F

A&B

Protect against damage in air lines and air-powered equipment, such as air receivers and compressor tanks. Valves meet ASME standards for compressed air.

Body is brass. Valves exhaust to the atmosphere. Pipe connection is NPT male. *High-flow valves* have twice the flow capacity of medium-flow valves.

(A) Valves with Test Ring—Seal is brass. Vent is on the side.

(B) Extended-Life Valves with Test Ring—Seal is silicone for a longer service life in applications that operate close to the set pressure. Vent is on the side.

To Order: For *Styles A and B*, please specify set pressure: from 25 to 150 psi in 5 psi increments or from 175 to 300 psi in 25 psi increments, unless noted.

(C) Valves with Test Lever—Seal is brass. Vent is on the top. **To Order:** For *Style C*, please specify set pressure: 15, 20, 25, 30, 40, 50, 60, 70, 80, 90, 100, 110, 125, 130, 140, 150, 175, or 200 psi.

C

For flow capacities, go to mcmaster.com and search for **48435KAC**.

High-Pressure ASME-Code Brass Pop-Safety Valves

- Meet ASME Code Section VIII for Air and Inert Gas
- Temp. Range: –20° to +300° F

Designed for high set pressures, these valves are often used with multistage air compressors and aftercoolers and in instrument and control lines. Valves have a brass body and seal and a test ring. They exhaust to the atmosphere; vent is on the side. Pipe connection is NPT male.

To Order: Please specify set pressure: 60; 100; 250; 300; 400; 500; 750; 1,000; 1,500; 2,000; 2,500; 3,000; 3,500; or 4,000 psi.

For flow capacities, go to mcmaster.com and search for **5825TAC**.

Pipe Size	Ht.		
1/4	3 7/8"	**5825T21**	$101.66

ASME-Code Nickel-Plated Brass Pop-Safety Valves

- Meet ASME Code Section VIII for Air
- Temp. Range: –15° to +250° F

A nickel-plated brass body provides greater corrosion resistance than plain brass. Often used with air compressors. Valves have a silicone seal and a test ring. They exhaust to the atmosphere; vent is on the side. Pipe connection is NPT male.

To Order: Please specify set pressure: from 50 to 250 psi in 25 psi increments.

For flow capacities, go to mcmaster.com and search for **5784TAC**.

Pipe Size	Ht.		
1/8	2"	**5784T11**	$15.03
1/4	2"	**5784T12**	15.81
3/8	2"	**5784T13**	17.11

Cleaned and Bagged Cryogenic ASME-Code Brass Pop-Safety Valves

- Meet ASME Code Section VIII for Cryogenic Gas
- Temp. Range: –320° to +150° F

Meet ASME standards for low-temperature liquefied gas service of carbon dioxide, nitrogen, oxygen, argon, hydrogen, helium, and methane. Valves come cleaned, degreased, and bagged for oxygen service. Body and seal are brass. Pipe connections are NPT; inlet is male (bottom port) and outlet is female (side port).

To Order: Please specify set pressure: from 20 to 300 psi in 10 psi increments.

For flow capacities, go to mcmaster.com and search for **8089KAC**.

Pipe Size Inlet	Pipe Size Outlet	Ht.		
1/2	3/4	6 13/16"	**8089K12**	$187.41
3/4	1	6 13/16"	**8089K14**	210.44

Brass Pop-Safety Valves

- Use with air and inert gas
- Temp. Range: –30° to +400° F

D

Unlike ASME-code valves, you can take these apart for cleaning and servicing. Body and seal are brass. Valves exhaust to the atmosphere. Pipe connection is NPT male.

Styles D & E—Vent is on the side. **To Order:** For *Style D*, please specify set pressure: from 5 to 100 psi in 5 psi increments. For *Style E*, please specify set pressure: 10, 15, or 20 psi.

Style F—Vent is on the top. **To Order:** For *Style F*, please specify set pressure: 5 or 10 psi.

E

For flow capacities, go to mcmaster.com and search for **4772KAC**.

Pop-Safety Valves

For information about pop-safety valves, see page 483. For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	1/2″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″
Pipe Size	1/4	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3

Remote-Discharge ASME-Code Bronze Pop-Safety Valves

Protect your work environment from venting pressure relief. Valves have a threaded outlet to direct discharge to a remote location. The two-port design also provides higher flow capacities than pop-safety valves that exhaust to the atmosphere.

All have a bronze body. Pipe connections are NPT; inlet is male (bottom port) and outlet is female (side port).

(A-E) For Air and Inert Gas

A

- Meet ASME Code Section VIII for Air and Inert Gas
- Temp. Range: −15° to +406° F

Styles A-D— Seal is brass. *Style C* have a swivel test lever that moves 360° around the valve body to fit in confined areas.

Style E— Seal is fluoroelastomer for a longer service life in applications that operate close to the set pressure.

To Order: For *Styles A, B, and C*, please specify set pressure: from 15 to 150 psi in 5 psi increments or from 175 to 250 psi in 25 psi increments. For *Styles D and E*, please specify set pressure: from 15 to 150 psi in 5 psi increments or from 175 to 300 psi in 25 psi increments.

For flow capacities, go to mcmaster.com and search for **4712KAC**.

(J-L) For Steam

J

- Meet ASME Code Section I for Steam
- Temp. Range: −60° to +400° F

Styles J & K— Seal is brass. *Style J* have a swivel test lever that moves 360° around the valve body to fit in confined areas.

Style L— Seal is EPR (ethylene propylene) for a longer service life in applications that operate close to the set pressure.

To Order: Please specify set pressure: from 15 to 95 psi in 5 psi increments or from 100 to 250 psi in 25 psi increments.

For flow capacities, go to mcmaster.com and search for **4700KAC**.

For information about pop-safety valves, see page 483. For information about pipe size, see pages 2-3.

Multirange Brass Pop-Safety Valves

- Use with air and inert gas
- Temp. Range: –15° to +250° F

Change your pressure range as needed—valve comes with four color-coded springs: yellow for 25-50 psi, red for 51-100 psi, silver for 101-150 psi, and blue for 151-200 psi. Remove the thumbscrew to exchange springs; turn it to adjust the set pressure within the range. Body is brass and seal is silicone rubber. Valve exhausts to the atmosphere; vent is on the side. Pipe connection is NPT male.

Pipe Size	Ht.		
1/4	1 5/8"	50265K23	$5.88

Brass Pop-Safety Valves for Air Compressors

- Use with air
- Temp. Range: –15° to +250° F

A handy accessory for air compressors, these valves combine protection from excess pressure with convenient connection options. They have inlet and outlet ports for an inline connection, an 1/4 NPT female gauge port, and one of the connections below.

Valves have a brass body, a silicone seal, and a test ring. They exhaust to the atmosphere. Pipe connections are NPT; inlet is male (bottom port) and outlet is female (side port).

With Air Fill Valve

To Order: Please specify set pressure: 125, 135, or 150 psi.

Pipe Size Inlet	Pipe Size Outlet	Ht.		
1/2	1/4	1 7/8"	5867T11	$10.72

With Pressure Switch Port

Pressure switch port is 1/4 NPT male.

To Order: Please specify set pressure: 100, 125, 135, or 150 psi.

For flow capacities, go to mcmaster.com and search for **5867TAC**.

Pipe Size Inlet	Pipe Size Outlet	Ht.		
1/2	1/4	2 1/2"	5867T21	$13.97

Temperature-and-Pressure Bronze Pop-Safety Valves

- Use with water
- Max. Temp.: 210° F

Also known as T&P valves, these open to exhaust when the temperature reaches 210° F or at the set pressure. They're commonly used with water heaters and storage tanks. All are CSA certified. *Valves with 3/4 to 2 pipe size* meet ASME Code Section IV for hot water.

Valves have a bronze body, a silicone seal, and a test lever. Pipe connections are NPT; outlet is female (side port).

Style 2 have an extended body to fit tanks with an insulation thickness of (C).

For flow capacities, go to mcmaster.com and search for **9761KAC**.

Cleaned and Bagged Cryogenic Brass Pop-Safety Valves

- Use with liquid argon, liquid nitrogen, and liquid oxygen
- Temp. Range: –250° to +350° F

Able to withstand the extreme cold of liquefied gas, valves are cleaned, degreased, and bagged for oxygen service. Body is brass and seal is PTFE. Valves exhaust to the atmosphere; vent is on the side. Pipe connection is NPT male.

To Order: Please specify set pressure: 88 psi or any pressure from 5 to 400 psi in 5 psi increments.

Pipe Size	Ht.		
1/4	2 5/16"	9137K11	$37.77

Hot Water ASME-Code Bronze Pop-Safety Valves

- Meet ASME Code Section IV for Hot Water
- Temp. Range: 33° to 250° F

Protect your water-heating system. Valves meet ASME standards for heating boilers and have a threaded outlet to direct discharge to a remote location. They have a bronze body, a silicone seal, and a test lever. Pipe connections are NPT female; inlet is on the bottom and outlet is on the side.

To Order: Please specify set pressure: 30, 50, 60, 75, 100, 125, or 150 psi.

For flow capacities, go to mcmaster.com and search for **4702KAC**.

Pipe Size Inlet	Pipe Size Outlet	Ht.

2	2	14"	4702K62	324.79

Large-Pipe ASME-Code Cast Iron Pop-Safety Valves

Quickly relieve a large volume of air or steam. Valves have a cast iron body, a bronze seal, and a test pin or lever. Pipe connections are NPT; inlet is male (bottom port) and outlet is female (side port).

For flow capacities, go to mcmaster.com and search for **8175KAC**.

For Air

- Meet ASME Code Section VIII for Air
- Temp. Range: –20° to +406° F

Valves are for medium-pressure applications such as high-volume blowers and compressors.

To Order: Please specify set pressure: from 2 to 60 psi in 2 psi increments.

Pipe Size	Ht.		
2	7"	8175K12	$324.77
2 1/2	8"	8175K14	454.41
3	9"	8175K16	567.82

For Low-Pressure Steam

- Meet ASME Code Section IV for Low-Pressure Steam
- Temp. Range: –20° to +250° F

Set pressure is 15 psi.

Pipe Size	Ht.		
2	7 1/4"	4698K14	$294.01
2 1/2	8 1/4"	4698K15	409.90

Low-Pressure Steam Bronze Pop-Safety Valves

A

B

- Use with steam
- Max. Temp.: 250° F

Designed for use with low-pressure steam heating boilers. Valves have a bronze body, EPDM seal, and a test lever. Pipe connections are NPT; all have a male inlet (bottom port).

Style A—Valves exhaust to the atmosphere; vent is on the top. *ASME-code valve* meets Section IV for low-pressure steam. Set pressure is 15 psi.

Style B—Valves have an NPT female outlet (side port) to direct discharge to a remote location.

To Order: For *standard valves*, please specify set pressure: 5, 6, 8, 10, or 12 psi.

For flow capacities, go to mcmaster.com and search for **4699KAC**.

	Pipe Size Inlet	Pipe Size Outlet	Ht.	Standard Valves		ASME-Code Valve

ASME-Code Stainless Steel Pop-Safety Valves

- ASME Code Section VIII for Air and Inert Gas
- Temp. Range: –40° to +400° F

All-stainless construction stands up to harsh environments. Valves have a Type 304 stainless steel body and seal and a test ring. They exhaust to the atmosphere; vent is on the side. Pipe connection is NPT male.

To Order: Please specify set pressure: from 25 to 300 psi in 25 psi increments.

For flow capacities, go to mcmaster.com and search for **98905KAC**.

1/2	3 3/4″	98905K18	132.10

Custom-Set Stainless Steel Pop-Safety Valves

ASME-Code with Male Inlet

- Use with air or inert gas

Get a valve that's customized to your media (air or inert gas), pressure, and temperature requirements. Not for use with oxygen, carbon dioxide, or steam. Body is Type 316 stainless steel and seal is fluoroelastomer. Pipe connections are NPT; outlet is female (side port).

Standard valves do not have a test lever.

ASME-code valves meet Section VIII for air and inert gas and have a test lever.

To Order: Please specify media (air or inert gas), set pressure (from 25 to 2,500 psi), and maximum temperature (from –15° to +450° F).

	Pipe Size Inlet	Pipe Size Outlet	Ht.	Standard Valves		ASME-Code Valves

Brass Relief Valves

With Male Inlet

- Use with water
- Temp. Range: 33° to 180° F

Commonly used with pumps in low-pressure water systems, these nonadjustable valves ensure the set pressure stays the same. Body is brass and seal is rubber on brass. Pipe connections are NPT; outlet is female (side port).

To Order: For *valves with 1/2, 3/4, and 1 pipe size*, please specify set pressure: 30 or 75 psi. For *valves with 1 1/4 and 2 pipe size*, please specify set pressure: 30 or 65 psi.

Pipe Size	Ht.

Cleaned and Bagged Cryogenic Brass Relief Valves

Valve

- Use with liquid carbon dioxide, liquid nitrogen, and liquid oxygen
- Temp. Range: –320° to +165° F

Valves come cleaned, degreased, and bagged to meet CGA G-4.1 standards for oxygen service. Body is brass. Inlet is NPT male (bottom port) and outlet is 3/4″-20 UNEF female (top port). Valves with set pressures of 125 psi and below have a fluorosilicone seal; set pressures of 150 psi and above have a PTFE seal.

Adapters (sold separately) convert the outlet connection from UNEF female threads to NPT female threads. 49315K94 is 3/8 NPT; 49315K96 is 1/2 NPT.

To Order: Please specify set pressure: 22, 35, 50, 75, 100, 125, 150, 200, 250, 300, 350, 400, or 450 psi.

Pipe Size	Ht.	Valves		Adapters

1/2	2 13/16″	49315K73	51.04	49315K96	10.62

Adjustable Bronze Relief Valves

Adjustable Valve

Precision-Adjustable Valve

- Use with water
- Temp. Range: 33° to 200° F

Change your set pressure without guesswork. Valves are marked in 25 psi increments to indicate the set pressure; adjust within the range. They're often used for thermal expansion protection and low-capacity pump relief. Body is bronze and seal is silicone rubber. Pipe connections are NPT; inlet is male (bottom port) and outlet is female (side port).

Adjustable valves can be set from 50 to 175 psi in 25 psi increments.

Precision-adjustable valves can be set from 25 to 175 psi in 1 psi increments.

	Pipe Size Inlet	Pipe Size Outlet	Ht.		
Adjustable Valves

	3/4	3/4	4 1/8″	8088K16	27.42

Vacuum and Pressure Adjustable Brass Relief Valves

- Use with vacuum and air
- Temp. Range: –15° to +250° F

Protect against excess vacuum and pressure with one valve. Adjust vacuum from 0 to 27″ Hg and pressure from 0 to 20 psi. Body is brass. Valves exhaust to the atmosphere; vent is on the top. Pipe connection is NPT male. *Valve with 1/4 pipe size* has a Type 440C stainless steel seal; *valves with 3/8 and 3/4 pipe size* have a Buna-N seal.

Pipe Size	Ht.		
1/4	1 3/4″	48935K25	$7.53
3/8	2 1/16″	48935K35	12.61
3/4	2 3/4″	48935K45	26.13

For information about relief valves, see page 483. For information about pipe size, see pages 2-3.

Adjustable Brass Relief Valves

Change the set pressure to suit your application. Adjust set pressure within the range. Valves have a brass body.

For Water, Dyes, and Oil

- Use with water, dyes, and oil
- Temp. Range: –30° to +160° F

Valves have a lock nut to prevent accidental changes in pressure. Pipe connections are NPT; inlet is male (bottom port) and outlet is female (side port).

Medium-pressure valves have a brass seal.

To Order: For *medium-pressure valves*, please specify pressure range: 0-50, 0-300, or 0-700 psi.

High-pressure valves have a 400 Series stainless steel seal. Pressure range is 0-1,200 psi.

Pipe Size	Ht.		
Medium-Pressure Valves			
1/2	6 5/8″	9763K11	$53.61

3/4	6 5/8″	9763K65	101.54

For Fuel

- Use with diesel fuel, fuel oil, gasoline, and kerosene
- Temp. Range: –20° to +400° F

Seal is Type 416 stainless steel. Pipe connections are NPT female.

To Order: Please specify pressure range: 3-15, 7-35, 30-100, 60-175, 150-350, or 300-500 psi (250-600 psi for valves with 2 pipe size).

Pipe Size	Ht.		
3/8	5 3/8″	7844K51	$126.87

3/4	5 15/16″	4706K59	276.99

Tamper-Resistant Adjustable Steel Relief Valves

- Use with hydraulic oil
- Temp. Range: –300° to +450° F

With Male Inlet

With Female Inlet

Prevent unintentional changes to set pressure—valves have an internal adjustment nut to block access while installed. Adjust set pressure within the range. Valves also have two outlets to fit various pipe configurations. They include a plug for the unused outlet. Body is zinc-plated steel and seal is PTFE. Pipe connections are NPT; outlet is female (side and top ports).

To Order: Please specify pressure range: 50-400; 300-1,000; or 900-2,000 psi.

Pipe Size Inlet	Pipe Size Outlet	Ht.		
With Male Inlet				
1/4	1/4	4 3/8″	5026K51	$68.18

1/2	1/4	3 7/8″	5026K72	68.18

Extended-Life Adjustable Relief Valves

Combine the durability of thick walls and rugged construction with the convenience of adjustable pressure. Adjust set pressure within the range.

Precision-Adjustable Valves

- Use with water, diesel fuel, fuel oil, gasoline, hydraulic oil, kerosene, and natural gas
- Temp. Range: –60° to +450° F

Fine screw threads provide greater precision in pressure adjustments. Body and seal are bronze except valves with 1/2 and 3/4 pipe size, which have a brass body and seal. Pipe connections are NPT; inlet is male (bottom port) and outlet is female (side port).

To Order: Please specify pressure range: 0-14, 15-25, 26-40, 41-75, 76-110, 111-130, 131-150, 151-200, or 201-400 psi.

Pressure-Maintaining Valves

- Use with water, diesel fuel, fuel oil, and hydraulic oil
- Temp. Range: –40° to +450° F

Commonly used in hydraulic systems for back-pressure relief, install these valves after pumps to maintain discharge pressure. Body is bronze and seal is Type 303 stainless steel. Pipe connections are NPT female.

To Order: Please specify pressure range: 15-75, 50-150 (50-140 for valve with 1/4 pipe size), 100-300, or 200-600 psi.

Pipe Size	Ht.

Heavy Duty Valves

- Use with water, diesel fuel, fuel oil, and hydraulic oil
- Temp. Range: –320° to +420° F

Body is bronze and seal is Type 316 stainless steel. Pipe connections are NPT; inlet is male (bottom port) and outlet is female (side port).

To Order: Please specify pressure range: 15-75, 50-150, 100-300, 200-600, or 600-900 psi. Note: The 1 1/2 pipe size is not available at 600-900 psi.

Adjustable Cast Iron Relief Valves

- Use with diesel fuel, fuel oil, and hydraulic oil
- Temp. Range: –20° to +400° F

Often used in hydraulic and lubrication systems, these valves can handle thick liquids at high temperatures. Adjust set pressure within the range. Body is cast iron and seal is Type 416 stainless steel. Pipe connections are NPT female.

To Order: Please specify pressure range: 3-15, 7-35, 30-100, 60-175, 150-350, or 300-500 psi (250-600 psi for valves with 2 pipe size).

Pipe Size	Ht.

Adjustable Pressure-Maintaining Cast Iron Relief Valves

- Use with water, hydraulic oil, diesel fuel, and fuel oil
- Temp. Range: –40° to +200° F

Maintain consistent discharge pressure from process equipment. Also known as back-pressure relief valves and regulators, install them after the equipment they protect. They're commonly used as bypass lines after centrifugal, reciprocating, and rotary pumps. Adjust set pressure within the range. Body is cast iron and seal is brass. Pipe connections are NPT female. Inlet and outlet are on the side; exhaust/bypass port is on the bottom.

To Order: Please specify pressure range from those listed in the table.

Pipe Size	Available Pressure Ranges, psi	Ht.

Adjustable Pressure-Maintaining Aluminum Relief Valves

- Use with air
- Temp. Range: –20° to +160° F

Protect instruments in systems supplied by a compressor. Also known as back-pressure regulators, these valves maintain consistent air pressure in your pipeline. Adjust set pressure within the range. They have a cast aluminum body, Buna-N seal, and 1/4 NPT female gauge port. Valves exhaust to the atmosphere; vent is on the side. Pipe connections are NPT female. Inlet and outlet are on the side.

To Order: Please specify pressure range: 0-2, 0-10, 0-30, 0-60, or 0-150 psi.

1/2	6 1/16″	4783K55	130.31

Custom-Set Stainless Steel Relief Valves

With Male Inlet

- Temp. Range: –15° to +400° F

Set specifically for your media and pressure, these valves have the highest set pressures we offer. Body is Type 316 stainless steel and seal is fluoroelastomer. Pipe connections are NPT; outlet is female (side port).

To Order: Please specify media (air, inert gas, water, hydraulic oil, fuel oil, gasoline, or diesel fuel) and set pressure (from the range in the table).

Pipe Size Inlet	Pipe Size Outlet	Available Pressures, psi	Ht.		
With Male Inlet

Adjustable Pressure-Maintaining Compact Plastic Relief Valves

- Use with air
- Temp. Range: 40° to 150° F

Maintain consistent pressure in small-scale systems supplied by an air compressor. Also known as back-pressure regulators, these valves are often used to protect instruments and control devices. Adjust set pressure within the range. Body is polysulfone and seal is silicone. Mount with four #4-40 UNC holes. Fasteners are not included. Pipe connections are female. Inlet and outlet are on the side.

To Order: Please specify pressure range: 0.5-3.5, 0.5-10, 0.5-30, 0.5-60, or 0.5-90 psi.

Connection Size	Ht.		
10-32 UNF	3 1/8″	99045K12	$30.40
1/8 NPT	3 1/8″	99045K11	36.88

Adjustable Stainless Steel Relief Valves

Pair the corrosion resistance of stainless steel with the convenience of adjustable pressure. Adjust set pressure within the range.

Type 303 Stainless Steel Valves

- Use with air and hydraulic oil
- Temp. Range: –40° to +250° F

Seal is Buna-N. Pipe connections are NPT female.

To Order: Please specify pressure range: 4-15, 10-50, or 40-125 psi.

Pipe Size	Ht.		
1/2	5 7/8″	4706K67	$480.51
3/4	5 15/16″	4706K69	478.54

Type 316 Stainless Steel Valves

- Use with water, diesel fuel, fuel oil, gasoline, hydraulic oil, and kerosene
- Temp. Range: +40° to +250° F

Seal is Type 316 stainless steel. Pipe connections are NPT. Inlet is male (bottom port); outlet is female (side port).

To Order: Please specify pressure range: 30-100; 101-400; 401-1,000; or 1,001-2,000 psi.

Pipe Size	Ht.		
1/2	4 3/16″	5027K11	$291.58

Chemical-Resistant Adjustable PVC Relief Valves

With no metal parts to corrode, these valves are well suited for corrosive liquids. Adjust set pressure within the range. Body is PVC; color is gray. Pipe connections are NPT female.

Relief Valves

- Use with water, aluminum bromide, aluminum chloride, boric acid, and hydrogen sulfide
- Temp. Range: 40° to 140° F

Valves have an EPDM seal and 1/4 NPT female gauge port. Inlet is on the bottom; outlet is on the side.

Pipe Size	Pressure Range, psi	Ht.		
1/2	5-75	6 3/4″	5007K61	$310.51
3/4	5-75	6 7/8″	5007K62	352.23

3-Port Relief Valves

1/2 and 1 Pipe Size

- Use with water, potassium sulfate, and sodium hypochlorite
- Temp. Range: 0° to 140° F

Install these valves inline for continuous flow in your pipeline. They have a threaded outlet to route discharge back through your system or to a remote location. Seal is PTFE. Inline connections are on the side; outlet is on the bottom.

Pipe Size	Pressure Range, psi	Ht.		
1/4	10-150	3 17/32″	46315K24	$175.00

1	10-250	5 15/16″	46315K27	405.00

For information about relief valves, see page 483. For information about pipe size, see pages 2-3.

Miniature PVDF Relief Valves

- Use with air
- Temp. Range: 26° to 255° F

Relieve excess pressure in air lines. Valve body is PVDF, also known as Kynar. Seal is Buna-N. Valves exhaust to the atmosphere; vent is on top.

To Order: Please specify set pressure: 0.5, 1, 1.5, 3, 6, or 10 psi.

NPT Male

Valves are often used in air tanks.

Pipe Size	Ht.		
1/8	7/8"	4277T51	$19.89

1/2"	2 1/8"	4320T16	27.78

Brass Pipe-Fitting Rupture Discs

- Temp. Range: –50° to +750° F

Prevent damage from excess pressure in tanks and pipe lines. If your system exceeds the burst pressure, rupture discs break open for instant relief. They are one-time-use—once a disc has burst, it cannot be used again. Body is brass. Connections are NPT male.

Style A discs vent to the atmosphere. Vent is muffled.

Style B discs have a threaded outlet to direct discharge to a remote location.

A

B

To Order: Please specify burst pressure: 100, 125, 150, 200, 250, 500, or 750 psi.

	Pipe Size Inlet	Pipe Size Outlet	Lg.	Ht.		
A	1/4	—	—	1 5/8"	4412T11	$97.95
B	3/8	1/2	2 1/8"	—	4412T12	98.74
B	1/2	1/2	2 1/4"	—	4412T13	97.95

Graphite Flange-Mount Rupture Discs

- Temp. Range: –20° to +392° F

Safeguard against excess pressure. If your system exceeds the burst pressure, rupture discs break open, providing unrestricted flow for instant relief. They are one-time-use—once a disc has burst, it cannot be used again. Disc is resin-impregnated graphite, which resists wear from large changes in pressure and temperature. They come with two neoprene gaskets; install between ANSI Class 150 flanges.

Discs for low pressure have supports to resist rupture caused by vacuum. They withstand up to 29.92" Hg.

To Order: Please specify burst pressure from those listed in the table.

Pipe Size	OD	Thick.	Discs for Low Pressure: Available Burst Pressures, psi			Discs for Medium Pressure: Available Burst Pressures, psi

About Check Valves and Backflow Prevention Valves

Check valves and backflow prevention valves stop backward flow in your pipeline. They only allow flow in one direction.

Check valves open when flow moves in the correct direction and close when flow stops or reverses.

Backflow prevention valves protect your water supply from contamination due to backward flow. They are an assembly of at least two check valves separated by an air gap for maximum protection.

Brass Check Valves

- Use with: See table
- Max. Pressure: See table
- Temp. Range: –20° to +180° F

A spring-close design prevents slamming when valves close to stop backward flow. Body is brass. At least 1 psi is required to open valves. Install in any direction. Connections are NPT.

Super-Quiet Brass Check Valves

- Use with: See table
- Max. Pressure: 200 psi @ 70° F (unless otherwise stated)
- Temp. Range: 33° to 225° F (unless otherwise stated)

Prevent noisy slamming—valves have a spring-close design that stops backward flow quietly. At least 2 psi is required to open valves. Install in any direction. Connections are NPT female.

Valves with Type 303 stainless steel seal are also for use with steam at a max. pressure of 75 psi @ 300° F and temp. range of 33° to 300° F.

Nickel-plated brass valves provide greater corrosion resistance than plain brass.

Check Valves with Yor-Lok Tube Fittings

- Use with water, oil, inert gas, air, diesel fuel, gasoline, and natural gas
- Max. Pressure: See table
- Temp. Range: Brass: –30° to +275° F
  Type 316 SS: –10° to +375° F

Get a leak-free compression seal between your valve and tubing. Connections are Yor-Lok double-ferrule compression tube fittings which are compatible with Swagelok® and Parker A-Lok fittings. For information about Yor-Lok fittings, see page 174. Valves are often used in process-control and instrumentation applications. At least 1 psi is required to open valves. Install in any direction.

Brass valves have a Buna-N seal.

Type 316 stainless steel valves have excellent corrosion resistance. Seal is fluoroelastomer.

NSF-Certified Brass Check Valves for Drinking Water

- Use with drinking water
- Max. Pressure: 400 psi @ 167° F
- Temp. Range: 10° to 210° F

Meet requirements for drinking (potable) water. Valves are NSF 61 certified in all states as of April 1, 2011. Body is brass and seal is Buna-N. At least 0.5 psi is required to open valves. Install in any direction. Connections are NPT female.

Pipe Size	Lg.			Pipe Size	Lg.		
1/2	2 5/16"	8517T23	$11.68	1 1/4	2 15/16"	8517T26	$31.46
3/4	2 9/16"	8517T24	15.87	1 1/2	3 3/16"	8517T27	56.05

Pipe-to-Tube Adapter Brass Check Valves

- Use with water, oil, and air
- Max. Pressure: 400 psi @ 70° F
- Temp. Range: –65° to +250° F

Protect against backward flow while adapting pipe to tube. Inlet is NPT male and outlet is a compression fitting for a tight seal with copper, brass, and aluminum tubing. Body and seal are brass. At least 3 psi is required to open valves. Install in any direction.

Pipe Size	Fits Tube OD	Lg.

Silicon Bronze Check Valves

- Use with water
- Max. Pressure: See table
- Temp. Range: 32° to 190° F

Made of silicon bronze for greater strength and corrosion resistance than brass. Seal is Buna-N. At least 2 psi is required to open valves. Install for horizontal or upward flow. Connections are NPT female.

Pipe Size	Max. psi @ 70°F	Lg.		
1/2	400	2 5/8"	4616K91	$25.45

For information about check valves, see page 489. For information about pipe size, see pages 2-3.

Bronze Check Valves

- Use with water, oil, inert gas, air, steam, and diesel fuel
- Max. Pressure:
  Class 125: Water, Oil, and Inert Gas: 200 psi @ 150° F; Steam: 125 psi @ 353° F
  Class 150: Water, Oil, and Inert Gas: 300 psi @ 150° F; Steam: 150 psi @ 366° F
  Class 200: Water, Oil, and Inert Gas: 400 psi @ 150° F; Steam: 200 psi @ 388° F
  Class 300: Water, Oil, and Inert Gas: 600 psi @ 150° F; Steam: 300 psi @ 422° F
- Temp. Range:
  Class 125 and Class 150: –20° to +406° F
  Class 200 and Class 300: –20° to +550° F

Meet industry standards for pressure and temperature—valves are class-rated and meet MSS-SP-80. Also known as swing check valves. A threaded cap provides easy access for maintenance. Body is bronze and seal is metal. At least 0.5 psi is required to open valves. Install for horizontal or upward flow. Connections are NPT female.

Bronze Check Valves with Solder-End Connections

- Use with water, oil, inert gas, air, and steam
- Max. Pressure:
  Water, Oil, and Inert Gas: 200 psi @ 70° F
  Steam: 125 psi @ 353° F
- Temp. Range: –20° to +406° F

Incorporate protection against backward flow in tubing lines. Also known as swing check valves. A threaded cap provides easy access for maintenance. Body and seal are bronze. At least 0.5 psi is required to open valves. Install for horizontal or upward flow. Rated Class 125 and meet MSS-SP-80. Connections are solder-end (unthreaded) female.

Tube Size★	Actual Tube OD	Lg.	Class 125	
1/4	3/8"	2 1/16"	9782K12	$44.51
3/8	1/2"	2 1/16"	9782K14	46.31
1/2	5/8"	2 9/16"	9782K16	49.92
3/4	7/8"	3 3/8"	9782K18	67.36
1	1 1/8"	4 1/16"	9782K22	96.83
1 1/2	1 5/8"	5 1/4"	9782K26	162.99
2	2 1/8"	6 3/8"	9782K28	239.98

★ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

High-Use Bronze Check Valves

- Use with water, oil, inert gas, air, steam, diesel fuel, and gasoline
- Max. Pressure:
  Class 125:
  Water, Oil, and Inert Gas: 200 psi @ 70° F
  Steam: 175 psi @ 353° F
  Class 300:
  Water, Oil, and Inert Gas: 1,000 psi @ 70° F
  Steam: 520 psi @ 421° F
- Temp. Range:
  Class 125: –20° to +406° F
  Class 300: –20° to +450° F

Designed to withstand the frequent opening and closing of pulsating flow. A threaded cap provides easy access for maintenance. Body and seal are bronze, except 4894K47 has a brass seal. At least 2 psi is required to open valves. Install for horizontal or upward flow. Meet MSS-SP-80. Connections are NPT female.

Extended-Life Bronze Check Valves

- Use with water, oil, inert gas, air, steam, diesel fuel, gasoline, and natural gas
- Max. Pressure: Water, Oil, and Inert Gas: 400 psi @ 70° F
  Steam: 125 psi @ 350° F
- Temp. Range: –20° to +350° F

Spend less time on valve maintenance—the strength and corrosion resistance of bronze is paired with the durability of PTFE for a longer service life. Body is bronze and seal is PTFE. At least 0.5 psi is required to open valves. Install for horizontal or upward flow. Connections are NPT.

Pipe Size	Female Inlet × Female Outlet Lg.			Male Inlet × Female Outlet Lg.

High-Temperature Bronze Check Valves

- Use with: See table
- Max. Pressure: 300 psi @ 70° F
- Temp. Range: 50° to 500° F

A heat-resistant rubber seal allows these valves to withstand temperatures up to 500° F. They also have a threaded cap for easy access for maintenance. Body is bronze. At least 2 psi is required to open valves. Install for horizontal or upward flow. Connections are NPT female.

Stainless Steel Check Valves

- Use with water, oil, air, diesel fuel, and gasoline; valves with PTFE seal are also for use with steam
- Max. Pressure: See table
- Temp. Range: −4° to +350° F

The excellent corrosion resistance of a Type 316 stainless steel body is paired with quiet operation—a spring-close design prevents valves from slamming closed. At least 3.6 psi is required to open valves. Install for horizontal or upward flow. Connections are NPT female.

Easy-to-Install Check Valves

- Use with water, oil, inert gas, air, diesel fuel, gasoline, and natural gas
- Max. Pressure: 1,500 psi @ 70° F
- Temp. Range: −10° to +400° F

Insert one of these valves into a 45° ground joint union pipe fitting for an easy solution to backward flow. ***Check valves*** have a Type 316 stainless steel body and fluoroelastomer seal. At least 0.5 psi is required to open. Install for horizontal or upward flow. ***Union fittings*** (sold separately) are Type 316 stainless steel. Connections are NPT female.

High-Flow Stainless Steel Check Valves

With Socket Weld Connections

- Use with water, oil, inert gas, air, steam, diesel fuel, and gasoline
- Max. Pressure:
  Water, Oil, and Inert Gas: 200 psi @ 70° F
  Steam: 150 psi @ 350° F
- Temp. Range: −20° to +400° F

Combine excellent corrosion resistance with high flow. Also known as swing-check valves. Body and seal are Type 316 stainless steel. At least 0.5 psi is required to open valves. Install for horizontal or upward flow. Connections are female.

With NPT Connections

Sanitary Quick-Clamp Stainless Steel Check Valves

- Use with food and beverage
- Max. Pressure: 150 psi @ 400° F
- Temp. Range: −20° to +400° F

Meet 3-A sanitary standard requirements for food, beverage, pharmaceutical, and biotechnology applications. Valves are polished to a fine finish to inhibit bacterial growth and have quick-clamp connections for easy cleaning in place. Body is Type 316L stainless steel. At least 0.5 psi is required to open valves. Install for upward flow. Use with quick-clamp fittings on pages 208-210.

Extended-Life Iron Check Valves

For Inert Gas and Steam

- Use with: See table
- Max. Pressure:
  Type 303 SS Seal: 5,000 psi @ 70° F
  Ductile Iron Seal:
  Inert Gas: 1,000 psi @ 70° F
  Steam: 700 psi @ 450° F
- Temp. Range:
  Type 303 SS Seal: −30° to +200° F
  Ductile Iron Seal: −20° to +550° F

A rugged iron body provides strength and durability for a long service life. Valves have a threaded cap for easy access for maintenance. At least 2 psi is required to open valves. Install for horizontal or upward flow. Connections are NPT female.

Valves for inert gas and steam are rated Class 300.

Pipe Size	Lg.		
For Water— *Type 303 Stainless Steel Seal*			
1	4 1/2″	4620K45	$146.41
For Steam and Inert Gas— *Ductile Iron Seal*

1 1/2	5 7/16″	4900K5	514.49
2	6 5/8″	4900K6	562.40

For information about check valves, see page 489. For information about pipe size, see pages 2-3.

High-Pressure Compact Check Valves

- Use with: See table
- Max. Pressure:
  Brass: 2,000 psi @ 70° F
  Steel and Type 303 SS: 3,000 psi @ 70° F
- Temp. Range: –30° to +190° F

Great for use in tight spaces, these small valves are suitable for high-pressure applications. At least 2.5 psi is required to open valves. Install in any direction. Connections are NPTF (Dryseal) male.

Brass valves are more corrosion resistant than steel valves.

Steel valves are harder and stronger than brass valves.

Type 303 stainless steel valves provide greater corrosion resistance than brass or steel valves.

Flange-Mount Check Valves

- Use with: See table
- Max. Pressure:
  Cast Iron: 200 psi @ 70° F
  Type 316 Stainless Steel: 275 psi @ 70° F
- Temp. Range:
  Cast Iron: –20° to +250° F
  Type 316 Stainless Steel: –20° to +1000° F

Add protection against backward flow in flanged pipelines. Easy to install and maintain, sandwich valves between two flanges. At least 1.25 psi is required to open. Install for horizontal or upward flow.

Valves for water, oil, and inert gas have a cast iron body and Buna-N seal. They fit ANSI Class 125 and 150 flanges with the same pipe size. FM approved.

Valves for water and ethylene glycol have a Type 316 stainless steel body and seal. They fit ANSI Class 150 and 300 flanges with the same pipe size. Meet API 594 and API 598.

Super High-Pressure Check Valves

- Use with water and oil
- Max. Pressure:
  Brass: 2,000 psi @ 70° F
  Steel: 5,000 psi @ 70° F
  Type 303 Stainless Steel: 5,000 psi @ 70° F
- Temp. Range:
  High-Flow Valves: –30° to +200° F
  High-Temperature Valves: –15° to +400° F

Thick walls and rugged construction withstands high pressure. Often used in hydraulic applications. Seal is Type 440 stainless steel. At least 1 psi is required to open valves. Install in any direction. Connections are NPTF (Dryseal) female.

Brass valves are more corrosion resistant than steel valves.

Steel valves are harder and stronger than brass valves.

Type 303 stainless steel valves provide greater corrosion resistance than brass or steel valves.

Super Duty High-Temperature Steel Check Valves

With NPT Connections

- Use with water, oil, inert gas, air, diesel fuel, and gasoline
- Max. Pressure: 1,975 psi @ 100° F
- Temp. Range: –20° to +800° F

Withstand the harsh conditions of petroleum and power-processing systems. Rated Class 800, valves have a steel body for strength at high temperatures and pressures. Seal is Type 304 stainless steel and graphite. At least 1.1 psi is required to open valves. Install in any direction. Meet API 598, API 602, and ASME B16.34. All connections are female.

High-use valves resist wear from frequent opening and closing of pulsating flow.

High-flow valves are also known as ball check valves.

With NPT Connections

Sure-Seal Steel Check Valves for Hydraulic Oil

- Use with hydraulic oil, water, oil, inert gas, and air
- Max. Pressure: 3,000 psi @ 70° F
- Temp. Range: –30° to +250° F

Commonly used in hydraulic applications, a soft seal design prevents leakage at high pressures. Body is zinc-plated steel for excellent strength and corrosion resistance. Seal is Buna-N. At least 2 psi is required to open valves. Install in any direction. Connections are NPT.

Check Valves

For information about check valves, see page 489. For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	3

Flanged Class 125 Cast Iron Check Valves

- Use with oil, air, steam, diesel fuel, and natural gas
- Max. Pressure:
  Water, Oil, and Inert Gas: 200 psi @ 70° F
  Steam: 125 psi @ 353° F
- Temp. Range: –20° to +406° F

Easy to install, simply bolt these valves with ANSI Class 125 flange connections to flanges of the same pipe size. Body is cast iron and seal is bronze. At least 1 psi is required to open valves. Install for horizontal flow. Meet MSS-SP-71.

Pipe Size	Lg.	Fits Flange OD	Bolt Circle Dia.	Bolt Hole Qty.	Bolt Size

Easy-View PVC Check Valves with Socket Weld Connections

- Use with: See table
- Max. Pressure: 150 psi @ 70° F
- Temp. Range: 32° to 140° F

View and remove debris without disconnecting your pipeline. Valves have a transparent body and a threaded cap for easy access for maintenance. Use with Schedule 40 and 80 fittings. Body is PVC. At least 0.29 psi is required to open. Install in any direction. Connections are unthreaded pipe end (male).

Pipe Size	Lg.		
For Water— *EPDM Seal*			
1/2	5 5/8″	4754K52	$40.11

Easy-to-Install Plastic Check Valves

- Use with water, oil, and diesel fuel
- Max. Pressure: 150 psi @ 70° F
- Temp. Range: 40° to 140° F

Union fittings simplify installation and allow for maintenance without detaching your pipe connections. Use with Schedule 80 pipe and fittings. Seal is fluoroelastomer. At least 1 psi is required to open valves. Install for horizontal or upward flow. Connections are female.

PVC valves are dark gray. ***CPVC valves*** are gray. ***Polypropylene valves*** are most corrosion resistant. Color is white.

★ Max. pressure is 150 psi @ 70° F. Seal is fluoroelastomer.

NSF-Certified PVC Check Valves

With NPT Connections

With Socket Weld Connections

- Use with drinking water
- Max. Pressure: 150 psi @ 70° F
- Temp. Range: 33° to 140° F

A good option for beverage and food-processing systems, valves are NSF 61 certified for use with drinking (potable) water. Use with Schedule 40 pipe and fittings. Body is PVC and seal is EPDM. At least 0.5 psi is required to open valves. Install for horizontal or upward flow. Connections are female.

Quiet-close valves have a spring-close design to stop noisy slamming when they close and prevent damage from pump start-ups.

High-flow valves provide reduced resistance to flow in your pipeline. They're also known as swing check valves.

With NPT Connections

Pipe Size	QUIET CLOSE Lg.	White		HIGH FLOW Lg.	White		Clear	
1/2	3 1/4″	46835K32	$7.10	4 5/8″	45275K42	$10.35	6274T82	$16.14

For information about check valves, see page 489. For information about pipe size, see pages 2-3.

Drain, Waste, and Vent PVC Check Valves with Socket Weld Connections

- Use with water
- Max. Pressure: 0 psi (gravity flow)
- Temp. Range: 33° to 140° F

Prevent backward flow of waste water. A threaded cap provides easy access for maintenance. Use with Schedule 40 pipe and fittings. Body and seal are PVC. Valves are gravity flow; 0 psi is required to open. Install for horizontal flow. Valves meet ASTM D1784, D2665, and D3311 and are ICC, CSA, and IAPMO certified. Color is white. Connections are unthreaded socket end (female).

Pipe Size	Lg.		
1½	4 3/16″	4670K12	$23.88
2	4½″	4670K14	23.88

4	9¾″	4670K18	30.38
6	15 3/16″	4670K22	134.26

Polypropylene Check Valves

- Use with: See table
- Max. Pressure: 125 psi @ 70° F
- Temp. Range: 33° to 140° F

A glass-filled polypropylene body provides good strength in a lightweight valve. At least 0.33 psi is required to open. Install in any direction. Color is black. Connections are NPT female.

Pipe Size	Lg.		
For Water, Inert Gas, and Air— *Buna-N Seal*

Plastic Check Valves with Barbed Tube Fittings

- Use with: See table
- Max. Pressure:
  Buna-N & Fluoroelastomer Seal: 125 psi @ 70° F
  Silicone Seal: 50 psi @ 70° F
- Temp. Range: 33° to 140° F

Barbed connections make a tight seal with tubing. At least 1 psi is required to open valves. Install in any direction. Color is white.

Nylon valves are more impact resistant than polypropylene valves. *Valves with silicone seal* are made of FDA-compliant materials.

Nylon Check Valves with Push-to-Connect Tube Fittings

- Use with air
- Max. Pressure: 145 psi @ 70° F
- Temp. Range: 32° to 158° F

With push-to-connect fittings that make a tight seal around tubing, these valves are well suited for use with air. Body is nylon and seal is Buna-N. At least 7 psi is required to open valves. Install in any direction. Color is black.

For Tube OD	Lg.		
5/32″	1½″	1096T1	$13.14

Chemical-Resistant PVDF Check Valves

- Use with water, oil, inert gas, diesel fuel, and gasoline
- Max. Pressure: 220 psi @ 70° F
- Temp. Range: 40° to 180° F

Strength and wear resistance are combined with chemical resistance—valve body is PVDF, also known as Kynar, and seal is fluoroelastomer. At least 2.5 psi is required to open valves. Install in any direction. Color is white. Connections are NPT male.

Pipe Size	Lg.		
⅛	1″	46505K21	$11.22
¼	1 7/16″	46505K31	11.94
⅜	1½″	46505K33	12.73
½	1 13/16″	46505K35	14.37

Ultra Chemical-Resistant PFA Check Valves

- Use with ammonia hydroxide, deionized water, methanol, and mineral spirits
- Max. Pressure: 100 psi @ 150° F
- Temp. Range: 0° to 300° F

Suitable for high-purity chemical handling, a PFA body provides a strong friction-resistant surface and excellent corrosion resistance. Seal is chemical-resistant Kalrez. At least 1.8 psi is required to open valves. Install in any direction. Color is white. Connections are NPT female.

Pipe Size	Lg.		
¼	2⅜″	47155K81	$162.25
½	3⅜″	47155K83	189.45

Polyethylene Check Valves for Vacuum Service

- Use with water, inert gas, air, and vacuum
- Max. Vacuum: 29.9″ Hg
- Temp. Range: 33° to 150° F

Stop backward flow caused by back pressure in vacuum lines. Body is polyethylene and seal is neoprene. Max. pressure is 20 psi. Install in any direction. Color is white. Connections are tapered ends.

For Tube ID	Lg.		
¼″ to 5/16″	2¾″	4610K13	$6.30
⅜″ to ½″	3 3/16″	4610K17	8.70

Nylon Check Valves

- Use with water and air
- Max. Pressure: 125 psi @ 70° F
- Temp. Range: –20° to +180° F

Made of nylon for high strength and impact resistance. Seal is Buna-N. At least 1 psi is required to open valves. Install for horizontal or upward flow. Color is white.

Pipe-to-Pipe Connectors

Connections are NPT male.

Pipe Size	Lg.		
⅛	1″	1424T11	$15.00
⅜	1¼″	1424T19	15.00
¼	1¼″	1424T15	15.00

¾	1½″	1424T45	16.43

Pipe-to-Tube Adapters

Inlet is NPT male and outlet is a barbed tube fitting.

Connection Size Inlet	Outlet	Lg.		
⅛ NPT	For 3/16″ Tube ID	1½″	1371T12	$15.00
¼ NPT	For ¼″ Tube ID	1⅝″	1371T36	15.00
¼ NPT	For ⅜″ Tube ID	1⅝″	1371T42	15.00
½ NPT	For ⅜″ Tube ID	1¾″	1371T76	15.00
½ NPT	For ½″ Tube ID	1¾″	1371T78	16.43

For information about check valves, see page 489. For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

Acetal Check Valves with Push-to-Connect Tube Fittings

- Use with: See below
- Max. Pressure: Acetal Seal: 145 psi @ 68° F
  Buna-N Seal: 125 psi @ 70° F
- Temp. Range: 40° to 100° F

An acetal body provides greater moisture resistance than nylon for use in humid environments. Push-to-connect tube fittings make a tight seal around the outside of tubing. Minimum pressure required to open valves is not rated. Install for horizontal flow.

Tube-to-Tube Connectors—For Drinking Water

Valves are NSF 61 certified for use with drinking (potable) water. Seal is acetal. Color is white. Connections are push-to-connect tube fittings.

High-Use Plastic Check Valves

- Use with: See table
- Max. Pressure: 15 psi @ 70° F
- Temp. Range: –20° to +250° F

Designed for frequent operation, these valves can be cycled as often as once per second. At least 0.5 psi is required to open valves. Install for horizontal flow. Connections are barbed, except valves for 1/8″ tube ID have straight ends.

Polypropylene valves are white. ***Nylon valves*** are more impact resistant than polypropylene valves. Color is white and black, except 47245K25 is green and K17 is white and gray. ***PVDF valves*** resist abrasion and UV light. Color is white, except 47245K35 is blue.

Backflow Prevention Valves for Water

A

B

Male Inlet × Female Outlet

- Max. Pressure: 150 psi @ 180° F
- Temp. Range: 33° to 180° F

Protect your water supply—valves prevent backward flow caused by back pressure. Seal is Buna-N. At least 10 psi is required to open valves. Install for horizontal or upward flow. Valves meet ASSE 1024. Connections are NPT.

Style A are NSF 61 certified for drinking (potable) water in all states as of April 1, 2011. Body is copper.

Style B have thick walls and a rugged bronze body for a long service life. They can be used for drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012. CSA certified.

- Temp. Range:
  Style C: 33° to 140° F
  Style D: 33° to 250° F

Safeguard water supply lines to boilers, laboratory equipment, and processing tanks. Also known as dual-check backflow prevention valves, these have two internal check valves with a vent between them to discharge water in case of failure. Install for horizontal or upward flow. CSA certified.

Style C has an unthreaded vent. At least 2 psi is required to open valve. Body is chrome-plated brass. Meets ASSE 1035. Inlet is male and outlet is female.

Style D have an integral strainer to prevent debris from blocking the check valves. At least 25 psi is required to open valves. Body is brass. Vent is 1/2 NPT female. Meet ASSE 1012. Connections are female.

With NPT Connections

Pipe Size	O'all Lg.		
(C) Chrome-Plated Brass Valve			
3/8	2 3/8″	4760K63	$60.85
(D) Brass Valves			
1/2	4 15/16″	4760K51	62.92
3/4	4 1/2″	4760K52	65.08

With Solder-End (Unthreaded) Connections

Tube Size★	Actual Tube OD	O'all Lg.		
(D) Brass Valves				
1/2	5/8″	4 3/8″	4760K66	$62.92
3/4	7/8″	4 13/16″	4760K67	65.09

★ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

Sump Pump ABS Check Valves with Hose Clamps

- Use with water
- Max. Pressure: 25 psi @ 70° F
- Temp. Range: 33° to 130° F

Prevent dirty water from flowing back to your pump. Valves have flexible couplers with hose clamps to slip over ABS, PVC, or steel pipe or copper tubing for easy installation. Body is ABS and seal is EPDM rubber and stainless steel. At least 2 psi is required to open valves. Install for horizontal or upward flow. 7744K11 is black and 7744K12 is green.

For Pipe Size	Lg.		
1 1/4 and 1 1/2	4 13/16″	7744K11	$12.81
2	6″	7744K12	25.49

For information about backflow prevention valves, see page 489. For information about pipe size, see pages 2-3.

Easy-Service Bronze Backflow Prevention Valves for Water

- Max. Pressure: 175 psi
- Temp. Range: Styles A, B, and D: 33° to 180°F
  Style C: 33° to 140°F

Get maximum protection against contamination while simplifying maintenance—valves have integral test cocks and ball valves to control flow for inspection or service. They also include two check valves and a strainer. Valves are ANSI certified for use with drinking (potable) water in all states as of July 1, 2011. Pipe connections are NPT.

Styles A-C—Also known as reduced pressure zone valves, these have an integral relief valve to discharge water in case of failure. They are ASSE 1013 listed and USC approved. *Styles A and B* must be installed for horizontal flow. *Style B* is NSF 61 certified. *Style C* have an additional air inlet to provide high capacity relief in emergency conditions. It is NSF 61 certified. Install in any position.

Style D—Thick-wall construction provides durability in demanding environments. Also known as dual-check backflow prevention valves. Install in any direction. They're ASSE 1015 listed, NSF 61 and CSA certified, and USC approved.

High-Pressure Stainless Steel Vacuum-Breaking Valves

- Max. Pressure: 1,500 psi @ 70°F
- Temp. Range: –10° to +400°F

Add protection against backward flow in high-pressure applications. Well suited for tight spaces, the bushing-style design requires minimal space for inline installation. Use with water, oil, inert gas, and air. Body is Type 316 stainless steel. Connections are NPT; inlet is female and outlet is male.

Pipe Size Inlet	Outlet	Lg.		
1/2	3/4	15/16"	**8537T74**	$92.31
3/4	1	1 7/8"	**8537T76**	106.82

Vacuum-Breaking Valves

- Max. Pressure:
  Water, Inert Gas, and Air: 300 psi @ 70°F
  Steam: 300 psi @ 365°F
- Temp. Range: –20° to +365°F

Protect against damage to equipment and backward flow. Valves have a spring-close design for a tight seal at near-vacuum conditions. Often used on steam coils, heat exchangers, and space heaters. Install in pipeline and tanks. Inlet is NPT male.

(E) With NPT Female Threaded Outlet

Pipe Size Inlet	Outlet	Ht.	Brass		Type 303 Stainless Steel

Elbow Vacuum-Breaking Valves

- Max. Pressure: 125 psi @ 70°F
- Temp. Range: 33° to 180°F

Prevent backward flow of dirty water in applications with intermittent flow, such as the water supply to laboratory equipment. Valves meet Uniform Plumbing Code for atmospheric discharge, are ASSE 1001 listed, and CSA certified. Connections are NPT female.

Brass Vacuum-Breaking Valves with Garden Hose Connections

- Max. Pressure: 125 psi @ 70°F
- Temp. Range: 32° to 180°F

Stop backward flow in hose and pipe that have garden hose threads (GHT). For intermittent use with water on service sinks and faucets. Body is brass. Valves meet ANSI A112.1.3, are ASSE 1011 listed, and CSA certified B64.2. Connections are 3/4 GHT; inlet is female and outlet is male.

Removable Valves—Tighten set screw to secure in place.

Tamper-Resistant Valves—Tighten set screw until the head breaks off to prevent removal. Valves can be drained.

Permanent-Mount Valves—An internal spring locks valve in place; it cannot be removed. Valves can be drained.

Mount Type	Ht.	Brass		Chrome-Plated Brass

Tamper Resistant	2"	**46605K88**	23.93	**46605K89**	35.60

Air-Release Valves & Flow-Control Orifices

For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	3

Air-Release Valves

Improve efficiency in pressurized pipelines—valves eliminate air pockets to maintain consistent flow and prevent equipment damage from water hammer. Install vertically. Connections are NPT.

(A-C) With Vented Outlet

Also known as air vents and venting valves, these are commonly used in cooling and heating systems, unless noted. They exhaust to the atmosphere.

Pipe Size, Inlet	Max. psi	Temp. Range	Ht.

Inline Bronze Air-Release Valves

- Max. Pressure: 125 psi
- Temp. Range: 40° to 240° F

Designed to prevent corrosion and increase efficiency of water lines, these valves have an internal wire brush that traps and removes even the smallest air bubbles. Often used in heating and cooling systems. Body is bronze. Valves exhaust to the atmosphere; vent is on top. Install vertically. Connections are NPT female.

Pipe Size	Lg.	Ht.

Key-Operated Brass Air-Release Valves

- Max. Pressure: 150 psi
- Temp. Range: 33° to 200° F

Add manual venting control to hot water applications, such as radiators and heaters. Turn the key to adjust flow. Valve is nickel-plated brass. Connection is 1/8 NPT male.

Valve with Key	**1813K31**	$10.00
Replacement Key	**1813K21**	2.97

Pressure-Compensating Flow-Control Orifices

Female × Female

- Max. Pressure: 200 psi
- Temp. Range: 33° to 180° F

Regulate flow to conserve water and energy. A flexible design adjusts to changing inlet pressure for consistent outlet flow. Orifices are suitable for use with drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012. Connections are NPT.

To Order: Please specify outlet flow from those listed in the table.

Flow-Control Valves for Dry Materials

- Max. Pressure: Not rated
- Max. Temp.: 230° F

Adjust the flow of dry bulk materials, such as powder, grain, and packaging. Commonly used to control flow from bins and hoppers. Rotate the handle to adjust flow; twist to lock in any position. Body is aluminum and iris-style opening is nylon.

Max. Opening Dia.	Housing Dia.	Thickness

10″	13 1/2″	1 5/8″	**8153K17**	893.75

For information about pipe size, see pages 2-3.

Flow-Control Orifices

Get high-precision control in liquid and gas applications. Also known as precision orifice valves and flow restrictors, use orifices for accurate restriction and throttling. They're commonly used to calibrate the timing of air-powered and hydraulic circuits and the speed of cylinders and actuators.

Threaded-insert orifices are often installed in manifolds to provide a precise flow rate and in air lines for slow venting.

To Order: Please specify orifice diameter from the chart.

Also Available: Orifice diameters not listed. Please ask for 2712T999 and specify the connection style, connection size, and orifice diameter desired.

Nylon Threaded-Insert Flow-Control Orifices

- Max. Pressure: 100 psi @ 75°F
- Temp. Range: 40° to 120°F

Vent, bleed, or purge your system to the atmosphere at a controlled rate. Use with water, inert gas, and air. Body is nylon. Orifices are colored for easy identification. Have a hex head. Connection is NPT male.

Brass Pressure Regulators

Reduce inlet pressure to the outlet pressure you need. Adjust the outlet pressure within the range. Body is brass. Connections are NPT female.

Styles A&B—Often used with humidifiers and air-powered tools. *Regulators with gauge port* have a 1/4 NPT female gauge port on the side. ***Style A*** have a strainer to trap debris. Diaphragm is Buna-N. ***Style B*** provide higher flow than Style A. Diaphragm is neoprene.

Style C—Suitable for low-temperature liquefied gas service of oxygen, carbon dioxide, nitrogen, and argon. Come cleaned, degreased, and bagged for oxygen service. Diaphragm is bronze.

To Order: Please specify outlet pressure range from those listed in the table.

High-Purity Cleaned and Bagged Brass Pressure Regulators

- Use with argon, nitrogen, oxygen, carbon monoxide, helium, hydrogen, neon, and xenon
- Max. Inlet Pressure: 435 psi
- Temp. Range: –40° to +165° F

Designed for use in medical and industrial applications, regulators come cleaned, degreased, and bagged to meet CGA G-4.1 standards for oxygen service. Adjust the outlet pressure within the range. Body is brass, seal is fluoroelastomer, and diaphragm is Buna-N. Regulators have two 1/4 NPT female gauge ports. Connections are NPT female.

To Order: Please specify outlet pressure range from those listed in the table.

Compact Brass Pressure Regulators

With Gauge

- Use with water
- Max. Inlet Pressure: NPT Connections: 300 psi
  Garden Hose Thread (GHT) Connections: 150 psi
- Temp. Range: 33° to 140° F

Regulate water supply to small tanks in tight spaces. Adjust the outlet pressure within the range. Body is brass and seal and diaphragm are Buna-N. *Regulators with NPT connections* have a female inlet and outlet. *Regulators with GHT connections* are IAPMO listed. Inlet is female and outlet is male.

To Order: Please specify outlet pressure range from those listed in the table.

Miniature Nickel-Plated Brass Pressure Regulators

- Use with water, inert gas, and air
- Max. Inlet Pressure: 80 psi
- Temp. Range: 32° to 180° F

Great for extremely tight spaces. Regulators are nickel-plated brass for corrosion resistance. Adjust the outlet pressure within the range. Seal is Buna-N. Mount through a panel with a 1/2″ dia. cutout. Inlet is on the bottom and outlet is on the side. *Note:* Length is the distance from the center of the inlet to the side of the regulator.

Thread Size	Outlet Pressure Range, psi	Lg.		
10-32 UNF	5-80	3/8″	**3834T51**	$15.40

Brass Low-Pressure Regulators

- Use with water and diesel fuel
- Max. Inlet Pressure: 300 psi
- Temp. Range: 0° to 120° F

Get precision regulation for low-pressure applications. Regulators have a strainer to trap debris. Adjust the outlet pressure within the range. Seal is Type 303 stainless steel and diaphragm is Buna-N coated nylon. Connections are NPT female.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe Size	Available Outlet Pressure Ranges, psi	Lg.		
1/4	0-8, 0-20, 0-50	4 1/4″	**3878T41**	$224.09

Brass High-Pressure Regulators

- Use with air, nitrogen, argon, helium, and hydrogen
- Max. Inlet Pressure: 3,500 psi
- Temp. Range: –40° to +165° F

Ideal for gas service, these regulators are suitable for inlet pressures up to 3,500 psi. They have a strainer to trap debris and a 1/4 NPT female gauge port. Adjust the outlet pressure within the range. Body is brass, seal is PTFE, and diaphragm is Type 316 stainless steel. Mount through a panel with a 1 3/8″ dia. cutout. Meet ANSI/ASME B31.3. Connections are NPT female.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe Size	Available Outlet Pressure Ranges, psi	Lg.		
1/4	0-25, 0-50, 0-100, 0-250, 0-500	2″	**3811T11**	$261.16

Brass Extreme-Pressure Regulators

- Use with air, argon, helium, and nitrogen
- Max. Inlet Pressure: 6,000 psi
- Temp. Range: –40° to +165° F

With the highest inlet pressure we offer, these regulators are rated up to 6,000 psi. They have a strainer to trap debris and two 1/4 NPT female gauge ports. Adjust the outlet pressure within the range. Seal is polyimide. Mount through a panel with a 2 1/4″ dia. cutout. Meet ANSI/ASME B31.3. Connections are NPT female.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe Size	Available Outlet Pressure Ranges, psi	Lg.		
1/4	0-500; 0-800; 10-1,500; 15-2,500; 25-4,000; 50-6,000	2 1/8″	**3950T21**	$709.82

Extended-Life Brass Pressure Regulators

- Use with water and air
- Max. Inlet Pressure: 300 psi
- Temp. Range: 32° to 180° F

Thick walls and rugged construction provide a long service life and durability in harsh environments. Regulators have a strainer to trap debris. Adjust the outlet pressure within the range. Body is brass, seal is Type 304 stainless steel, and diaphragm is ethylene propylene. Connections are NPT female.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe Size	Available Outlet Pressure Ranges, psi	Lg.		
1/2	10-40, 20-70, 71-150	5″	**4676K31**	$175.73

Bronze Pressure Regulators with Garden Hose Connections

With Gauge

- Use with water
- Max. Inlet Pressure: 150 psi
- Temp. Range: 33° to 140° F

Add pressure regulation to light duty water applications with garden hose threads (GHT). Adjust the outlet pressure within the range. Body is bronze, seal is Buna-N coated nylon, and diaphragm is EPDM. Connections are GHT; inlet is female and outlet is male.

Regulator without gauge has a 1/8 NPT female gauge port.

Pipe Size	Outlet Pressure Range, psi	Lg.	*Without Gauge*		*With Gauge*	
3/4	10-60	3″	**4000T11**	$92.42	**4000T31**	$131.00

For information about pipe size, see pages 2-3.

Plumbing-Code Bronze Pressure Regulators

- Use with drinking water
- Max. Inlet Pressure: 400 psi (unless noted)
- Temp. Range: 33° to 140° F

Ensure that your water supply conforms to plumbing standards—regulators are ANSI certified for use with drinking (potable) water in all states as of June 1, 2011. They're also ASSE 1003 listed, IAPMO listed, and CSA certified. Adjust the outlet pressure within the range. Body is bronze and diaphragm is Buna-N. Connections are NPT female.

(A&B) Lightweight Regulators—Regulators are NSF 61 certified. They have a strainer to trap debris, a UV-resistant plastic cover, and a 1/4 NPT female gauge port. Seal is Buna-N. *Style B* come with a union fitting for maintenance without detaching the pipe connection.

(C&D) Heavy Duty Regulators—An all-bronze body provides durability in harsh environments. They have an internal bypass to protect against thermal expansion. Seal is bronze. *Style D* come with a y-strainer to trap debris.

To Order: Please specify outlet pressure range from those listed.

★ Max. inlet pressure is 300 psi.

Dial-Set Bronze Pressure Regulators

- Use with water
- Max. Inlet Pressure: 400 psi
- Temp. Range: 33° to 180° F

Change your pressure without using a gauge—turn the dial to adjust the outlet pressure in 10 psi increments. Regulators have a strainer to trap debris and come with union fittings for maintenance without detaching pipe connections. Body is bronze. Seal and diaphragm are Buna-N. Regulators are CSA certified. Connections are NPT female.

Heavy Duty Bronze Pressure Regulators

- Use with: See table
- Max. Inlet Pressure:
  Water, Air, Diesel Fuel, and Natural Gas: 400 psi
  Steam: 250 psi
  Cryogenic Gas: 400 psi
- Temp. Range:
  Water, Air, Diesel Fuel, and Natural Gas: +32° to +180° F
  Steam: –20° to +400° F
  Cryogenic Gas: –320° to +150° F

Thick-walled bronze construction provides dependability in demanding environments. Regulators have a strainer to trap debris. Adjust the outlet pressure within the range. Body is bronze. Connections are NPT female.

Regulators for water, air, diesel fuel, and natural gas have a Buna-N diaphragm. *Regulators for steam* have a bronze diaphragm. *Regulators for cryogenic gas* come cleaned, degreased, and bagged for oxygen service. Diaphragm is bronze.

To Order: Please specify outlet pressure range from those listed.

Cast Iron Pressure Regulators

- Use with: See table
- Max. Inlet Pressure:
  Water, Inert Gas, and Air: 200 psi
  Steam: 150 psi
- Temp. Range:
  Water, Inert Gas, and Air: +32° to +180° F
  Steam: –20° to +400° F

A cast iron body makes these ideal for use in an existing iron piping system. Regulators have a strainer to trap debris. Adjust the outlet pressure within the range. Connections are NPT female.

Regulators for water, inert gas, and air have a Buna-N diaphragm. *Regulators for steam* have a bronze diaphragm.

To Order: Please specify outlet pressure range from those listed.

Pressure Regulators

For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2

Heavy Duty Cast Iron Pressure Regulators

- Use with: See table
- Max. Inlet Pressure: 250 psi
- Temp. Range:
  Water, Inert Gas, and Air: +32° to +180° F
  Steam: –20° to +400° F

Built tough for harsh environments, thick wall construction and a Type 420 stainless steel seal provide durability and a long service life. Adjust the outlet pressure within the range. Connections are NPT female.

Regulators for water, inert gas, and air have a neoprene/nylon diaphragm. *Regulators for steam* have a bronze diaphragm.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe Size	Available Outlet Pressure Ranges, psi	Lg.

High-Precision Cast Iron Pressure Regulators for Steam

- Use with steam
- Max. Inlet Pressure: 250 psi
- Temp. Range: 40° to 450° F

Accurate to ±1 psi, a control valve maintains pressure in steam lines. Adjust the outlet pressure within the range. Body is cast iron, seal is Type 420 stainless steel, and diaphragm is Type 301 stainless steel. Meet ANSI Class IV for tight shutoff (max. leakage rate of 0.01%). Install 1/4 NPT male pipe (not included) between the control valve and your downstream steam line. Connections are NPT female. **To Order:** Please specify outlet pressure range from those listed in the table.

Repair kits include replacement seals, diaphragm, spring, and stem assembly.

Pipe Size	Available Outlet Pressure Ranges, psi	Lg.	***Regulators***		***Repair Kits***

Stainless Steel Pressure Regulators

A

B&C

Often used with beverage dispensers, paint spraying equipment, humidifiers, and fountains, these regulators have a Type 316 stainless steel body for excellent corrosion resistance in harsh environments. Connections are NPT female.

Style A have a 1/4 NPT female gauge port.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe Size	Max. Inlet Pressure, psi	Temp. Range	Available Outlet Pressure Ranges, psi	Lg.		
(A) For Deionized Water and Diesel Fuel—*Buna-N Seal*

Quick-Response High-Precision Steel Pressure Regulators

- Use with water, inert gas, air, and diesel fuel
- Max. Inlet Pressure: 300 psi
- Temp. Range: 32° to 550° F

Get quick responses to large changes in inlet pressure without the noise of conventional pressure regulators. Adjust the outlet pressure within the range. Body is steel, seal is Type 303 stainless steel, and diaphragm is Type 316 stainless steel. Meet ANSI Class IV for tight shutoff (max. leakage rate of 0.01%). Connections are NPT female.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe Size	Available Outlet Pressure Ranges, psi	Lg.		
1/2	2-23, 10-38, 20-55, 35-160, 95-220	3 5/8″	**46395K21**	$1,189.55

1 1/2	5-20, 10-30, 20-45, 30-95, 60-160	4 7/8″	**46395K27**	2,474.63
2	5-20, 10-30, 20-45, 30-95, 60-160	5 1/2″	**46395K29**	3,038.81

Stainless Steel High-Pressure Regulators

D

E

- Use with water, inert gas, air, hydraulic oil, and diesel fuel
- Max. Inlet Pressure:
  Style D: 6,000 psi; Style E: 3,000 psi
- Temp. Range:
  Style D: 32° to 165° F; Style E: 32° to 300° F

Designed for high inlet pressures, these regulators also have a stainless steel body for corrosion resistance in harsh environments. Adjust the outlet pressure within the range. Seal is PTFE. Connections are NPT female.

Style D have two 1/4 NPT female gauge ports. Body is Type 316 stainless steel. Inlet and outlet are on the side.

Style E have a Type 303 stainless steel body. Inlet is on the side and outlet is on the bottom.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe Size	Available Outlet Pressure Ranges, psi	Lg.		
D 1/4	0-1,500; 0-2,500	2″	**4289T21**	$550.04
E 2	150-450; 250-1,200; 500-2,200	2 1/2″	**4256T16**	2,332.31

For information about pipe size, see pages 2-3.

Cleaned and Bagged Stainless Steel Pressure Regulators

- Use with inert gas, air, argon, helium, hydrogen, nitrogen, and natural gas
- Max. Inlet Pressure: 1/4 pipe size: 3,500 psi
  1/2 pipe size: 300 psi
- Temp. Range: –40° to +160°F

Suitable for use in high-purity applications, these regulators come cleaned, degreased, and bagged for oxygen service. Adjust the outlet pressure within the range. Body is Type 316 stainless steel and seal is PCTFE. Regulators have two 1/4 NPT female gauge ports. Can be surface mounted with two 10-32 UNF holes. Fasteners are not included. Connections are NPT female.

Regulators with 1/4 pipe size have a Type 316 stainless steel diaphragm; *1/2 pipe size* have a Hastelloy diaphragm.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe Size	Available Outlet Pressure Ranges, psi	Lg.		
1/4	1-30, 2-100, 5-200, 5-300	2 1/4"	8166T21	$283.26
1/2	1-30, 2-100, 5-150	2 5/8"	8166T22	486.68

Clean Room Stainless Steel Pressure Regulators

- Use with air, deionized water, oxygen, and nitrogen
- Max. Inlet Pressure: 150 psi
- Temp. Range: 41° to 140°F

Meet pollutant-free standards for clean room environments. Regulators are assembled, cleaned, and packaged in a Class 100 clean room and have a smooth finish to resist dust collection. Body is Type 316 stainless steel and diaphragm is fluoroelastomer. Can be panel mounted through a 1 1/4" dia. cutout. Connections are UNF female.

Thread Size	Outlet Pressure Range, psi	Lg.		
10-32	1.4-28	1 3/16"	4390T111	$167.82
10-32	7-99	1 3/16"	4390T112	167.82

Miniature Nickel-Plated Aluminum Pressure Regulators

- Use with water, inert gas, air, diesel fuel, and argon
- Max. Inlet Pressure: 6,000 psi
- Temp. Range: –15° to +165°F

Handy for tight spaces, these tiny regulators have a lightweight nickel-plated aluminum body and a polyimide seal for good corrosion resistance. Adjust the outlet pressure within the range. Regulators have two 1/4 NPT female gauge ports. Can be panel mounted through a 1 3/8" dia. cutout. Connections are NPT female.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe Size	Available Outlet Pressure Ranges, psi	Lg.		
1/4	0-80; 0-140; 0-220	1 5/8"	4428T23	$299.25
1/4	0-700; 0-1,200; 0-1,800	1 5/8"	4428T24	402.34

Panel-Mount Polysulfone Pressure Regulators

- Use with: See table
- Max. Inlet Pressure: 150 psi
- Temp. Range: 40° to 150°F

Regulate pressure at your instrument panel—mount through a 9/16" dia. cutout with the threads and hex nut below the knob. Adjust the outlet pressure within the range. Body is polysulfone, seal is polyurethane, and diaphragm is Buna-N/EPDM. Color is black. Connections are female.

To Order: Please specify outlet pressure range from those listed in the table.

Pipe/ Thread Size	Available Outlet Pressure Ranges, psi	Lg.		
For Air				
1/8 NPT	0.5-3.5, 0.5-10, 0.5-30, 0.5-90	1 9/16"	43275K16	$40.88
10-32 UNF	0.5-3.5, 0.5-30, 0.5-60, 0.5-90	1 3/16"	43275K36	35.07
For Air and Water				
1/8 NPT	0.5-10, 0.5-60	1 9/16"	43275K46	48.88
10-32 UNF	0.5-3.5, 0.5-10, 0.5-30, 0.5-90	1 3/16"	43275K66	43.07

Chemical-Resistant Plastic Pressure Regulators

- Use with water, hydrochloric acid, and sulfuric acid
- Max. Inlet Pressure: 125 psi
- Temp. Range:
  PVC: 40° to 140°F
  Polypropylene: 35° to 180°F

A fluoroelastomer seal and diaphragm provide good corrosion resistance for use with water and in harsh environments. Adjust the outlet pressure within the range. Color is dark gray. Connections are NPT female.

Polypropylene regulators withstand higher temperatures than PVC.

Pipe Size	Outlet Pressure Range, psi	Lg.	PVC		Polypropylene	
1/2	10-80	3"	45965K31	$354.00	45965K41	$363.00
3/4	10-80	4"	45965K32	402.00	45965K42	498.00
1	10-80	4"	45965K33	537.00	45965K43	576.00
1 1/2	10-80	5 3/4"	45965K34	756.00		
2	10-80	5 3/4"	45965K35	967.06		

Miniature Plastic Pressure Regulators

- Use with water and deionized water
- Max. Inlet Pressure: Styles A and D: 300 psi
  Style B: 150 psi
  Style C: 250 psi
- Temp. Range: 35° to 125°F

Suitable for use in food and beverage applications, these have a body made from NSF-approved materials and a seal and diaphragm made from FDA-compliant materials. Adjust the outlet pressure within the range. Color is black.

Styles A & D have three outlets to fit various pipe configurations; come with plugs for unused outlets. Body is Noryl and seal and diaphragm are Buna-N. Gauge port is 1/4 NPT female.

Styles B & C have an acetal body and EPDM seal. *Style B* have an acetal/nylon reinforced Buna-N diaphragm and 1/8 NPT female gauge port. *Style C* have a stainless steel/Buna-N diaphragm.

To Order: Please specify outlet pressure range from those listed in the table.

Connection Size	Available Outlet Pressure Ranges, psi	Lg.		
With NPT Female Connections				
A .. 1/4 NPT	0-25, 0-60, 0-125	1 9/16"	8113K11	$43.27
B .. 1/4 NPT	5-50, 5-125	1 5/8"	4545T61	26.91
With Compression Tube Fittings				
C .. For 1/4" Tube OD	1-10, 2-50, 5-100	2"	4545T51	64.31
With Push-to-Connect Tube Fittings				
D .. For 1/4" Tube OD	0-25, 0-60, 0-125	1 9/16"	8113K41	43.27

Brass Vacuum Regulators

E

F

- Use Style E with air and nitrogen
  Use Style F with inert gas, air, carbon dioxide, and nitrogen
- Temp. Range:
  Style E: –40° to +150°F
  Style F: –20° to +180°F

Maintain an accurate vacuum level in your process. Adjust the outlet vacuum within the range. Connections are NPT female.

Style E has threads and a hex nut below the knob for installation in your instrument panel. Comes with a 2" dia. gauge. Body is nickel-plated brass and seal is Buna-N. Panel mount through a 1" dia. cutout. Inlet is on the side and outlet is on the bottom.

Style F are designed to mount inline before a vacuum pump. Body is brass and diaphragm is EPR (ethylene propylene). Regulators have a 1/8 NPT female gauge port (gauge not included). Inlet is on the bottom and outlet is on the side.

Pipe Size	Outlet Vacuum Range	Lg.		
E ... 1/8	0-20" Hg	1 3/8"	4172K12	$170.21
F ... 1/4	0-15" Hg	2 1/4"	5021K14	230.25
F ... 1/4	10-30" Hg	2 1/4"	5021K24	230.25

Vacuum Regulators & Temperature-Regulating Valves

For information about pipe size, see pages 2-3.

Please Note: To choose the correct pipe size, measure the threaded inside diameter (ID) or outside diameter (OD) of your pipe or valve, round up to the nearest threaded ID or OD below, and read down to find the corresponding pipe size.

Threaded ID or OD	3/8″	1/2″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/8	1/4	1/2	3/4	1	1 1/4	1 1/2	2

Precision Brass Vacuum Regulators

- Use with inert gas, air, argon, and nitrogen
- Temp. Range: –40° to +165° F

Sensitive to changes in your system, these regulators provide high accuracy in low-vacuum applications. They have a 1/4 NPT female gauge port. Adjust the outlet vacuum within the range. Body is brass and seal and diaphragm are Buna-N. Can be panel mounted through a 1 3/8″ dia. cutout. Connections are NPT female.

Pipe Size	Outlet Vacuum Range	Lg.		
1/8	0-28″ Hg	2 1/8″	**4640T71**	$622.77
1/4	0-28″ Hg	2 1/8″	**4640T72**	622.77

Panel-Mount Polysulfone Vacuum Regulators

- Use with air
- Temp. Range: 40° to 150° F

Regulate vacuum from your instrument panel—mount with the threads and hex nut below the knob. Adjust the outlet vacuum within the range. Regulators have a polysulfone body, a Buna-N diaphragm, and an EPDM diaphragm. Requires a 9/16″ dia. panel cutout. Connections are female.

Pipe/ Thread Size	Outlet Vacuum Range	Lg.		
1/8 NPT	0-30″ Hg	1 9/16″	**41585K43**	$56.70
10-32 UNF	0-30″ Hg	1 3/16″	**41585K41**	50.55

Bronze Vacuum Regulators

- Use with air and inert gas
- Temp. Range: –20° to +180° F

A rugged bronze body provides durability for a long service life. Adjust the outlet vacuum within the range. Seal is chrome-plated bronze and diaphragm is neoprene/nylon. Connections are NPT female.

Pipe Size	Outlet Vacuum Range	Lg.		
1/2	2-30″ Hg	2 7/8″	**4710K11**	$390.59
3/4	2-30″ Hg	2 7/8″	**4710K13**	390.59

1 1/2	8-30″ Hg	5 3/4″	**4710K18**	1,229.14
2	8-30″ Hg	5 3/4″	**4710K19**	1,229.14

Bronze Temperature-Regulating Valves

With Temperature Gauge

Automate temperature control in your system without electricity—valves open and close in response to the changing temperature in your tank. Connections are NPT female. Valve body is bronze. Sensor is copper and has 8 feet of armored copper tubing. Valves come set at the minimum of the temperature range; turn the adjustment nut to change the temperature within the range.

Valves with temperature gauge display the sensor temperature. Gauge case is stainless steel. Rotates for easy viewing. Install an *optional thermowell* (sold separately) in your tank to protect the sensor and enable you to remove it without draining your system. Choose Type 316 stainless steel for greater corrosion resistance than brass.

Valves for Heating— Often used with boilers and steam tables and in washing/sterilizing applications. Also known as direct-acting valves, install between your hot water supply and tank.

Valves for Cooling— Often used to cool oil or water from heat exchangers, chillers, and compressors. Also known as reverse-acting valves, install between your cold water supply and tank.

Temperature-Regulating Valves

To Order: Please specify temperature range from the chart.

Available Temperature Ranges

Temp. Range	Sensor Lg.	Sensor Dia.	Temp. Range	Sensor Lg.	Sensor Dia.

Compact Brass Temperature-Regulating Valves

Get the same automated temperature control without electricity as our other temperature-regulating valves, but in a smaller size. Valves open and close in response to the changing temperature in your tank. Connections are NPT female. Valve body is brass. Sensor is 6 3/8″ Lg. × 5/8″ Dia. and has 6 feet of tubing. Turn the adjustment nut to change the temperature within the range.

Install an *optional thermowell* (sold separately) in your tank to protect the sensor and enable you to remove it without draining your system. Choose Type 304 stainless steel for greater corrosion resistance than brass.

Valves for Heating— Often used with boilers and steam tables and in washing/sterilizing applications. Also known as direct-acting valves, install between your hot water supply and tank.

Valves for Cooling— Often used to cool oil or water from heat exchangers, chillers, and compressors. Also known as reverse-acting valves, install between your cold water supply and tank.

Temperature-Regulating Valves

To Order: Please specify temperature range from the chart.

Available Temperature Ranges

40° to 100° F	80° to 170° F	105° to 145° F	130° to 170° F
55° to 95° F	85° to 125° F	110° to 190° F	185° to 225° F

Water Mixing Valves

- Max. Inlet Pressure: 150 psi
- Max. Inlet Temp.: 212° F

With NPT Connections

Maintain a set temperature from your water source. Valves adjust flow in response to the changing temperature of the water supply. Often used with pumps, boilers, and water heaters. Knob is lockable to prevent unintentional changes. Body is PTFE coated brass and seal is EPDM. Valves are ANSI certified for use with drinking (potable) water in all states as of April 1, 2011. They're also ASSE 1017 listed, IAPMO listed, and CSA certified.

Note: Do not use where scald protection is required.

To Order: Specify outlet temp. range: 70° to 120° F or 70° to 145° F.

With NPT Female Connections

Pipe Size	Max. Flow Rate, gpm	Lg.		
1/2	8	4 13/16″	9156K91	$113.94
3/4	12	6 1/2″	9156K92	118.84
1	16	7″	9156K93	136.50

With Solder-End (Unthreaded) Connections

Tube Size★	Actual Tube OD	Max. Flow Rate, gpm	Lg.		
1/2	5/8″	8	4 3/8″	9156K64	$119.01
3/4	7/8″	12	4 7/8″	9156K65	114.44

★ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

Low-Flow Water Mixing Valves

- Max. Inlet Pressure: 150 psi
- Max. Inlet Temp.: 180° F

Set a maximum temperature at low-flow faucets and fixtures to protect against scalding. Valve adjusts flow in response to the water supply temperature. Knob is lockable to prevent unintentional changes. Comes with an adapter for installation on a two-handle sink.

Max. flow rate is 3 gpm. Outlet temp. range is 80° to 110° F. Body is bronze and seal is EPDM. Length is 3 1/2″. Valve is ANSI certified for use with drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012. It's also ASSE 1070 listed. Connections are compression tube fittings for 3/8″ tube OD.

5847T75 ..... $78.68

Manual-Adjustment Water Mixing Valves

- Max. Inlet Pressure: 125 psi
- Max. Inlet Temp.: 180° F

Adjust water temperature with the turn of a dial. This valve is for use with faucets with a constant inlet temperature and pressure. Tighten the set screw on the dial to prevent unintentional temperature changes. It has check valves to stop backward flow.

Max. flow rate is 2 gpm. Outlet temp. range is 40° to 175° F. Body is chrome-plated brass. Length is 2 3/16″. Valve is for use with drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012. CSA B125 certified. Connections are compression tube fittings for 3/8″ tube OD.

Note: Do not use where scald protection is required.

9158K11 ..... $37.18

Water Mixing Valves for Eye- and Face-Wash Stations

- Max. Inlet Pressure: 125 psi
- Max. Inlet Temp.: 180° F

Meet standards of temperature control for emergency washing equipment. Designed for use with eye wash and shower stations that meet ANSI Z358.1, these valves provide at least 15 minutes of constant water flow. When hot water fails, valves allow uninterrupted cold water flow. When cold water fails, valves stop hot water flow. Outlet temp. range is 60° to 95° F. Body is bronze. Valves are ASSE 1071 listed. Connections are NPT female.

Pipe Size Inlet	Pipe Size Outlet	Flow Rate Range, gpm	Lg.		
1/2	1/2	1-12.3	7 3/4″	6208T14	$529.12
3/4	1	3-46.5	11 11/16″	6208T15	905.36
1 1/4	1 1/2	3-118	16″	6208T16	1,566.63

Flow-Compensating Water Mixing Valves

- Max. Inlet Pressure: 125 psi
- Max. Inlet Temp.: 200° F

Reduce the hot water flow from pumps and water heaters when your cold water supply fails. Valves maintain a set temperature; they adjust in response to the water supply temperature. Integral check valves with screens stop backward flow and trap debris. Body is bronze. Valves are ASSE 1017 listed and CSA B125 certified. Connections are NPT female.

Note: Do not use where scald protection is required.

To Order: Specify outlet temp. range: 60° to 90° F or 90° to 160° F.

Pipe Size Inlet	Pipe Size Outlet	Flow Rate Range, gpm	Lg.		
3/4	3/4	3-42	9 1/8″	7827K61	$545.23
3/4	1	4-64	9 1/8″	7827K63	622.06
1 1/4	1 1/4	5-110	12 5/8″	7827K64	745.63
1 1/4	1 1/2	7-144	12 5/8″	7827K66	941.85

Steam and Water Mixing Valves

- Max. Inlet Pressure: 80 psi
- Max. Inlet Temp.: 240° F

Get instant hot water. This valve mixes steam and cold water to maintain the temperature you need. It adjusts flow in response to the water supply temperature. Integral check valves with screens stop backward flow and trap debris.

Flow rate is 13-25 gpm. Outlet temp. range is 60° to 180° F. Body is bronze. Lg. is 12″. Connections are 3/4 NPT female.

Note: Do not use where scald protection is required.

4714K2 ..... $638.38

Steam and Water Mixing Valves with Hose Rack

- Max. Inlet Pressure:
  Steam: 80 psi
  Water: 125 psi
- Max. Inlet Temp.: 240° F

For Automatic Mixing

Mix hot water or steam with cold water to get to your desired temperature. Each valve includes two ball valves for manual control of the water supply and a dial thermometer to display the outlet temperature. An integral vacuum breaker and check valves stop backward flow. Outlet temp. range is 60° to 180° F. Hose rack is Type 302 stainless steel. Inlets are 3/4 NPT female and outlet is 3/4 garden hose thread (GHT) male.

Valves for manual mixing provide independent control over hot and cold water supply. Hose rack mounts to valve. *Valve with safety-shut-off* stops flow automatically when the cold water supply fails.

Valve for automatic mixing maintains your set temperature. It adjusts flow in response to the water supply temperature. Hose rack mounts to wall.

Note: Do not use where scald protection is required.

Mixing Valves with Hose Rack

Valve Body Material	Max. Flow Rate, gpm	Lg.		
For Manual Mixing				
Chrome-Plated Bronze	9	6″	3062K9	$891.65
Type 316 Stainless Steel	7	6″	3062K31	1,086.72
For Manual Mixing with Safety-Shut-Off				
Bronze	7	6″	3062K51	1,314.90
For Automatic Mixing				
Chrome-Plated Bronze	9	7 1/2″	3062K29	1,455.36

Optional 50-Ft. Hose with Fittings

Hose has a 3/4 GHT female inlet. Both are cream-colored EPDM rubber and have a trigger spray nozzle. Max. temp. is 180° F @ 200 psi.

With Bronze Nozzle	3062K55	$462.07
With Type 303 Stainless Steel Nozzle	3062K77	566.88

About Selecting a Mixer

Consider the following when selecting a mixer:

Power Source— Choose an air-powered or an electric mixer.

Air-powered mixers are typically run on plant air and have variable speed control using the control valve included with each mixer. And since they don't have an integral motor they can't be overloaded, won't create sparks, and are lighter than electric mixers of equal horsepower.

Electric mixers are more cost-efficient than air-powered mixers that run on plant air.

Horsepower— You need a motor that's strong enough to mix your material. When in doubt, choose a motor with a higher horsepower to avoid overloading. For mixing low-viscosity (thin) materials in containers of 25-gal. or less, consider mixers with 1/4 hp or smaller.

Speed— *High-speed mixers* are ideal for quick mixing of low-viscosity (thin) materials. They have direct-drive motors. *Low-speed mixers* are ideal for high-viscosity (thick) materials. They have gear-drive motors.

Viscosity (centipoise)— Refers to the thickness of your material, or its resistance to flow. It's often measured in centipoise.

Viscosity, centipoise	Example	HORSEPOWER OF MIXER Tank Size (gallons) 25	50	100	500	1,000	2,000	3,000
1	Water	1/4	1/4	1/4	1/3	1/3	1/3	1/3
100	Olive Oil	1/4	1/3	1/3	1/3	1/3	1/3	1/2
500	Paint	1/3	1/3	1/3	1/3	1/2	1	1 1/2
1,000	Castor Oil	1/3	1/3	1/3	1/3	3/4	1 1/2	2
3,000	Liquid Soap	—	1/3	1/3	3/4	1 1/2	3	—
5,000	Honey	—	1/3	1/3	1	2	3	—
15,000	Molasses	—	1/2	1/2	3	—	—	—

■ High speed recommended. ▒ Low speed recommended.

Air-Powered Mixers

Clamp-Mount Air-Powered Mixers

High Speed Single Propeller

Clamp these mixers to the side of large containers and tanks. The shaft and propellers are Type 316 stainless steel; they are removable. Propellers move clockwise when viewed from above.

Also Available: Replacement shafts, propellers, and clamps. Please ask for 34685K1 and specify part required and the McMaster-Carr part number.

Flange-Mount Air-Powered High-Speed Mixers

Dual Propeller

The flange mount on these mixers makes them ideal for secure attachment with minimal vibration on a tank or drum. The shaft and propellers are Type 316 stainless steel; they are removable. All have six mounting holes (fasteners not included).

Single-propeller mixers can be set to move clockwise or counterclockwise.

Dual-propeller mixers move material in opposing directions for increased flow compared to mixers that move material in one direction.

Also Available: Replacement shafts and propellers. Please ask for 34705K1 and specify part required and the McMaster-Carr part number.

Stand-Mount Air-Powered Mini Mixers

High Speed with Optional Stand

A shorter shaft allows these mixers to get into tight spaces. All include a 9/16″ Dia. × 10″ Lg. bar for mounting on the optional stand (sold separately).

Mixers have a Type 316 stainless steel shaft and propeller; they are removable. The propeller moves clockwise when viewed from above.

These mixers operate on 13 cfm at 80 psi air consumption. Air inlet is 1/4″ NPT female; a 4-ft. air hose is included.

Optional stand includes a swivel connector.

hp	Speed, rpm	Shaft Lg.	Shaft Dia.	Prop. Dia.		
High Speed						
1/3	1,000-10,000	12″	3/8″	2 1/2″	3498K71	$307.23

1/3	30-170	12″	3/8″	2 1/2″	3498K91	635.85
Optional Stand					35265K11	319.95

Hand-Held Air-Powered High-Speed Mixers

Convenient for small batches, use this hand-held mixer in small pails, buckets, and drums without a mounting clamp or stand.

Mixers have a Type 304 stainless steel shaft with a built-in propeller. The shaft is removable; for replacement shafts with propellers, see page 512. The propeller moves clockwise when viewed from above.

Mixers operate on 25 cfm at 80 psi air consumption. Air inlet is 1/4″ NPT female.

3489K51 is ideal for 1- and 2-gal. containers; *K52* for 5- and 10-gal. containers; and *K53* for 55-gal. containers.

hp	Speed, rpm	Shaft Lg.	Shaft Dia.	Prop. Dia.		
1/2	300-3,000	15″	1/4″	2 5/8″	3489K51	$458.32

1/2	300-3,000	40″	1/2″	5″	3489K53	577.41

For information about selecting a mixer, see page 506.

Air-Powered High-Speed Drum Mixers

Collapsible propellers allow you to insert this mixer into a 55-gal. drum without removing the lid. Mixers fit into a standard 2″ bung opening, except 3476K71, which fits into a 1½″ bung opening. The shaft and propellers are Type 304 stainless steel (unless noted) and are removable. Propellers move clockwise when viewed from above.

Hand-held mixers let you manually direct mixing for maximum effectiveness. Recommended for thin materials where operator monitoring of the mixing process is desirable.

Bung-mount mixers screw into the opening of a drum for hands-free mixing. *35005K71* comes with an attached clamp to reduce vibration during operation.

Clamp-mount mixers clamp onto a container wall or drum lip.

●Shaft and propeller are Type 316 stainless steel.

Easy-Mount Air-Powered High-Speed Mixers

Get the right configuration for your job. These mixers are available with a pipe-clamp mount, c-clamp mount, or stand mount. Propellers are Type 316 stainless steel. The shaft and propellers are removable and move clockwise when viewed from above. Mixers operate on 25 cfm at 80 psi air consumption and have a ¼″ NPT female air inlet.

Single-Propeller Mixers— Come with four shafts; lengths are listed in the table below. Shafts are Type 304 stainless steel.

Dual-Propeller Mixers— Have one Type 316 stainless steel shaft with adjustable propellers.

Pipe-clamp-mount mixers mount to 1½″ dia. vertical pipe (not included).

C-clamp-mount mixers mount to the side of a tank or container.

Stand-mount mixers include a heavy aluminum base and a swinging arm that can be fixed at any height along the ¾″ dia. upright support.

Pipe-Clamp Mount (Pipe not included)

Stand Mount Single Propeller

Intermediate Bulk Container High-Speed Mixers

Mixers are mounted to a nonadjustable 39½″ wide bracket that fits the opening of intermediate bulk containers (not included, see 3783K21 on page 1719). The mixer is bolted to the bracket, securing the mixer in place and keeping the propeller centered in your container. Shaft and propellers are Type 316 stainless steel; both are removable. Propellers move clockwise when viewed from above.

Electric Mixer— Has a totally enclosed, fan-cooled (TEFC) motor and 4″ wire leads.

Air Powered Single Propeller

Self-Contained Air-Powered High-Speed Mixers

Great for small batches, these are built into a container for easy mixing and dispensing. Containers have a dispensing valve. A locking ring holds the cover in place.

Mixers have a Type 304 stainless steel shaft with a Type 316 stainless steel propeller; both shaft and propeller are removable. The propeller moves clockwise when viewed from above.

Mixers operate on 20 cfm at 80 psi air consumption. Air inlet is ¼″ NPT female; a 10-ft. air hose is included.

5-gal. Steel

Also Available: Replacement lids, containers, locking rings, shafts, and propellers. Please ask for 3513K1 and specify part required, container size, and container material.

Container Size	hp	Speed, rpm	Shaft Lg.	Shaft Dia.	Prop. Dia.		
Steel Container							
5 gal.	½	0-2,000	10″	½″	5″	**3513K11**	$558.97
10 gal.	½	0-2,000	12″	½″	5″	**3513K12**	638.82
Type 316 Stainless Steel Container							
5 gal.	½	0-2,000	10″	½″	5″	**3513K21**	944.76
10 gal.	½	0-2,000	12″	½″	5″	**3513K22**	1,079.63

Clamp-Mount Variable-Speed Electric Mixers

With adjustable speed control, these electric mixers can tackle a variety of material thicknesses. A simple clamp-mount makes them easy to attach to most tanks and containers. Come with a high-flow propeller; the blades are designed for better flow efficiency with thicker materials than conventional propellers.

Shaft and propeller are Type 316 stainless steel; both are removable. The propeller moves clockwise when viewed from above. Mixers have a totally enclosed, nonventilated (TENV) motor and a 6-ft. power cord with three-prong plug.

¼	20-350	48″	¾″	10″	115 (1)	1.3	**3475K73**	2,343.15

For information about selecting a mixer, see page 506.

Clamp-Mount Electric Mixers

High Speed Standard Single Propeller

High-Flow Dual Propeller

The large adjustable clamp on these mixers makes them ideal for attaching to your container wall. The shaft and propeller are Type 316 stainless steel and are removable. Propellers move clockwise when viewed from above. All have a totally enclosed, fan-cooled (TEFC) motor except hazardous-location mixers. Mixers have 4″ wire leads, unless otherwise stated.

Light Duty Mini Single-Propeller Mixers—Have a thin shaft, small propeller, and low horsepower for small batches of thin materials. Mixers have a 6-ft. power cord with three-prong plug.

High-Flow Propeller Mixers—Come with a high-flow propeller; the blades are designed for better flow efficiency with thicker materials than standard propellers.

Hazardous-Location Mixers—Motor is UL listed for Class I, Groups C and D and Class II, Groups F and G locations.

Also Available: Replacement shafts, propellers, and clamp assemblies. Please ask for 3473K1 and specify part required and the McMaster-Carr part number.

▲Motor is 50 Hz; speed is 1,425 rpm.

Drum-Mount Electric High-Speed Mixers

Mix the contents of a 55-gal. drum without removing the lid—the 3 3/4″ dia. propeller on these mixers collapses to fit through a standard 2″ bung opening.

Mixers are 1/2 horsepower with a speed of 1,750 rpm. All operate on 115/230 VAC, 60 Hz at 8/4 amps. Motor is single phase. The shaft and propeller are Type 316 stainless steel; both are removable. Propeller moves clockwise when viewed from above. Mixers have 4″ wire leads.

Standard mixers have a totally enclosed, fan-cooled (TEFC) motor.

Hazardous-location mixer with bung mount has a motor that is UL listed for Class I, Groups C and D and Class II, Groups F and G locations.

Hazardous-location mixer with clamp mount has a motor that is UL listed for Class I, Group D and Class II, Groups F and G locations.

Bung-Mount Mixers—Screw into a standard 2″ female bung opening.

Clamp-Mount Mixers—Clamp onto a container wall or drum lip.

	Shaft Lg.	Shaft Dia.	Standard		Hazardous Location	
Bung Mount	29″	5/8″	3484K59	$782.03	3484K48	$1,147.11
Clamp Mount	33 1/8″	5/8″	3492K75	820.70	3492K88	1,167.93
Replacement Propeller			3484K78	$100.53		

Stand-Mount Electric Variable-Speed Mini Mixers

34745K71 with Optional Stand

With small propellers, a small motor, and a thin shaft, these mixers are perfect for your small mixing jobs. And with adjustable speed, you'll be able to handle changing viscosities. The shaft and propeller are Type 316 stainless steel and are removable. Mixers have a totally enclosed, nonventilated (TENV) motor and a 6-ft. power cord with three-prong plug.

The propeller moves clockwise when viewed from above. Mixers include a 9/16″ Dia.×10″ Lg. aluminum rod for mounting to a stand (sold separately below).

Optional stand includes a swivel connector. Mixers can be mounted anywhere along the support.

hp	Speed, rpm	Shaft Lg.	Shaft Dia.	Prop. Dia.	VAC @ 60 Hz (Phase)	Amps		
1/15	0-2,000	12″	3/8″	2 1/2″	120 (1)	0.8	34745K71	$517.68

Optional Stand							35265K11	319.95

Blenders

1 liter

Great for grinding small batches of powder, combining multiple liquids, and creating slurries. All blenders include speed control, a Type 304 stainless steel container, stainless steel blades, a plastic cover, and a 6-ft. power cord with three-prong plug. UL listed.

1-liter blenders have a die cast zinc housing with an epoxy finish. *64-oz. blender* has a polycarbonate housing.

Also Available: Replacement covers and container and cover sets. Please ask for 34985K1 and specify part required.

Capacity	No. of Speeds	Max. Speed, rpm	VAC @ 50/60 Hz (Phase)	Amps		
1 liter	1	22,000	115/120 (1)	3.6	34985K73	$298.74
1 liter	2	22,000	115/120 (1)	3.6	34985K74●	463.83
64 oz.	2	24,300	115/120 (1)	7.5	34985K75	553.86

●Includes a 3-minute timer.

For information about selecting a mixer, see page 506.

Compact Air-Powered Paint Shaker

Mount this shaker to your bench top and stop mixing by hand. It shakes aerosol, pint, quart, and gallon cans 700 times per minute. Operates on 4.3 cfm at 70 to 150 psi air consumption. Air inlet is 1/4″ NPT female. Shaker is rated for continuous duty. The base and can basket are aluminum. Shaker must be mounted to a bench top or the optional pedestal stand before operation; includes four 3/8″ machine bolts for mounting.

Optional maintenance kit includes a bushing, a wear ring, an air hose, hose clamps, and O-rings.

Also Available: Replacement parts. Please ask for 9593T777 and specify part required.

Maximum Container Weight Cap.	Ht. × Dia.	O'all Size, Ht. × Wd. × Dp.		
16 lbs.	10 1/4″ × 7″	14″ × 8″ × 10 1/2″	9593T41	$560.20
Optional Steel Pedestal Stand			9593T12	84.41
Optional Maintenance Kit			9593T13	52.48

Tabletop Vibrating Electric Shakers

10-lb. Capacity

Delivering 3,600 vibrations per minute, these shakers handle your tamping and mixing jobs. All have a single phase motor that operates on 120 VAC at 60 Hz. Include a 5 1/2-ft. power cord with three-prong plug.

8-lb. capacity table is rated for intermittent duty; maximum of 15 minutes on with a minimum of 5 minutes off between cycles. Housing is aluminum with a rubber-covered steel platform.

10-lb. capacity table is rated for continuous duty. Housing is aluminum with a plastic platform.

Weight Cap.	Platform, Wd. × Dp.	Amps	O'all Size, Ht. × Wd. × Dp.

Mix paints in their containers with the lid intact for a neat and easy job.

(A) Shakes with side-to-side, up-and-down, and circular motions 1,050 times per minute. Has a 15-minute timer and a 7-ft. power cord with three-prong plug. Rated for continuous duty. Shaker is steel with three rubber footpads; it is not designed for mounting.

Also Available: Replacement parts. Please ask for 7828T888 and specify part required.

(B&C) Mix contents of large containers with 370 shakes per minute. All have a 10-ft. power cord with three-prong plug. Rated for intermittent duty; 80% duty cycle with a max. "on" time of 60 minutes. Housing is cast iron with four 7/16″ holes for floor mounting (fasteners not included). Motor is UL listed. *Style B* has a 30-minute timer. *Style C* meets Class 1, Group D for hazardous locations.

(D&E) Mix two cans simultaneously at 570 shakes per minute. Rated for intermittent duty; 80% duty cycle with a max. "on" time of 60 minutes. Housing is steel. Base has three 3/8″ holes for mounting to a bench top (fasteners not included). Motor is UL listed. *Style D* has a 30-minute timer and a 10-ft. power cord with three-prong plug. *Style E* meets Class 1, Group D for hazardous locations. It has 18″ wire leads.

★ Maximum is for a single container; shaker holds two containers.

No-Mess Electric Drum Mixers

(Drum Not Included)

Mix large batches without the mess, while ensuring materials at the bottom of the drum are equally incorporated. Simply put your covered drum (not included) on the mixer and turn it on. Mixers accept 15-, 30-, and 55-gal. steel drums; add the optional attachment for mixing 1- and 5-gal. cans.

Mixers have a variable-speed control that lets you rotate a 55-gal. drum at 10 to 24 rpm. They can handle dry loads up to 400 lbs. at 10 rpm; 300 lbs. at 20 rpm; and 250 lbs. at 24 rpm. They also handle liquid loads up to 500 lbs. at any rpm.

All mixers have a 1/2-hp motor with thermal overload protection, a chain and guard, and a grounding strap. They also have four 3″ dia. casters for mobility and an integral handle that allows the mixer to be tilted for drum changes. Mixers are 20″ Ht. × 35″ Wd. × 21″ Dp. UL listed. Shipped assembled.

Mixer with totally enclosed, fan-cooled (TEFC) motor has a 6″ power cord with three-prong plug and an on/off switch.

Mixer with hazardous-location motor meets Class I, Group D and Class II, Groups F and G. Mixer has 5″ wire leads.

Motor Style	VAC @ 60 Hz (Phase)	Amps		
TEFC	115 (1)	7.4	2889T12	$2,010.23
Hazardous Location	115/230 (1)	7.4/3.7	2889T17	2,225.41
Optional Attachment for 1-gal. and 5-gal. Cans			2889T16	128.79
Replacement 4″ Drive Wheel for Attachment			2889T19	55.05

Easy-Pour Electric Drum Mixers

Mobile

Stationary

With a handle and an adjustable drum, you can set your mixing angle for the best mix and an easy pour. Both have a steel frame and 5.5 cu. ft./41-gal. drum with a mixing capacity of 3 cu. ft./22-gal. The drum is 24″ dia. at the widest point, 15 1/4″ dia. at the opening. Both mixers are 48″ Ht. × 46″ Wd. × 30″ Dp. and include a 1-ft. power cord with three-prong plug. Shipped assembled.

Mobile Mixer— Furnished with two 10″ semi-pneumatic wheels for hand towing (not designed for vehicle towing). Mixing drum comes with two blades and two mixing paddles that are replaceable.

Stationary Mixer— Includes a seamless polyethylene liner with molded blades that's easy to clean and is replaceable.

	hp	Speed, rpm	VAC @ 60 Hz (Phase)	Amps		
Mobile	1/3	22-25	115 (1)	5.9	7666T13	$1,981.95
Stationary	1/3	22-25	115 (1)	5.9	7595T12	1,729.80
Replacement Drum Liner for Stationary Mixer					7595T22	216.46

For information about selecting a mixer, see page 506.

Compact Electric 5-Gallon Pail Mixer

Mix and carry your batch away in the same container. The bucket rotates at 60 rpm while a motionless mixing paddle stirs things up. Complete mixer includes a 1/4-hp motor, 5-gal. metal bucket, lid, 3/4″ Dia.×10 3/4″ Lg. shaft with mixing paddle, stand, and an 8-ft. power cord with inline switch and three-prong plug. Overall size is 24″ Ht.×16″ Wd.×13″ Dp. Mixing capacity is 5 gal. for fluids and 50 lbs. for cement. Shipped assembled.

	VAC @ 60 Hz (Phase)	Amps		
Complete Mixer	110 (1)	5	7658T11	$564.11
Replacement Paddle			7658T12	50.51
Replacement Bucket with Lid			7658T1	44.23

Drum-Mount Proportional Mixers

Mix and dispense in one step. Simply attach your water line to the inlet of these mixers and simultaneously draw from drum contents to mix. The ratio of your mix is adjustable. Mixers fit 15- to 55-gal. drums with 2 1/2″ dia. bung openings. Water line connection has a quarter-turn shutoff valve.

PVC Mixer for Soap and Water

Use the metering screw to adjust soap-to-water ratio from 1 oz.:1 gal. to 30 oz.:1 gal. Water inlet connection is 3/4″ GHT (garden hose thread) female. Intake tube is vinyl and 42″ long. Discharge connection is 1/2″ OD hose barb. Discharge hose is vinyl and 3-ft. long. Min. inlet pressure is 10 psi. Max. pressure is 125 psi at 70° F.

Flow Rate	Max. Temp.		
5 gallons/minute	160° F	3478K51	$80.12

Brass Mixers for Coolant or Soluble Oil and Water

A needle valve dial allows you to adjust the water-to-oil ratio. Intake tube is galvanized steel and 3-ft. long. Water inlet connection is 3/8″ NPT female. Discharge connection is 1/2″ NPT male. Min. inlet pressure is 25 psi. Max. pressure is not rated.

Flow Rate	Water-to-Oil Ratio	Max. Temp.		
3 gallons/minute	3:1 to 15:1	150° F	9977K3	$221.85
3 gallons/minute	15:1 to 45:1	150° F	9977K1	221.85

Tee-Fitting Proportional Mixers

The internal tapered design on these tees creates a vacuum to draw oxygen, steam, or fluid into your mixture for aeration or blending. Tees are cast iron. Max. pressure is 125 psi at 70° F.

Pipe Size, NPT	Max. Temp.	O'all Lg.		
1/2″ Female	406° F	3 3/4″	4563K61	$53.60
3/4″ Female	406° F	5″	4563K62	60.66
1″ Female	406° F	5 5/8″	4563K63	63.93

Porcelain Mortars and Pestles

OD	Mortar		Pestle	
3 1/8″	43095T52	$18.50	43095T62	$19.41
5 1/8″	43095T53	45.21	43095T63	30.87
8 1/4″	43095T54	181.04	43095T64	85.44

Mixing Nozzles

Keep the mixture in your containers uniform by pumping it through these nozzles, also known as eductors. The mixing action is created by their shape—as 1 gallon flows in through the inlet, suction draws approximately 4 gallons from your tank for mixing. This action keeps your mixture circulating and prevents particles from settling.

Nozzles are made of durable glass-reinforced polypropylene for corrosion and chemical resistance. Connection is NPT male. Max. pressure is 50 psi at 70° F.

Pipe Size	Max. Temp.	Dia.×Lg.		
1/4″	200° F	1 1/4″ × 3″	8328K11	$33.66
3/8″	200° F	21/16″ × 4″	8328K12	38.40

Inline Pipe Mixers

PVC

Also known as static mixers, these mixers require no power source to mix the materials in your process. They have no moving parts, are maintenance-free, and are simple to install with NPT male connections. Internal spiral blades turn fluids in your pipeline in opposite directions for thorough, homogenous mixing with no back pressure.

$$Re = \frac{3{,}157(Q)(S)}{\mu D}$$

Where: Q=flow rate (gpm)
S=specific gravity
μ=viscosity (centipoise)
D=pipe ID (inches)

Re (Reynolds Number)	Required Blades
> 1,000	6
500–1,000	12
500–2,000	18

Use this formula to determine if you need a 6-, 12-, or 18-blade mixer.

Nylon mixers are made of nylon pipe and brass fittings with acetal blades. They're ideal for mixing water-based liquids, common solvents, and adhesives.

PVC mixers are made of clear PVC for monitoring the mixing process. Use to dilute mixtures such as polymers and flocculants in water treatment, pH control, and chlorination operations.

Stainless steel mixers are Type 304 stainless steel and are ideal for wastewater treatment and chemical processing.

★ Comes with 18 blades.

Inline Tube Mixers

(Cut-Away View)

A series of internal blades are permanently mounted inside these tubes to mix everything from thin liquids to thick resins. Materials are mixed as they pass over the blades, so no external power source is required. Both the housing and the blades are Type 316 stainless steel. Max. temp. is 1000° F.

Mixers have plain ends and are easy to install—simply secure them into your process line with compression or push-to-connect fittings (not included). *Note:* When mixing two thick liquids, use two 21-blade mixers.

Air Bubbler

Also known as a diffuser, use this air bubbler to introduce air into your tank for aeration and oxygenation. It is easily incorporated into your system, just connect your compressed air supply to the 1/2″ NPT male connection. Air bubbler is ABS plastic with a clog-resistant rubber diaphragm. Bubbler is 5″ Dia.×4 1/2″ Lg. and has a max. air pressure of 5 psi at 70° F.

3699K36 ..... $27.46

Aerators

Mix the contents of your tank while oxygenating your mixture. Aerators include a rubber air bubbler (also known as a diffuser), which provides more uniform bubble distribution for more consistent oxygenation. Also include an air pump and PVC hose. Operate on unfiltered, nonlubricated air. Max. pressure is 3.5 psi at 70°F. Max. water depth is 6 feet. Overall size of air pump is 6 11/16″ Ht.× 8″ Wd.×5 7/16″ Dp. Come with a 6-ft. power cord with three-prong plug. Rated for continuous duty.

Hose Lg.	VAC @ 60 Hz (Phase)	Amps

20 ft.	120 (1)	0.3	3555K28	310.34

Injectors

Retractable

Nonretractable

Inject liquids directly into your process line or tank without draining your system. The injector tube has a 6″ insertion length. Process connection and inlet connection are NPT male. Seal is EPDM, except 3347K42, K44, K52, and K54, which have a chemical-resistant fluoroelastomer seal.

Retractable injectors, also known as corporation stops, have a ball valve so you can remove the injector without disturbing your process.

Nonretractable injectors, also known as injection quills, are for permanent installation in your tank. These are ideal for injecting chemicals in your boiler, cooling tower, and other water treatment applications.

All injectors with CPVC and PVC injector tubes can be cut to the length you need within the 6″ cuttable range.

Stainless Steel Propellers

Left Hand

Suitable for standard mixing applications, these corrosion-resistant Type 316 stainless steel propellers include two stainless steel set screws to attach to your mixing shaft. They have a relatively flat blade angle for smooth, even mixing.

Selecting a Left-Hand or a Right-Hand Propeller

Most mixers require a left-hand propeller. To determine whether you need a left- or right-hand propeller, view your propeller from the side. As pictured below, the blades of a left-hand propeller point up to the left. The blades of a right-hand propeller point up to the right.

On most mixers, the shaft and propeller move clockwise when viewed from above. Using a left-hand propeller pushes material down into your container.

Prop. Dia.	Bore Size	Left Hand		Right Hand

Super-Mixing Stainless Steel Propellers

With more steeply angled blades, these Type 316 stainless steel propellers deliver 50% more mixing action and require greater horsepower to operate than standard propellers of the same diameter. Propellers include two stainless steel set screws to attach to your mixing shaft; all are left hand.

Prop Dia.	Bore Size			Prop Dia.	Bore Size

High-Flow Stainless Steel Propellers

Also known as hydrofoil propellers, these are designed to produce high flow at low speeds (40% higher flow than conventional propellers). They are most effective when used with thin mixtures and low-speed mixers. All are Type 316 stainless steel, have two stainless steel set screws to attach to your mixing shaft, and are left hand.

Prop. Dia.	Bore Size			Prop. Dia.	Bore Size

Mixing Attachments for Power Tools

Turn your power tool into a mixer with these versatile attachments. Select a shaft diameter that will fit into the chuck of your power tool.

***A** Coiled Spring Attachments*—The coil design generates a centrifugal force that requires about 50% less speed than a propeller to achieve the same mixing results. Made of Type 304 stainless steel, these attachments have rounded ends to prevent damage to plastic containers. Use in viscosities up to 12,000 centipoise (similar to molasses).

For Container Cap., gal.	Coil Lg.	Shaft Dia.	Shaft Lg.	Max. rpm

Mixing Blades

High *Medium*

Incorporate cutting action while mixing materials with solid particles. Blades and shafts are sold separately.

Mixing blades are Type 304 stainless steel. All have a 1/2″ bore size. *High-speed blades* have shallow teeth that allow them to operate at very high speeds. *Medium-speed blades* have teeth that are set at a steeper angle to power through thicker materials.

Shaft assemblies are Type 303 stainless steel and fit a 1/2″ bore. They come with a stepped washer and nut.

Air-Powered Bin Aerator

Create flow in your bin or hopper—this aerator combines vibration and aeration to dislodge and convey compacted materials. It's especially effective for granular, powdery, and abrasive materials. Aerator operates on a 5 to 60 psi air supply and has a 1/4″ NPT female air connection. Body consists of a durable 4″ diameter white silicone pad mounted on a threaded stainless steel center shaft. Mounting hole size is 15/16″; comes with mounting hardware. Rated for continuous duty.

Install the aerator directly through a hole in your bin or hopper wall above the container outlet. For best results, mount several aerators together in rows set 6″ to 18″ apart.

59145K12 ..... $40.35

Electric Vibrating Feeders

Don't worry about sizing the right vibrator to your feeder, these have a built-in vibrator. Ideal for controlling bulk material input in feeding, mixing, grinding, and packaging operations. Vibrating feeders are electromagnetic so there are no mechanical parts to wear out and no need for lubrication. They're quiet, too—at just 60 dB, their noise level is similar to normal conversation. Vibrating feeders and required controller are sold separately. All feeders are dust resistant and rated for continuous duty. Body is steel. Troughs come mounted to the vibrating drive unit. Max. operating temp. is 150° F. All have a 10-ft. cable with 2″ wire leads. CSA certified. 58815K18 and *K17* are splash resistant.

Feeders with a ***Type 304 stainless steel trough*** are great for use in food and pharmaceutical applications.

Required controller (sold separately) is necessary to operate feeders and is for use indoors. It has adjustable speed control and operates on 115 VAC with screw terminal connections. Has two 7/32″ mounting holes (fasteners not included).

About Selecting a Vibrator for Bins and Hoppers

Choose a low-impact or high-impact vibrator depending on your application. The vibration intensity given in the tables below is an index we've created based on bulk materials with densities less than 75 lbs. per cubic foot. *Note:* If your material has a density greater than 75 lbs. per cubic foot, choose a vibrator with the next greater intensity.

Densities of Common Materials

Material	Density	Material	Density
Grain	27 lbs./cu. ft.	Coal	52 lbs./cu. ft.
Flour	37 lbs./cu. ft.	Fine Salt	75 lbs./cu. ft.
Asphalt	45 lbs./cu. ft.	Sand	100 lbs./cu. ft.

Low-Impact Vibrators— Ideal for maintaining a steady flow of material through your bin or hopper, these rotary motion vibrators produce high-frequency vibration. To choose the correct low-impact vibrator for your application, find the volume of the sloped portion of your container; then read down to find the approximate output force required and the corresponding vibration intensity.

Volume (Sloped Portion of Bin)	1 cu. ft.	2 cu. ft.	7 cu. ft.	20 cu. ft.	35 cu. ft.	50 cu. ft.	100 cu. ft.	200 cu. ft.	400 cu. ft.
Approximate Force Required	15 lbs.	40 lbs.	100 lbs.	200 lbs.	400 lbs.	600 lbs.	1,000 lbs.	1,500 lbs.	2,000 lbs.
VIBRATION INTENSITY	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**

High-Impact Vibrators— Ideal for dislodging materials that get stuck, caked, or form voids in your bin or hopper, these linear motion vibrators produce a sharp pounding, similar to striking a sledgehammer against the bin wall. To choose the correct high-impact vibrator for your application, find the wall thickness of your bin; then read down the column to find the approximate output force required and the corresponding vibration intensity.

Bin Wall Thickness	24 ga.	22 ga.	20 ga.	1/16″	1/8″	3/16″	7/32″	1/4″	3/8″
Approximate Force Required	10 lbs.	50 lbs.	100 lbs.	250 lbs.	450 lbs.	600 lbs.	1,000 lbs.	1,250 lbs.	2,750 lbs.
VIBRATION INTENSITY	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**

Installation Tips— *Low-impact vibrators* induce flow in the direction they rotate, so you can enhance flow by aligning your vibrator with your flow direction. *High-impact vibrators* produce strong pounding action, so a solid mount is necessary—performance can be significantly impaired without it.

For best results, mount vibrator to a channel bracket welded to the bin or hopper, not directly to the bin wall. Use more than one vibrator when the diameter or length of your container wall is greater than 10 feet.

Low-Impact Air-Powered Vibrators

Keep materials moving uniformly in your bin or hopper. Using high-frequency vibration, these air-powered ball vibrators create flow without jarring your container walls. Vibrators are lubrication free, but can be run on lubricated air for a longer life except Style E, which require nonlubricated air. All vibrators are rated for continuous duty and have a muffler. Mounting fasteners are not included.

(A-D) High-strength ductile iron vibrators with NPT threads have rugged construction and are dust tight. Inlet and outlet ports are NPT female. Max. operating temp. is 250° F, unless noted.

(E) Sanitary aluminum vibrators with BSPP threads are food grade, lubrication free, dust tight, and watertight. Inlet and outlet ports are BSPP (British Standard Pipe Parallel) female. Max. operating temp. is 210° F.

(F) Tuff-Lite thermoplastic vibrators with NPT threads are durable, lightweight, and dust resistant with high rust and impact resistance. Inlet and outlet ports are NPT female. Max. operating temp. is 275° F.

♦ Max. operating temp. is 350° F.

Energy-Efficient Low-Impact Air-Powered Vibrators

A

Cut down on air consumption and noise. With turbine design, these vibrators use less air to create more vibrations per minute, are quieter, and have a longer service life than our other low-impact air-powered vibrators. All are rated for continuous duty and are dust resistant. All are lubrication free and have a muffler. Mounting fastener is included, except Style C.

(A) Miniature acetal vibrators with push-to-connect fitting are compact and corrosion resistant. Max. operating temp. is 180° F.

(B) High-strength ductile iron vibrators with NPT threads have the same mounting style as Style A on page 513 and are easy to swap out as a quieter option. Inlet and outlet ports are NPT female. Max. operating temp. is 200° F.

(C) Food-processing aluminum vibrators with BSPP threads are ideal for use in food, pharmaceutical, and clean room applications. Inlet and outlet ports are BSPP (British Standard Pipe Parallel) female. Max. operating temp. is 230° F.

★ Inlet port is push-to-connect fitting for 1/4″ tube OD. ♣ Outlet port is 10-32 UNF. ▲ Outlet port is 1/8″ NPT female.

High-Impact Air-Powered Vibrators

D

Get high force linear motion perpendicular to your bin or hopper with a compact piston vibrator. All are dust resistant.

(D) Vibrators without muffler use metal-to-metal contact to provide higher force. Body and piston are steel. Inlet and outlet ports are NPT female, unless noted; all have a top inlet. Rated for intermittent duty; 67% duty cycle with a max. "on" time of 16 hours. Max. operating temp. is 200° F. Vibrators end mount; fastener is included.

(E) Cushioned-impact vibrators with muffler have cushioned ports so the piston does not slam against your container wall. Body and piston are steel. Inlet and outlet ports are NPT female; all have a top inlet, unless noted. Rated for intermittent duty; 67% duty cycle with a max. "on" time of 16 hours. Max. operating temp. is 200° F. Vibrators end mount; fastener is included.

E

(F) High-force vibrators without muffler maximize vibration and force by side mounting at the same level and in the same direction as your material flow. Body is ductile iron; piston is steel. Inlet port is NPT female; all have a top inlet. Rated for continuous duty. Max. operating temp. is 250° F. Mounting fasteners are not included.

(G) Corrosion-resistant vibrators with muffler have an aluminum body and bronze piston for great corrosion resistance. Inlet and outlet ports are BSPP (British Standard Pipe Parallel) female; all have a top inlet. Rated for continuous duty. Max. operating temp. is 280° F. Vibrators have a female threaded hole to end mount; fastener is included.

♥ Inlet port is 1/8″ ID male hose barb. Outlet port is 10-32 UNF. ■ Has a side inlet. ◤ Has no outlet port.

Portable High-Impact Air-Powered Vibrators

High-Force Vibrator

Weld-On Bracket

Weld a steel bracket to each of your containers and move your high-impact vibrator wherever it's needed. All have a piston that provides impact perpendicular to your container. Vibrators have a ductile-iron body and a hardened steel piston. All are dust resistant. Inlet port is NPT female; all have a side inlet. Max. operating temp. is 200° F.

Low-force is suitable for small bins and hoppers. ***High-force*** are commonly used on rail cars and large bins.

For information about vibrator selection, see page 513.

Base-Mount High-Impact Air-Powered Vibrators

Distribute high-impact force evenly on your bin or hopper wall with these base-mount vibrators. Vibrators have a piston that provides impact perpendicular to your container. Body is rugged ductile iron and piston is hardened steel. All are dust resistant. Inlet and outlet ports are NPT female, unless noted; all have a side inlet. Rated for intermittent duty; 67% duty cycle with a max. "on" time of 16 hours. Max. operating temp. is 200° F. Mounting fasteners are included.

High-force vibrators without muffler make direct contact with your container for greater force of impact.

Cushioned-impact vibrators with muffler have cushioned ports so the piston does not slam against your container wall. These vibrators also have a muffler for reduced noise.

Vibrators with setup kit include a mounting channel, a hand-operated valve, an automatic lubricator, and a 5-ft. hose with fittings.

E

Quieter than most air-powered vibrators, these electric-motor vibrators produce smooth force without a jarring impact. All are dust resistant except Style A, and are rated for continuous duty, unless otherwise stated. Vibrators have a max. operating temp. of 104° F. Mounting fasteners are not included.

A Nonadjustable Force— Body is aluminum. All have a 3-ft. cord with 3-prong plug.

5802K11 and 5802K12 have an open motor enclosure; 5802K13, 5802K14, and 5802K15 have a totally enclosed motor.

B Nonadjustable Force with Watertight Body— Use indoors and outdoors in wet and dusty environments. Vibrators are suitable for washdown applications, but are not submersible. Body is aluminum. Motor is totally enclosed with a 3-ft. cord with 3-prong plug.

C Nonadjustable Force with Mounting Channel— Has a rugged ductile iron body. Motor is totally enclosed with 36" wire leads.

D Adjustable Force— Force adjusts from 0 to 100% by adding or removing the internal weights. Body and end covers are aluminum, unless noted. Motor is totally enclosed.

5808K61 has a 10-ft. cord with a 3-prong plug. Body and end covers are plastic for harsh environments. 5805K28 includes a manual starter and a mounting plate. It has a 10-ft. cord with 3-prong plug. *230/460 VAC vibrators* have a sealed motor for splash resistance and screw terminal connections.

E Adjustable Force and Speed— Vibrators are fully adjustable while running, allowing you to get the right force and speed for every job. A speed control is mounted on the cord. Additional force adjustments can be made by changing the position of internal weights.

Body is cast iron. Motor is totally enclosed with a 12-ft. cord with 3-prong plug. Vibrators are rated for continuous duty at 950-2,500 vibrations per minute. They're rated for intermittent duty at 0-950 and 2,500-4,000 vibrations per minute (50% duty cycle with a max. "on" time of 30 minutes).

Electric Vibrators

For information about vibrator selection, see page 513.

Extended-Life High-Impact Electric Vibrators

With no sliding or rotating parts to wear out, these electric vibrators are long lasting and virtually maintenance free. Their electromagnetic design provides greater force of impact with less noise than air-powered vibrators. Vibrators and required controllers are sold separately; mounting fasteners are not included. All vibrators are dust resistant and rated for continuous duty. Body is aluminum and steel. Max. operating temp. is 200° F. All have a 10-ft. cable with 2″ wire leads.

High-force vibrators are watertight. *Style D* have an internal cushion for reduced noise, making them ideal for use in confined spaces.

Required controllers (sold separately) are necessary to operate vibrators. All have adjustable speed control and screw terminal connections. *Style F* are for use indoors and have two 7/32″ dia. mounting holes. *Style G* has an enclosure rated NEMA 4 for resistance to splashing liquids and dusty environments. It has four 5/16″ dia. mounting holes.

Water Heaters & Heat-Sink Compounds

Point-of-Use Instant-Heat Electric Water Heaters

Single Fixture

Temperature Maintaining Single Fixture

Also known as tankless electric water heaters, these provide instant hot water at the point of use, while taking up less space than heaters with a tank. And compared to gas heaters, electric heaters are easier to install and don't require a relief valve. They turn on when water flows through the heater and turn off when flow stops. These products are ANSI certified for use with drinking (potable) water in all states as of July 1, 2011. Connections are compression tube fittings, except 57565K83, which is NPT male. Use with water pressure between 25 and 150 psi.

Fixed-Output Water Heaters— Deliver constant heat to your water. All are UL and C-UL listed and meet ASSE 1070. *Single-fixture heaters* comply with OSHA requirement of 105°–110° F for handwashing. *Double-fixture heater* handles two side-by-side utility or handwashing sinks. Complies with OSHA requirement of 105°–110° F for handwashing. *Four-fixture heater* can be used with circular multistation wash fountains or a single shower.

Automatic-Temperature-Maintaining Water Heaters— Use when precise water temperature is needed. Adjust their internal thermostat to the exact output temperature you need. Heaters are UL and C-UL listed and meet ASSE 1070, except 57565K81, K83, and K85, which are ETL listed. *Sanitation* and *deionized water heaters* are for dishwashing and parts washing applications.

Silicone Free	–40° to +320° F	2 oz.	**3883K24**	11.70

Water Heaters

Standard Electric

Heat water for long pipe runs through your facility. These heaters include a thermostat for accurate water temperature output. Water connections are ¾″ NPT male, except for commercial heaters, which are 1½″ NPT male; 3598K64, which is 1″ NPT male; and tankless heater, which is ½″ NPT male. Connections are on the top of the heater, unless noted.

Standard units have polyurethane insulation.

Electric Water Heaters— A heavy steel jacket and glass-lined tank protects against corrosion. Elements are made of tin-coated copper. UL listed. Heaters require hardwiring, except 3572K41 which includes a 4-ft. cord with standard three-prong plug. *Commercial* unit has 3″ of fiberglass insulation that meets ASHRAE (American Society of Heating and Refrigeration Engineers) energy efficiency standards.

Natural-Gas Water Heaters— A heavy steel jacket and glass-lined tank protect against corrosion. *Standard* units have a pilot-light ignition. Gas connections are ½″ NPT female. *75- and 100-gallon units* meet ANSI Z21.10.3 for water heaters. *Commercial* unit has spark ignition and up to 2″ of polyurethane insulation. Gas connections are ¾″ NPT female. CSA certified.

Tankless Natural-Gas Water Heater— Provides instant hot water and is more energy and space efficient. Pilot requires at least 0.6 gpm to ignite; no electrical connection is needed. Operates on 30-150 psi water pressure. Gas connection is ¾″ NPT male on the bottom of the unit. Unit measures 25¾″ Ht.×16¾″ Wd.×8½″ Dp.

Water Heater Replacement Parts

Heater elements are made of zinc-plated copper and must be mounted horizontally. *Screw-in* style have 1″ NPSM threads. *Flat flange* and *raised flange* styles have four bolt holes on a 2½″ dia. circle (gaskets are included; 5⁄16″ dia. bolts are not). Flange is steel.

Thermostats are for 120 to 480 VAC. Temp. range is 120° to 160°F.

Pilot-light thermocouples include adapter nut. CSA certified.

Portable Recirculating Water Heaters

Take these lightweight heaters anywhere you need hot water. When connected below a sink, tank, or process bath, heaters use gravity and a heavy duty drive pump to provide continuous hot water. A graduated control dial lets you adjust and maintain water temperature to within ¼°F.

Heaters operate on 120 VAC, single phase. They include a stainless steel cover and a 7-ft. long cord with standard three-prong plug (a ground fault outlet, sold separately, is recommended for safety). Heaters measure 7″ Ht.×9″ Wd.×17″ Dp.

36255K63 has 5⁄8″ OD barbed inlet and outlet and a 6-ft. long, 5⁄8″ ID water hose for connecting to your bath or sink. 36255K64 has ½″ OD smooth inlet and barbed outlet and a 6-ft. long, ½″ ID water hose.

Note: Do not run dry.

Temp. Range	gpm @ 3-ft. Rise	Watts	Amps	Wt., lbs.		
75° to 110°F	8	1,000	8.3	13	**36255K63**	$626.57
75° to 175°F	8	1,500	14	15	**36255K64**	863.45

Corrosion-Inhibiting Rods and Pads

Also known as sacrificial anodes, these rods and pads are attacked and consumed by any corrosive action that would otherwise attack and consume your valuable equipment.

Rods have a reinforcing steel core that holds the zinc or magnesium in place until it's completely consumed. They come with NPT hex brass plugs. Connections are NPT male. *Zinc rods* protect from corrosion and scaling in hot water applications. Ideal for use in salt water. They can also be used in cold water. *Magnesium rods* protect from heavy corrosion in cold and hot fresh water applications.

Pads have a low-profile for use in your water-circulating process equipment. They have a 5⁄8″ dia. center hole for mounting (fastener not included). *Zinc alloy pads* provide corrosion protection in salt water and hot water applications. Meet MIL-A-18001. *Aluminum alloy pads* last longer than zinc alloy and can be used in both dirty fresh water and salt water applications. Meet MIL-A-24779.

About Immersion Heaters

Immersion heaters are designed to heat water, oil, solvents, process solutions, and viscous liquids through direct contact. When choosing an immersion heater, make sure the heating element material and the watt density are right for your fluid.

Note: To prevent heater failure, do not run heaters dry and keep elements free from sludge, scaling, and mineral deposits.

Heating Element Materials

Liquid To Be Heated	Max. Watt Density (watts/sq. in.)	Heating Element Material
Mild Acid Solutions (acetic, chromic)	40	Quartz
Mild Acid Solutions (tartaric)	40	Type 316 Stainless Steel
Anodizing Solutions	Not Rated	PTFE Covered
Caustic Soda, 2%	48	Incoloy
Caustic Soda, 10%	25	Incoloy
Caustic Soda, 75%	25	Incoloy
Chrome-Plating Solutions	Not Rated	Titanium
Ethylene Glycol	30	Type 304 Stainless Steel
Oil, Fuel (Grades 1 and 2, Distillate)	23	Steel
Oil, Heat Transfer	23	Steel
Oil, Lubrication (SAE 10-30)	23	Steel
Oil, Mineral	23	Steel
Organic Salts	Not Rated	Titanium
Pickling Solutions	Not Rated	PTFE Covered
Plating Solutions	Not Rated	PTFE Covered
Water, Clean (less than 1% solution)	Not Rated	Copper
Water, Process (less than 3% solution)	60	Types 304 or 316 Stainless Steel
Water, Process (less than 6% solution)	60	Incoloy
Water, Salt	Not Rated	Titanium

Watt Density

Watt density is the power (watts) produced per square inch of surface area of the heater. The higher the watt density, the higher the potential for a surface to transmit heat energy. If watt density is too high, carbonization and overheating can damage the heating element and the liquid being heated.

Some liquids such as water, vegetable oil, and salt baths can withstand a high watt density. Others, such as petroleum oil and sugar syrups, must use lower watt densities because they do not readily absorb or conduct the heat being generated.

Wattage Required to Heat Water

The chart shows the approximate wattage required to heat room-temperature water in a tank. The figures are based on a warm-up time of 6 hrs. Thick solutions, low initial temperatures, and shallow, uninsulated tanks will all increase warm-up times and heat requirements. Multiply watts by 3.412 to convert to Btu/Hr.

	Wattage Required to Heat Water					
Gallons	to 100° F	to 130° F	to 150° F	to 170° F	to 190° F	to 210° F
5	67	134	179	224	268	313
10	134	268	358	448	537	627
15	201	403	537	672	806	940
25	336	672	896	1,120	1,344	1,568
50	672	1,344	1,792	2,240	2,688	3,136
100	1,344	2,688	3,584	4,480	5,376	6,272
200	2,688	5,376	7,168	8,960	10,752	12,544
400	5,376	10,752	14,336	17,921	21,505	25,089
800	10,752	21,505	28,673	35,842	43,010	50,179
1,000	13,440	26,881	35,842	44,802	53,763	62,724

To heat water in situations not shown in the chart above, use the following formula for determining wattage:

$$\frac{\text{Gallons} \times \text{Temp. Rise (°F)}}{372 \times \text{Heat-up Time (Hrs.)}} \times 1{,}000 = \text{Watts}$$

To heat liquids other than water, use the following formula for determining wattage:

$$\frac{\text{Liquid Wt. (lb.)} \times \text{Specific Heat [Btu/(lb. ×°F)]} \times \text{Temp. Rise (°F)}}{3.412 \times \text{Heat-up Time (Hrs.)}} = \text{Watts}$$

Screw-Plug Immersion Heaters

With NPT threads on the screw plug, these heaters are easy to insert into any tank with a threaded hole. The result is direct-contact heating of liquids for very efficient heat transfer. Mount horizontally or vertically, as long as the element is completely immersed in liquid. Enclosures are NEMA 1 rated (indoor use only), except for hazardous-location heaters. All have screw terminals for hardwiring. For bulkhead fittings, see pages 115-116.

Heaters with temperature control are adjustable from 60° to 250° F, unless noted. ***Three-phase heaters*** require a three-pole magnetic contactor (see 6564K on page 902).

To calculate amps, use the following formulas:
Single phase: amps = total watts ÷ voltage;
3 phase: amps = total watts ÷ (voltage × 1.73).
Example for 3656K175: amps = 3,000 watts ÷ (240 × 1.73) = 7.23

Type 304 Stainless Steel Element and Screw Plug

For heating process water with less than 3% alkaline or acid content and maximum pH range of 5-9. Also suitable for use with soap and detergent solutions, soluble cutting oils, and where corrosion protection is necessary. Elements are UL recognized and CSA certified. *120-VAC heaters* have a 4⅝″ Dia.×2⅝″ Lg. enclosure size. *240-* and *480-VAC heaters* have a 4″ Dia.×3½″ Lg. enclosure size.

★ Enclosure is 3¾″ Dia.×2⁹⁄₁₆″ Lg.

Compact Cartridge-Style Immersion Heaters

More compact than screw-plug immersion heaters, but with the same efficient heat-transfer properties. Use with water and 90% water-soluble liquids. Connects with wire leads. Mount horizontally or vertically. Max. temp. is 212°F. Heaters should be used with a temperature control switch (not included; see pages 604-606). Heaters with a ***Type 316 stainless steel element*** have a UL-recognized and CSA-certified element. Screw plug is NPT male and made of Type 316 stainless steel. Heaters with an ***Incoloy element*** have a Type 304 stainless steel NPT male screw plug.

For information about immersion heaters, see page 518.

Flange-Mount Immersion Heaters

For high-volume applications, these extra-large immersion heaters have a welded-on flange for mounting to large tanks. Heating element is Incoloy 800 for use with process and solution water with a maximum pH range of 5-9 and less than 6% alkalines or acids.

Heaters accept a thermostat switch with 3/8″ dia. probe (not included; see pages 604-605) and have screw terminals for hardwiring to a power source. Watt density is 45 watts/sq. in. UL listed and CSA certified. All are three phase. Flange mounting holes are 3/4″ dia. Heaters for *3″ pipe size* have four flange mounting holes; heaters for *5″ pipe size* have eight flange mounting holes.

To Order: Please specify 240 or 480 volts.

★ *Note:* The 4″ of element length below the flange is unheated.

Freeze-Protection Immersion Heaters

Built-in temperature control keeps your fluids between 70° and 90° F to protect against freezing and icing. They have a weatherproof NEMA 4 enclosure for outdoor use and an easy-to-install, cartridge-style element with a threaded brass screw plug. Element is Type 316 stainless steel for heating machine oil (SAE 30), mineral oil, and hydraulic oil. Watt density is 15 watts/sq. in. Heaters have a 1/2″ conduit connection and wire leads for hardwiring. Mount horizontally only. UL recognized and CSA certified. All heaters are single phase. **To Order:** Please specify 120 or 240 volts.

Watts	Amps @ 120 VAC	Amps @ 240 VAC	Pipe Size	Element Dia. × Lg. (A)	For Tank Size, gal.		
250	2.1	1.0	1/2″	11/16″ × 10 1/2″	5- 25	3493K11	$154.73

1,000	8.4	4.2	3/4″	3/4″ × 31″	50-100	3493K13	259.02

De-Icing Floating-Tank Immersion Heaters

Keep outdoor water tanks from freezing in temperatures as low as –20° F. These heaters float on the surface and automatically turn on when tank contents cool down to 45° F; they turn off when contents reach 55° F. Housing is heavy duty polypropylene. Heaters have an Incoloy stainless steel tubular heating element that will automatically shut off if the heater is removed from the tank. Heaters are furnished with a 6-ft. long cord with standard three-prong plug. Operate on 120 VAC, single phase. UL listed.

For use with metal tanks. To use on a nonmetal tank, use the ***clip-on heater guard*** to keep heater from coming in contact with the tank walls.

Watts	Amps	O'all Size Ht. × Dia.	For Approx. Tank Cap., gal.		
1,000	8.3	5″ × 7 1/2″	150	3639K47	$29.92

Clip-On Heater Guard				3639K61	14.19

High-Temperature Inline Immersion Heaters

Often connected to high-flow blowers and used in plastic injection-molding and extrusion applications, these heat your process air and liquids up to 800° F. Use with clean air, inert gases, and medical and food applications. They have an elbow-style design with a 3/8″ NPT male inlet and 1/2″ NPT female outlet for easy installation into your pipeline. Element and body are Type 316 stainless steel. Heaters have screw terminals for electrical connections; connections are housed in a NEMA 1 enclosure (indoor use only). All are 120 VAC, single phase.

Watts	Watts Density, watts/in.	Amps	O'all Lg.		
400	100	3.4	8 3/4″	7400T11	$292.49
600	100	5.0	10 3/4″	7400T12	336.29

1,200	120	10.0	14 3/4″	7400T14	378.16

Through-Hole Mount Immersion Heaters

Mount these Type 316L stainless steel heaters permanently through a 27/16″ unthreaded hole in the bottom or side of a tank (For hole saw, see 41005A42 on page 2404). A silicone rubber gasket seals the heater into the tank hole.

Heaters have automatic low-water emergency shutoff and restart, plus a low-fluid-level pilot light. They have wire leads for hardwiring. Use them in steam tables, humidifiers, and water tanks. UL recognized.

Watts	Watt Density, watts/ sq. in.	VAC (Phase)	Amps	Element Dia. × Lg. (A)

Inline Immersion Heaters

Titanium Element

Easily connect these into your pipeline—they have NPT threads on each end so they're able to heat circulating liquid while taking up less space than a circulation heater. To prevent burnout, heaters automatically shut off at a set temperature.

Heater with an Incoloy element has a thermostat that regulates liquid temperature from 90° to 109° F; heating element shuts off at 121° F. It includes a 3-ft. long cord with standard three-prong plug. Connections are 1 1/2″ NPT male.

Heaters with titanium element have a thermostat that regulates liquid temperature from 90° to 190° F; heating element shuts off at 210° F. Enclosure is NEMA 4 rated (indoor/outdoor use). They have wire leads for hardwiring, unless noted. Connections are 1 1/2″ NPT female. Heaters are for use with oils, naphtha, sodium nitrate, and ammonium hydroxide.

Watts	Watt Density, watts/sq. in.	VAC (Phase)	Amps	O'all Lg.

■ Has 6-ft. long cord with standard three-prong plug.

Ultra-Fast-Response Circulation Immersion Heaters

These compact heaters are extremely powerful, yet still maintain a low watt density. Element is passivated Type 304L stainless steel for use with deionized water, air, inert gases, ethylene glycol, and petroleum-based oils.

Heaters have a Type 304 stainless steel body, a Type K thermocouple with 4-ft. leads for temperature measurement, and wire leads for hardwiring. Connections are NPT female.

Note: Heaters are dual voltage. All are single phase.

For information about immersion heaters, see page 518.

Circulation Immersion Heaters

Liquid flows directly past the heating element for efficient, evenly distributed direct-contact heating. They install directly into your pipeline—no need to tap a hole into your tank. All have wire leads for hardwiring to a power source.

Heaters with an ***Incoloy element*** have a fiberglass-insulated steel chamber and are good for heating process water solutions. They have a 60° to 250°F thermostat and NPT male pipe connections. Watt density is 45 watts/sq. in. *Hazardous-location* heaters have a housing that is CSA NRTL/C certified and meets Class I, Div. 1, Groups B, C, and D; Class II, Groups E, F, and G; and Class III specifications.

Heaters with a ***steel element*** have a carbon steel chamber. Use to heat lubricating oils such as SAE 10-30. They have a 150° to 560°F thermostat and NPT female pipe connections. Watt density is 23 watts/sq. in.

Heaters with a ***copper element*** have a brass chamber and are for use with very clean water only. They have a 60° to 180°F thermostat and NPT female pipe connections. Watt density is 60 watts/sq. in.

Acid-Resistant Fuse-Protected Immersion Heaters

To prevent fire and element burnout, a replaceable fuse cuts off power to the heater if the element is exposed to air and its temperature exceeds 190°F. Their quartz element is excellent for use with bright nickel, clear chromate, copper, and acids such as nitric, hydrochloric, and sulfuric. Do not use with fluorides or alkaline-based, caustic, or cyanide processes. Includes a polypropylene guard to protect element.

Heaters are for use with open-style tanks. They come with a plastic plate under the head with two ½″ OD mounting holes to simplify attachment to tank. Includes 3 feet of flexible conduit with wire leads. Use with a temperature control switch (not included; see 35055K series on page 604). All heaters are single phase. Watt density is 35 watts/sq. in.

To Order: Please specify 120, 240, or 480 VAC where applicable.

Watts	Amps @ 120 VAC	240 VAC	480 VAC	Element Lg. (A)	Min. Liquid Level		
500	4.2	—	—	6″	8″	3560K39	$317.65

Optional Fuse for up to 375°F 3560K34 53.53

Immersion Heaters for 55-Gallon Drums

Heat all the way to the bottom of 55-gallon drums. These have an adjustable stainless steel bracket for hanging on the 2″ diameter bung of any standard 55-gallon drum. The heated portion of the element is located in the horizontal section and the bottom 4″ of the vertical section (min. liquid level); this improves flow of high-viscosity solutions. All include a thermostat in a NEMA 1 enclosure (indoor use only) and have screw terminals for hardwiring to a power source. Thermostat temp. range is 60° to 250°F.

Type 321 Stainless Steel Element—Use the *1,000-watt* unit for heavy oils, silica gels, molasses, and linseed oil. The *4,000-watt* unit is for process water, electroplating solutions, ethylene glycol, and chlorite solutions.

Incoloy Element—The *1,000-watt* unit is good for melting oils, fats, and tar. Use the *4,000-watt* unit for solvents, water, and water-based solutions.

Steel Element—Use *1,000-watt* unit for fuel oils, mineral oils, light- and medium-weight oils, paraffin, and wax. *4,000-watt* unit is for alkaline soaking cleaners, soapy solutions, and caustic solutions.

Element Material	Watts	Watt Density, watts/sq. in.	VAC (Phase)	Amps		
Type 321 SS	1,000	8	120 (1)	8.4	3567K411	$540.80
Type 321 SS	4,000	32	240 (1)	16.7	3567K412	540.80
Incoloy	1,000	8	120 (1)	8.4	3567K211	719.75
Incoloy	4,000	32	240 (1)	16.7	3567K212	719.75
Steel	1,000	8	120 (1)	8.4	3567K811	470.40
Steel	4,000	32	240 (1)	16.7	3567K812	480.00

Immersion Heaters for Small Tanks

Shorter heights and element lengths make these heaters ideal for 5-10 gallon tanks. Not for use with plastic containers. Heaters must be immersed in liquid up to at least the minimum liquid level.

1 ***Clip-On Heaters with Type 316 Stainless Steel Straight Element***—For water-based solutions with stable liquid levels. They include a thermostat that adjusts from room temp. up to 212°F (dial graduations are from 1 to 11) and have a 6-ft. cord with three-prong plug.

2 ***Side-Hanging Heaters with Type 316 Stainless Steel Circular Element***—Use to heat water-based solutions with fluctuating liquid levels. All include a thermostat for control from room temperature to 212°F. They have a 6-ft. cord with three-prong plug. Those with *pulsating-step temperature control* maintain constant heat by cycling on and off. Those with *thermostat control* provide faster heating than pulsating control.

3 ***Flat-Base Heater with Incoloy Circular Element***—Has a circular base that sits in the middle of your tank—ideal when there's nothing to clip onto. Use with clean water only. Remove from water when desired temperature is reached. To prevent element burnout, an internal temperature control shuts off power if heater is operated outside of water for 2-3 minutes. All have a 5½-ft. long cord. UL listed. *120 VAC heaters* have a standard three-prong plug; *240 VAC heater* has a NEMA 6-15 plug.

For information about immersion heaters, see page 518.

Alkaline-Resistant Fuse-Protected Immersion Heaters

Single Element, Single Phase

Three Element, Three Phase

Use in plating baths and printed circuit-board applications. To prevent element burnout and possible fires, a replaceable fuse cuts power if the element reaches 190° F. Element must be kept scale and sludge free. Element tube is 2″ dia., unless noted.

Heaters have a mounting flange with two 3/8″ OD bolt holes for attaching to the top of a tank. For use with open-style tanks. Watt density is 35 watts/sq. in.

All are made of Type 304 stainless steel, which is good for most alkaline and cyanide-based processes. Ideal for silver cyanide, alkaline soaking cleaners, and alkaline cleaners (electrified).

Immersion heaters include 3 feet of flexible conduit with wire leads. Heaters should be used with a temperature control switch (not included; see 35055K series on page 604).

Immersion heaters with temperature control come complete with digital control box and a cord with plug. No hardwiring required. For safety, they include a plug that only fits the receptacle in the temperature control box. The temperature control box has an 8-ft. long cord with standard three-prong plug and an 8-ft. long PTFE RTD sensor for easy insertion into tank. Heaters also have a clip for attaching to a rimless tank.

To Order: Please specify 120, 240, or 480 VAC where applicable.

Ultra-Chemical-Resistant Fuse-Protected Immersion Heaters

A stainless steel element with a thick PTFE cover gives these heaters superior corrosion resistance compared to our other immersion heaters. That, along with a low watt density of 10 watts/sq. in., makes them ideal for use with aqueous acid, alkaline, anodizing, and pickling solutions.

Horizontal portion of element is 3″ dia. To prevent element burnout and possible fires, a replaceable fuse cuts power if the element reaches 190° F. Use with open- and closed-style tanks. Heaters have a mounting flange with two 9/32″ OD bolt holes for attaching to the top of a tank.

Heaters are supplied with 3 feet of flexible conduit with wire leads. They should be used with a temperature control switch (not included; see 35055K series on page 604). All units are single phase. UL listed and CSA certified and CE approved. **To Order:** Please specify voltage where an amp rating is listed in the table.

Watts	Amps @ 120 VAC	Amps @ 240 VAC	Amps @ 480 VAC	Element Lg. × Wd.	Min. Liquid Level

Water-Tank Immersion Heaters

The only choice when you need to heat very clean, filtered water. In addition, their T-shaped, stainless steel element evenly distributes heat in tanks with low or fluctuating water levels. Heaters include a thermostat that lets you adjust and maintain a constant temperature from 60° to 212° F. They have an adjustable bracket for attachment to the tank. For use with open- and closed-style tanks no larger than 20″ Lg. × 20″ Wd. × 18″ Dp.

The bottom horizontal portion of the heater element is 2″ high. *120-VAC* heaters have a 4-ft. long cord with standard three-prong plug; *240-VAC* heaters have a 4-ft. long cord with a NEMA 6-30 plug (see page 787 for illustration).

Watts	Amps	Watt Density, watts/sq. in.	Element Lg. × Wd.	Min. Liquid Level

Bendable Tubular Immersion Heater Elements

Easily formed by hand, these heater elements can be configured into virtually any shape. Minimum bend radius is 15/16″ for 0.260″ dia. heaters; 1 1/16″ for 0.315″ dia.; and 1½″ for 0.430″ dia. Use to heat air, liquids, and gases. Maximum operating temperature is 1700° F. Elements are Incoloy for use in corrosive environments and have 2½″ of unheated length on each end. Each end has a ceramic insulator and a 10-32 threaded stud with washer, nut, and terminal. UL recognized. Heaters should be used with a temperature control switch (see 3626K on page 604, 7079K on page 605, and 7981K on page 606).

Replacement Ceramic Insulators (10 per pkg.) ..... 3540K75 **Pkg.** $11.28

About Heat Cable, Tape, and Rope

Heat cable can be used to maintain the temperature and viscosity of process fluids, protect pipes from freezing, and keep roofs and gutters free from snow and ice buildup.

Use fiberglass tape to secure heat cable onto pipes (see 7574A on page 3445). You should also wrap insulation around the pipe to protect the cable and ensure maximum heat output (see 5556K on page 3515).

Total watt output = cable length × watts/ft.
Amp draw = total watt output ÷ volts

Self-Regulating Heat Cable— Adjusts its power output in relation to surface as well as ambient (surrounding) temperatures. The hotter the ambient temperature, the lower the wattage output. As a result, no temperature controlling device is needed unless a specific, consistent temperature is desired.

Constant-Wattage Heat Cable— Always puts out the designated amount of watts per foot, no matter what the ambient (surrounding) temperature is. Because it's designed to continually supply wattage into the object being heated, it should be used with a temperature controlling device to prevent burnout. This also lets you maintain more precise temperatures.

Note: Constant-wattage cable cannot be overlapped. There must not be air gaps between the cable and the surface to be heated.

Watts/ft. Needed for Temperature Change

Temperature rise is the fluid temperature you need to maintain minus the minimum ambient (surrounding) temperature. Watts/ft. ratings are based on using fiberglass insulation.

Watts/ft. Needed for Temperature Change							
Temp. Rise	Insulation Thickness	Pipe Size					
		½″	¾″	1″	1¼″	1½″	2″
50° F	1″	1.7	1.9	2.2	2.5	2.8	3.3
50° F	1½″	1.3	1.5	1.7	1.9	2.1	2.5
50° F	2″	1.2	1.3	1.4	1.6	1.8	2
100° F	1″	3.5	3.9	4.5	5.3	5.8	6.8
100° F	1½″	2.8	3.1	3.5	4.1	4.4	5.1
100° F	2″	2.4	2.7	3	3.4	3.7	4.3
200° F	1″	7.5	8.6	9.9	11.5	12.6	14.9
200° F	1½″	6.1	6.8	7.7	8.9	9.7	11.2
200° F	2″	5.3	5.9	6.6	7.5	8.1	9.3

For example, to maintain a fluid temperature of 150° F with a minimum ambient temperature of 50° F (for a temperature change of 100° F), 1½″ of insulation, and a 1″ pipe, you need a heat cable with at least 3.5 watts/ft.

Power-Saving Heat Cable

The internal conductive core of this self-regulating cable adjusts power use based on the temperature. The colder it gets, the greater the heat output; as the temperature increases, the heat output automatically decreases. Requires the power-connection kit (sold separately) for hardwiring. To turn unit on and off, a temperature controller is recommended (see pages 604-606). Use on metal and plastic pipes for freeze protection and low temperature process maintenance. All cable has 16-ga., plated copper bus wires encased in a self-regulating, conductive core. The cable has a tinned-copper overbraid to provide a low-resistance ground.

Voltage is single phase. Cable can be safely overlapped but is not suitable for burying underground. UL listed, CSA certified, and FM approved Class I, Div. 2, Groups B, C, and D (unless noted).

Heat Cable with Required Power-Connection Kit

Heat Cable

Cable with jacket has a fluoropolymer outer covering that's designed for corrosive environments.

Low-Temperature Heat Cable— Maximum heat output is 150° F. Exposure temperature range is –40° to +185° F. *Standard cable* measures approximately 13/32″ Wd. × 3/16″ Thick. *Cable with jacket* measures approximately 29/64″ Wd. × 7/32″ Thick.

Medium-Temperature Heat Cable— Maximum heat output is 250° F. Exposure temperature range is –40° to +250° F. Cable measures approximately 13/32″ Wd. × 3/16″ Thick. Not CSA certified or FM approved.

Medium-Temperature Heat Cable with High Exposure Temperature— Maximum heat output is 250° F. Exposure temperature range is –40° to +375° F. *Standard cable* measures approximately 3/8″ Wd. × 5/32″ Thick. *Cable with jacket* measures approximately 13/32″ Wd. × 3/16″ Thick.

Connection Kits

Power-Connection Kit— Includes parts necessary to connect power to a run of cable. Includes standoff for connection to an electrical box, and parts to allow connection to the end of the cable. Use with both low- and medium-temperature cable.

3597K99 ..... $62.00

Cable-Extension Kits— Contain parts to let you add new cables to the end of an existing cable. *Low temp. kit* includes shrink tube and splices to add up to two lengths to an existing cable. *Medium temp. kit* contains parts to add one length to an existing cable.

For Low Temp. ..... 3597K28 ... $49.54
For Medium Temp. ..... 3597K93 ... 62.00

Additional-Cable Kit— Contains the parts to connect and terminate three additional runs of cable to an existing electrical box. Requires the power-connection kit to be previously installed.

3597K25 ..... $16.98

Ready-to-Use Power-Saving Heat Cable

An included 30″ power cord makes this cable ready to use and eliminates the need for termination and power kits. Cable is self-regulated so it does not require a temperature controller. The colder it gets, the higher the heat output; as the temperature increases, the heat output automatically decreases. Use for freeze protection on plastic and metal pipes up to 2½″ dia. Cable can be safely overlapped. Made of nickel-plated copper bus wire and a tinned-copper braid with waterproof polyolefin cover. Size is 7/16″ Wd. × 3/16″ Thick. Maximum heat output is 120° F. Exposure temperature range is –40° to +150° F. Watts/ft. rating is 6 @ 40° F. UL listed and CSA certified for pipe heating. Voltage is single phase. ***120 VAC*** cable includes a standard three-prong plug. It is also UL listed and CSA certified for roof and gutter de-icing applications. ***240 VAC*** cable has three stripped leads for hardwiring.

For information about heat cable, see page 523.

Hot-Environment Heat Cable

Heat Cable with Connection/ Termination Kit

The nichrome resistance wire in this constant-wattage cable provides continuous high heat output in high temperature environments. Use if you need higher temperatures or precise temperature control. Designed for process temperature maintenance. Temperature controller is required; see pages 604-606. Also requires a connection/termination kit or end-termination kit (sold separately). Cable is single phase and approximately 21/64″ Wd.×7/32″ Thick. FM approved Class I, Div. 2, Groups B, C, and D. Use with metal pipe only.

Note: To prevent hot spots and burnout, keep cable in direct contact with pipe (no air gap between cable and pipe) and do not overlap.

Heat Cable

High-Temperature Heat Cable— Maximum heat output is 400° F. Exposure temperature range is –30° to +400° F. Cable braid is corrosion- and abrasion-resistant stainless steel. CSA certified.

Ultra-High Temperature Heat Cable— Maximum heat output is 500° F. Exposure temperature range is –30° to +550° F. Braid is tinned copper covered in nonflammable PTFE jacket for moisture protection.

★ Kits include shrink tubes.

Extreme-Environment High-Intensity Heat Cable

Magnesium oxide insulation and an Incoloy sheath allow this constant-wattage cable to withstand temperatures from –40° to +1100° F. Ideal for floor warming. It can even be buried in concrete to melt snow as it lands. Cable diameter is 3/16″. Cold length is 7 ft. for all. They have wire leads for hardwiring. Max. heat output is 1100° F. For temp. controller, see pages 604-606.

Heat-Transfer Putty

To conduct heat and prevent burnout and premature failure when your heat cable can't make direct contact with the pipe, just mold this putty around the cable and stick it directly to the pipe. It withstands temperatures from –320° to +750° F and resists impact and thermal shock. Sets to a rock-like hardness in 24 hours.

1 gallon	3568K1	$31.96
5 gallon	3568K3	146.69

Roof and Gutter Heat Cable

Install these constant-wattage cables on roofs and in gutters and downspouts to prevent damage caused by ice buildup. *Note:* Cable must be installed before ice begins to form. Cables operate on 120 VAC and come with a 6-ft. long power cord with standard three-prong plug. To prevent burnout, they must not be overlapped. CSA certified. Cables include enough roof clips and downspout spacers for the length ordered. Extra clips and spacers are offered below.

Optional ***cable controller*** turns cable on when moisture is detected and temperature drops below 40° F; it turns off when moisture is no longer detected. Includes a 6-ft. long power cord with standard three-prong plug. Compatible with all cables listed below.

To determine the length of cable you need for a roof (in addition to cable needed for gutters and downspouts): Measure the length of roof and multiply by the number below, based on roof overhang.

Overhang	Multiplier	Overhang	Multiplier
12″	4	48″	8.1
24″	5.3	60″	9.6
36″	6.8	72″	11.2

For example, for a 24-ft. long roof with a 12″ overhang: 24 × 4 = 96 ft. of cable needed

Lg.	Watts	Amps	No. of Clips	No. of Spacers		Each

Extra Roof Clips (19) and Spacers (16)	3546K51	Pkg.	$10.70

Ready-to-Use Freeze-Protection Heat Cable

These constant-wattage cables are ready to go right out of the box—they include a temperature controller and a 30″ power cord with standard three-prong plug. Just plug them in and use to keep water flowing through plastic and metal pipes that are 3/4″ to 1 1/2″ dia. The controller turns the cable on when temperature goes below 38° F and off when it reaches 45° F. Cables are rated at 7 watts/ft., operate on 120 VAC, single phase, and have a weather-resistant PVC outer jacket. Size is 1/2″ Wd.×3/16″ Thick. Exposure temp. range is –40° to +155° F. UL listed and CSA certified.

Note: Apply cable straight along pipe; to prevent premature failure, do not overlap or spiral. Do not use cable that is longer than the pipe.

Lg., ft.	Watts	Amps		
3	21	0.18	3554K21	$37.56

Copper-Tubing Heaters

The 1/4″ dia. copper-tubing jacket on these constant-wattage heaters makes them more water and oil resistant than rubber-coated heat cable. Use indoors and out to protect pipes between 1/2″ and 24″ dia. The stiff copper jacket snakes around your pipes and stays in place. Ideal for freeze protection on oil lines, compressor drain lines, and sprinkler systems. Max. heat output is 220° F. Max. exposure temp. is 450° F.

To use, run the heater along the length of pipe. For a higher concentration of heat, spiral-wrap the heater around the pipe. Watts/ft. rating is 10. Voltage is 120 VAC, single phase. Heaters include a 6-ft. long power cord with standard three-prong plug.

Note: To prevent burnout, do not overlap. Do not use on plastic pipe.

Lg.	Watts	Amps		
5 ft.	50	0.4	3566K21	$185.82
10 ft.	100	0.8	3566K22	229.70
15 ft.	150	1.3	3566K23	271.73
20 ft.	200	1.7	3566K24	346.03

For information about heat cable, see page 523.

Easy-to-Wrap Heat Tape with Temperature Controller

This flexible constant-wattage heat tape is chemical and moisture resistant. It's made of braided wire elements wrapped in fiberglass and encapsulated in silicone rubber. Perfect for bending plastics, thawing frozen pipes, and applications requiring rapid heating. The attached controller lets you regulate the on and off time of the tape. Maximum continuous heat output is 450° F. Tape can be exposed to temperatures from –60° to +450° F. To prevent burnout, heat tape must not be overlapped and all of the tape must be in constant contact with the surface being heated. To determine amp draw, divide total watt output by volts.

Tape is 1/8″ thick, single phase, and has a 6-ft. long power cord. ***120 VAC*** tape includes a standard two-prong plug; ***240 VAC*** tape does not include a plug.

To Order: Please specify 120 or 240 VAC.

★ 240 VAC heat tape is rated at 1,800 watts (180 watts/ft.).

Super-High-Temperature Heat Rope

With a maximum heat output of 900° F, this constant-wattage rope really concentrates the heat. Ideal for spot warming metal pipes and situations involving odd shapes. Heaters are single phase and made of resistance wire covered with a fiberglass braid. Leads on each end permit easy connection to a power source or a voltage controller (recommended for use; sold separately below). To prevent burnout, rope must not be overlapped and must be in full contact with the surface being heated. Rope is 0.165″ thick and operates on 120 VAC. Exposure temperature range is room temperature to 900° F. UL recognized and CSA certified.

Extreme-Temperature Heat Tape

With a max. heat output of 1400° F, this constant-wattage tape is the highest temperature heat tape we offer. Use on short runs for fast, high heat. It's thin, wide, and flexible to easily conform to any surface shape. Insulation is fiberglass yarn. Tape is 1/2″ wide, 1/8″ thick, single phase, and has wire leads for hardwiring. Exposure temp. range is –60° to +1400° F. For temperature controller, see pages 604-606. *Note:* Not for use on plastic surfaces. To avoid hot spots and burnout, do not overlap. **To Order:** Please specify 120 VAC or 240 VAC.

About Heat Strips, Sheets, Film, and Blankets

Unlike other types of heaters, heat strips, sheets, film, and blankets (also known as flexible heaters) conform to flat and curved surfaces. They also fit into tight spaces and small gaps. Commonly used for warming solutions in ultrasonic cleaning tanks, spot warming, and condensation prevention.

Flexible heaters cannot be bent around a corner. They cannot be cut or overlapped and must remain in contact with the surface to be heated at all times. Overlapping or air gaps will cause the heating element to burn out. To remove all air gaps and bubbles from below the surface of adhesive-backed flexible heaters, we recommend applying with a rubber roller. Apply only to clean surfaces free of scale, rust, oxidation, and oils.

DC Voltage Flexible Silicone-Rubber Heat Strips

DC voltage is ideal for mobile and laboratory applications running on battery power. They work on metal and plastic tanks and have adhesive backing for sticking to very clean surfaces. Watt density is 5 watts/sq. in. They have 1-ft. wire leads for hardwiring. Max. heat output is 300° F. Exposure temperature range is –40° to +300° F.

To Order: Please specify 12 VDC or 24 VDC.

Heavy Duty Silicone-Rubber Heat Sheets

Made of a braided and knitted serpentine-wound heating element and protected by a thick layer of fiberglass-reinforced silicone rubber, these sheets are more rugged and will last longer than the Flexible Silicone-Rubber Heat Sheets and Strips on the next page. Their low watt density is ideal for the slow, gentle warming of large-surface-area vessels. Use on flat and slightly curved surfaces. Sheets are 3/16″ thick. Exposure temperature range is –60° to +450° F. All include 4-ft. silicone-rubber wire leads for hardwiring to a temperature control device (required for use; see pages 604-606). ***Adhesive-backed*** sheets have a nonreusable pressure-sensitive silicone adhesive. ***Plain-backed*** sheets can be attached with an RTV silicone rubber adhesive (see pg. 3417). *Sheets for plastic containers* have a watt density of 1.25 watts/sq. in. Max. heat output is 185° F. *Sheets for metal containers* have a watt density of 2.5 watts/sq. in. Max. heat output is 450° F.

For information about heat sheets, strips, and film, see page 525.

Flexible Silicone-Rubber Heat Sheets and Strips

For flexibility and efficient heat distribution, these heaters have nickel-alloy wire embedded in fiberglass-reinforced silicone rubber. They're designed to heat metal containers with both flat and oddly curved surfaces. Thickness is 0.035″-0.07″. Exposure temperature range is –70° to +450° F. All units are single phase and operate on 115 VAC. They have 1-ft. wire leads for hardwiring to a temperature-control device (recommended for use; see pages 604-606). UL and CSA recognized.

Adhesive-backed heaters are for use on very clean surfaces only. They have a nonreusable pressure-sensitive acrylic adhesive. Maximum heat output is 295° F.

Plain-backed heaters can be attached with Dow Corning 736 Silicone-Rubber Adhesive (see page 3419). Maximum heat output is 450° F.

Choose from three watt densities (unless noted): ***2.5 watts/sq. in.*** is suitable for gentle warming, ***5 watts/sq. in.*** is a good all-purpose choice, and ***10 watts/sq. in.*** is for rapid warm-up and higher temperatures.

To Order: Please specify watt density: 2.5, 5, or 10 watts/sq. in., unless noted.

Ultra-Thin Polyimide Heat Film

With a thickness of 0.008″, these slim heat patches conform to any flat or curved surface and slip into the smallest gaps. Use only on metal containers with very clean surfaces. They have adhesive backing for easy application. Heating elements are encapsulated in polyimide for excellent stretch and tear resistance. They're also resistant to chemicals, oils, and radiation. Maximum heat output is 300° F. Exposure temperature range is –40° to +300° F. Heaters have 1-ft. wire leads for hardwiring to a temperature-control device (recommended; see pages 604-606).

Choose from two watt densities: ***5 watts/sq. in.*** is a good all-purpose choice, and ***10 watts/sq. in.*** is for rapid warm-up and higher temperatures. **To Order:** Please specify watt density: 5 or 10 watts/sq. in., unless noted.

Super-Flexible Foil Heat Strips

When you need maximum flexibility, bend these heaters around edges and corners without breaking the internal heating element. They're made of durable aluminum foil and a nickel-chrome heat wire. Thickness is 0.2″. Max. heat output is 300° F. Exposure temp. range is –40° to +300° F. All include 18″ wire leads for hardwiring to a power source. Voltage is 120 VAC, single phase. Watt density is 5 watts/sq. in.

15-in-1 Ultra-Thin Polyimide Heat Film

Unsure of the wattage or shape you need? This film has 15 shapes (3 round, 3 square, 9 rectangular) to choose from—simply cut one out. Elements are encapsulated in polyimide for excellent stretch and tear resistance as well as resistance to chemicals, oils, and radiation. Film has an adhesive backing for attaching to very clean surfaces. Flat foil electrical connections let you attach alligator clips or solder wire leads. All shapes operate on 12 VAC, 28 VAC, 115 VAC, and 230 VAC. Film measures 12″×12″ and 0.008″ Thick. Max. heat output is 300° F. Exposure temp. range is –328° to +300° F.

7980T11 ..... $124.52

For information about heat blankets, see page 525.

Silicone-Rubber Drum and Pail Heat Blankets

Maintain and improve the flow of materials stored in drums and pails. These fiberglass-reinforced silicone rubber-coated heaters offer flexibility and moisture resistance. For a snug fit around the drum, heaters include clips. All are single phase and have a 6-ft., 3-wire power cord. ***120 VAC blankets*** include a standard three-prong plug. ***240 VAC blankets*** have stripped ends for hardwiring.

Note: Not for heating flammable materials or for use in hazardous areas. Contents of drum should be monitored with a thermometer (not included).

3″ Wide Blankets— For low-wattage heating. Exposure temp. range is –40° to +450° F.

4″ Wide Blankets— Have three layers of silicone rubber for reinforced construction and durability. Exposure temp. range is –40° to +500° F.

9½″ Wide Blankets— Maximize surface area contact and heat distribution. Ideal for heating substances that are sensitive to high heat concentrations. Exposure temp. range is –80° to +390° F. *Expansion straps* (sold separately) fit the heaters to drums 1½″ to 11″ larger in circumference (2 straps required per heater).

Extreme-Temperature Band Heaters

The ceramic insulation on these heaters allows for accurate heating to 1200° F. It also offers excellent heat retention, long heater life, and perfect heat distribution across the band. Heaters are 19/32″ thick and single phase. All have ¼″-20 stud and screw terminals, and a Type 430 stainless steel sheath.

To Order: Please specify 120 VAC or 240 VAC where an amp rating is shown in the table.

Adjustable-Diameter Silicone-Rubber Heat Blankets

Fit nonstandard sizes of drums, pails, tubs, and beakers—these silicone-rubber heat blankets have hook-and-loop to adjust to fit a wide range of metal and fiberglass vessels. Heaters are single phase and include a 6-ft. long power cord. Exposure temp. range is 70° to 370° F. 8063T51-*T53* have a max. heat output of 325° F; 8063T54 and *T55* have a max. heat output of 250° F.

120 VAC heaters include a standard two-prong plug. ***220 VAC heaters*** have stripped ends for hardwiring.

To Order: Please specify 120 VAC or 220 VAC.

Drum-Insulating Heat Blankets

For rapid heat-up and complete coverage of 55-gallon drums, choose these heat blankets. They feature a heating element enclosed in silicone-impregnated fiberglass cloth and 1″ thick fiberglass insulation for increased flexibility and heat retention. Ideal for drums stored in unheated warehouses (for indoor use only). Heaters fit 22⅝″ Dia. × 34″ Ht. drums. They have hook-and-loop edges for secure closing. *Note:* Not for warming flammable materials or for use in hazardous areas.

Heaters include a digital temperature controller that can be set between 50° and 450° F on heaters for metal drums and between 50° and 160° F on heater for plastic drums. All heaters have a 6-ft. long power cord.

120 VAC blankets include a standard three-prong plug. ***240 VAC blanket*** has stripped ends for hardwiring; see pages 784-789 for plugs and illustrations to select a plug that matches your receptacle.

Heated Drum Dollies

Heat your 55-gallon drums while keeping them portable. Just place your drum on the dolly's ¼″ Thick. × 15¼″ Sq. plate; the heating element is enclosed in the plate. An adjustment control dial regulates the ratio of on and off time. Perfect for heating thick, nonflammable, and nonhazardous materials such as chocolate, honey, and wax. For use with metal drums only. Max. capacity is 900 lbs. Size is 28½″ OD (24″ ID) × 6″ Ht. They have four 3″ dia. phenolic casters and a 6-ft. long power cord with plug (for illustrations of plugs, see page 787). UL listed.

Adjustable Quick-Clamp Stainless Steel Band Heaters

A quick-release hose clamp lets you attach these heaters to nonstandard containers, including air tanks, condenser tanks, and food-storage containers. Their sealed construction makes them oil and moisture resistant and submersible in salt water. Clamp is ¾″ wide and made of Type 301 stainless steel. Have 6-ft. wire leads and a grounding wire for hardwiring.

Noncontact Band Heaters for Sensitive Liquids

5-gal.

55-gal.

Get uniform heat that surrounds 80% of your pail or drum. These band heaters eliminate hot spots by heating the air around your vessel and never coming in direct contact with it. Fiberwool insulation and top and bottom gaskets minimize heat loss. They're ideal for heating heat-sensitive substances such as adhesives, sealants, and food. Heaters are thermostatically controlled. Choose temperature ranges of 60° to 250°F or 100° to 550°F. Heaters are furnished with an 8-ft. long power cord with plug (see table below for plug type). For use with metal pails and drums only. *Note:* Not for use with flammable materials or in hazardous areas.

The ***5-gallon capacity heaters*** let you set the pail in from the top. The ***55-gallon capacity heaters*** are mounted on casters and can be wrapped around the drum and secured.

★ For illustrations of plugs, see pages 784 and 787.

Steel-Band Pail and Drum Heaters

With a higher wattage output, these heaters warm up faster than silicone-rubber heaters. Elements are enclosed in corrosion-resistant aluminized steel. A spring-loaded toggle clamp adjusts for a snug fit around pails and drums. Heaters are 5″ wide (unless noted) and include a 6-ft. long power cord with plug (see table below for plug type). Heaters operate on 50-60 Hz. UL listed and CSA certified.

Note: Not for heating flammable materials or for use in hazardous areas. Heaters must be positioned at the base of the pail or drum.

Variable-cycle heaters for metal pails and drums have one dial that regulates the ratio of on and off time. A second dial controls heat output with three settings: high, medium, and low. ***Thermostat-controlled heaters for metal pails and drums*** have a thermostat that controls on and off settings. They are offered with a 60° to 250°F, 70° to 250°F, or 200° to 400°F thermostat. All also have a dial with three heat output settings: high, medium, and low. ***Heater for plastic drums*** has an on/off switch and a nonadjustable thermostat that does not let the heater exceed 165°F.

★ NEMA 5-15 is a standard three-prong plug. For illustrations of other plugs, see page 787. ♦ Heater is 9″ wide.

Guard for Steel-Band Drum Heaters

Clamp this guard around your 55-gallon drum above your band drum heater to protect the heater from spills. Guard is made of durable 16-ga. aluminum. OD is 30½″; ID is 22½″.

3526K64 ..... $157.97

High-Temperature Barrel Band Heaters

Aluminum

Mica

Wrap around the barrels of extrusion and injection-molding machinery and blown-film dies.

Voltage is single phase. Heaters should be used with a temperature control switch (see 3626K on page 604, 7079K on page 605, and 7981K on page 606).

Aluminum heaters have rugged refractory-insulated tubular heating elements that warm up quickly and maintain even heat output. Furnished with a terminal box and a 3-ft. long galvanized armor cable with leads. Max. heat output is 650°F.

Mica heaters have screw terminals and rust-resistant steel sheaths with mica-insulated ribbon wire elements. Max. heat output is 900°F.

To Order: Please specify 120 or 240 VAC.

Super-High-Temperature Nozzle Band Heaters

Mineral Insulated

Clamp around nozzles of extrusion, injection, and blow-molding machines. All are single phase, have 10″ wire leads, and should be used with a temperature control switch (see 3626K on page 604, 7079K on page 605, and 7981K on page 606). Maximum heat output is 1400°F. To determine amps, divide watts by volts.

All heaters have a Type 430 stainless steel sheath.

Mineral-insulated heaters produce high concentrations of heat and warm up rapidly.

To Order: Please specify 120 or 240 VAC.

Freeze-Protection Strip Heaters

Side View

Also known as convection heaters, these are ideal for freeze protection on flat surfaces. They're also used on electrical enclosures and cabinets for humidity and condensation protection. The heating element is encapsulated in silicone rubber and bonded to a 2⅛″ wide aluminum surface plate with a ½″ wide angled mounting bracket. Mounting holes are 1/4″ dia. (fasteners not included). Heaters have 4-ft. wire leads for hardwiring. All operate on 115 VAC, single phase and are UL recognized and CSA certified. Watt density is 5 watts/sq. in. Heaters include one of three nonadjustable thermostats—choose a heater with a thermostat that turns on at 40° F and off at 60° F, on at 105° F and off at 140° F, or on at 150° F and off at 175° F.

60-watt heaters are 6″ Lg.; mounting holes have a 4″ Ctr.-to-Ctr. Lg. *120-watt heaters* are 12″ Lg.; mounting holes have a 10″ Ctr.-to-Ctr. Lg.

Temp. Range	60 Watts Amps			120 Watts Amps

Heavy Duty Freeze-Protection Strip Heaters

With Thermostat

For durability and long life, these heaters have a Type 304 stainless steel alloy-sheathed tubular heater element protected by a perforated steel sheath. Ideal for freeze protection on flat surfaces such as square liquid tanks. They can also be used on electrical panels and mechanical equipment for humidity and condensation protection. Also known as convection heaters, their perforated steel sheath provides even heat distribution and has 8-32 screw terminals and 3/8″ diameter mounting holes for easy installation. Size is 8⅜″ Lg.×1½″ Wd.×3½″ Ht. Choose a heater with or without an adjustable thermostat with temp. range of 30° to 150° F.

Moisture-Resistant Strip Heaters

Style A Channel

Style A Finned

Style B Channel

Style C Channel

Ceramic insulation encased in a seamless Type 304 stainless steel sheath gives these heaters moisture resistance and high heat output. Maximum heat output is 1200° F. All are single phase. Size is 1½″ Wd.×5/16″ Thick. Heaters have two ½″ Lg.×5/16″ Wd. mounting slots and two 5/8″ high stainless steel stud and nut terminals with 10-32 threads. Choose from three different terminal configurations. *Note:* Heaters should be used with a temperature controller (see 7981K on page 606).

Channel Strip Heaters

Mount to metal surfaces using steel strapping or clamps (surface mounting clamps sold separately below). They should maintain contact with the surface at all times. **To Order:** Please specify 120 or 240 VAC and terminal configuration style (A, B, or C, where applicable) shown above.

Moisture-Resistant Strip Heaters with Wire Leads

Similar to our Moisture-Resistant Strip Heaters on the previous page, except these have 10″ wire leads for fast and easy installation. Made of ceramic insulation encased in a Type 304 stainless steel sheath for high heat output and to keep moisture out. Measuring only 1½″ Wd. × 5/16″ Thick., they are perfect for tight spaces. Connection to a temperature controller is recommended (see 3626K on page 604, 7079K on page 605, and 7981K on page 606). Heaters produce a maximum heat output of 1000° F; wire lead max. temperature is 482° F. Voltage is single phase. UL recognized.

Disc and Ring Heaters

Disc Heater (Full Sheath)

Ring Heater with Optional Mounting Clamps

The flat bottom of these heaters provides a large surface area for excellent heat transfer. Great for use with hot plates, dies, and platens. Heaters have two screw terminals. CSA certified. Heaters should be used with a temperature control switch (see 3626K on page 604, 7079K on page 605, and 7981K on page 606). *Note:* Not for use where moisture is present.

Half-sheath heaters provide faster heat-up. *Full-sheath* heaters are impervious to dirt and are UL recognized.

For better surface contact, mount with the *optional mounting clamps*, sold separately below.

Disc heaters have a maximum heat output of 750° F. Heaters have an iron sheath and a center hole for mounting. Screw terminal size is 6-32 × 7/16″ high.

Ring heaters have a maximum heat output of 1200° F. Sheath is chrome steel. Screw terminal size is 10-32 × 9/16″ high.

Cartridge Heaters

Insert into a well or hole to transfer heat across metal surfaces. These heaters are insulated with magnesium oxide and encased in a Type 304 stainless steel sheath. All have 10″ wire leads. They're ideal for heating plates, molds, dies, and platens. Max. heat output is 1000° F; wire lead max. temperature is 400° F for 3/16″ and 1/4″ dia. heaters and 482° F for 3/8″ to 5/8″ dia. heaters. UL recognized and CSA certified. Heaters should be used with a temperature control switch (see 3626K on page 604, 7079K on page 605, and 7981K on page 606).

Easy-to-Insert High-Temperature Cartridge Heaters

A bonded-graphite coating greatly eases insertion and removal, and improves heat transfer. Heaters have an Incoloy sheath and 1-ft. wire leads. Max. heat output is 1600° F; wire lead max. temperature is 842° F. All operate on 120 VAC, single phase. UL recognized and CSA certified. Heaters should be used with a temperature control switch (see 3626K on page 604, 7079K on page 605, and 7981K on page 606).

High-Temperature Cartridge Heaters

Tightly wound heating elements are insulated by magnesium oxide and condensed to produce a more durable heater with high heat output and resistance to impact and vibration. Heaters are protected by an Incoloy sheath and have 1-ft. wire leads. Max. heat output is 1600° F; wire lead max. temperature is 842° F. All are single phase, UL recognized, and CSA certified. Heaters should be used with a temperature control switch (see 3626K on page 604, 7079K on page 605, and 7981K on page 606). *Note:* To calculate amps, divide watts by volts.

Braided Lead Covering— Braid is stainless steel for added protection of wire leads.

Armored Lead Covering— For superior protection against abrasion. Armor is stainless steel.

To Order: Please specify 120 or 240 VAC (unless noted) and wattage (where applicable).

Cartridge Heater with Standard Lead Covering

Metric High-Temperature Cartridge Heaters

For insertion into metric dies, molds, and hot plates, these heaters are similar to our High-Temperature Cartridge Heaters. Heaters have an Incoloy sheath and 10″ wire leads for hardwiring. Max. heat output is 1600° F; wire lead max. temperature is 842° F. All are single phase. Use with a temp. control switch (see 3626K on page 604, 7079K on page 605, and 7981K on page 606). *Note:* To calculate amps, divide watts by volts. **To Order:** Please specify 120 or 240 VAC.

High-Temperature Cartridge Heaters with Internal Temperature Sensors

Monitor temperature right at the source of the heat. All have an internal Type K thermocouple and are ideal for precise temperature control in applications up to 1400° F. Thermocouple measures from 200° to 2300° F. Sheath is Incoloy. Wire leads are 14″ long and have a stainless steel braid. Wire lead max temp. is 480° F. Single phase, UL listed, and CSA certified. *Note:* To calculate amps, divide watts by volts. **To Order:** Please specify 120 or 240 VAC and wattage (where applicable) from choices listed.

Heat Exchangers

Also known as shell-and-tube heat exchangers because of their straight, internal tubes that exchange thermal energy with the liquid in the shell. For superior heat transfer and strength, tubes are baffled so liquid makes four passes through the tubes. Ideal for applications that require a low pressure drop across the exchanger. More forgiving with viscous fluids than brazed-plate exchangers. Suitable for water heating; oil, gas, and water cooling; and temperature control. Built-in mounting feet rotate 90° for easy installation. Tubes can be cleaned. Connections are NPT female. *Note:* Cooling capacity is based on cooling 180° F process water with 85° F water and a 10 psi pressure differential.

Steel Heat Exchangers— Recommended for cooling lube oil when brass can't be used and the corrosion resistance of stainless steel isn't necessary. All have a steel shell, copper tubes, and cast iron caps. Maximum working pressure is 300 psi shell side; 150 psi tube side. Maximum working temperature is 300° F.

Brass Heat Exchangers— These nonferrous heat exchangers have brass shell, copper tubes, and cast iron caps. They also have corrosion-inhibiting, renewable zinc rods. Recommended for use with fluids that are hard to heat and cool, such as oil. Maximum working pressure is 300 psi shell side; 150 psi tube side. Maximum working temperature is 300° F.

Stainless Steel Heat Exchangers— For heating and cooling deionized water and corrosive liquids. All parts that come in contact with fluids are made of Type 316 stainless steel. Maximum working pressure is 225 psi shell side; 150 psi tube side. Maximum working temp. is 450° F.

ⓘ For additional information about shell-and-tube heat exchangers, including additional dimensions, go to mcmaster.com and search for **3222KAC**.

Heavy Duty Heat Exchangers

Standard

Consisting of a steel shell with copper tubes and cast iron caps, these heat exchangers have a heavy duty, two-pass U-tube configuration for excellent heat transfer. Ideal for using steam to heat water or other liquids. The internal U-tubes expand slightly when used with steam, unlike our other heat exchangers, which have a fixed mechanical design. Connections are NPT female.

Standard exchangers have a maximum working pressure of 100 psi and a maximum working temperature of 400° F. ***ASME-code*** exchangers have a maximum working pressure of 150 psi and a maximum working temperature of 375° F.

Note: Cooling capacity is based on changing water temp. from 60° to 120° F using 15 psi of steam.

Miniature Heat Exchangers

Their small size makes these heat exchangers good for use in areas with space constraints. The Type 316 stainless steel tube and shell offer excellent corrosion resistance. Ideal for high pressure condensing, evaporating, and heating and cooling applications. Maximum working pressure is 1,000 psi shell side; 1,500 psi tube side. Maximum working pressure for steam is 125 psi. Maximum working temperature is 800° F. Connections are NPT female.

Note: Cooling capacity is based on cooling 180° F process water with 85° F water and a 10 psi difference.

ASME-Code Expandable Heat Exchangers

Add or remove corrugated plates from these heat exchangers to expand or reduce cooling capacity by changing the surface area. Plates are not welded or brazed together—they are held together by threaded rod and separated and sealed by Buna-N gaskets for easy cleaning and servicing. Extra plates are sold separately. Outer cover is steel. Exchangers meet the American Society of Mechanical Engineers (ASME) pressure vessel U-1 code stamp for overpressurization. They are also certified to the Air Conditioning and Refrigeration Institute (ARI) Standard 400. Plates are made of Type 316 stainless steel for superior corrosion resistance. Max. working pressure is 150 psi. Max. working temperature is 248° F. Connections are NPT female.

Note: Cooling capacity is based on cooling 100° F water to 90° F using 85° F water with 10 psi pressure drop.

★ Values are for exchangers with the included number of plates installed. Values will vary if plates are added or removed.

Space-Saving High-Efficiency Heat Exchangers

Also known as brazed-plate exchangers, these are more compact with more efficient heat transfer than shell-and-tube heat exchangers. Their corrugated plates are brazed in a vacuum furnace to ensure 100% sealed construction. Channels within the exchangers allow efficient heat transfer.

Standard exchangers have a max. working temp. of 350° F. All have four 3/8″-16×1″ mounting studs, except for 35115K61, which has two 1/4″-20×3/4″ mounting studs; and 35115K66-*K67* and 3253K21, which have four 1/2″-13×1 1/2″ mounting studs. Connections are NPT male. *Copper-brazed* units have a max. working pressure of 450 psi. Plates are Type 316 stainless steel. UL listed. *Nickel-brazed* units have a max. working pressure of 300 psi. Plates are marine-alloy stainless steel.

ASME-code exchangers meet the American Society of Mechanical Engineers (ASME) pressure vessel code for overpressurization; they have a U-1 code stamp. Two tabs on the frame with mounting holes provide easy installation (3/4″ units have 9/32″ dia. mounting holes, 1″ units have 13/32″ dia. holes, and 2″ units have 1/2″ dia. mounting holes). Plates are Type 316 stainless steel. Max. working pressure is 435 psi; max. working temp. is 450° F. Connections are NPT male, except for *water-only* units, which have 1″ NPT male connections on the water side and 7/8″ male sweat connections on the cooling-fluid side.

♣ For 8546T11-T17, cooling capacity is based on chilling 100 SSU oil to 125° F using 85° F water. For 8546T21-T25, it is based on chilling water from 54° to 44° F using R22 refrigerant at 35° F.

Flat-Panel Open-Tank Heat Exchangers

Provide fast heating and cooling of liquids in open tanks. Tube passageways are embossed into both sides of the panel for smooth flow of steam and hot or cold fluids. Pipe connections are NPT male and located above the liquid level for easy removal without emptying the tank. Flow capacity is 18 gpm. Cooling capacity is not rated.

Steel heat exchangers have a max. working pressure of 300 psi and a max. working temperature of 500° F. ***Type 316L stainless steel*** heat exchangers have a max. working pressure of 250 psi and a max. working temperature of 406° F.

Exchangers *for steam heating* have a multizone coil configuration, which delivers steam simultaneously to all levels of the heater from top to bottom. Exchangers *for liquid heating and cooling* have a serpentine coil configuration.

Optional ***hanger hooks*** hang over tank edge to support heaters (use one pair per heater).

Dura-Last Heat Exchangers

For durability and long life, these brazed-plate heat exchangers are made of welded Type 316L stainless steel. They are more compact than shell-and-tube exchangers and offer better corrosion resistance and higher working temperatures than the other brazed-plate exchangers we offer. Use in liquid/liquid, gas/liquid, steam/liquid, gas/gas, and refrigerant applications. Cooling cap. is not rated. Max. working pressure is 150 psi. Max. working temp. is 500° F. Connections are NPT male. *Note:* Connections are on the ends, except for 35095K61, which has them on the top.

Wrap-Around Drum Heat Exchangers

Flow hot water, oil, or steam through these coils to heat the contents of your 55-gallon drums. Cool using cold water or refrigerant. They wrap around the outside of the drum (up to 22 3/4″ dia.) and clamp for a snug fit. Made of steel. Surface area is 4.13 sq. ft./section. Cooling and flow cap. are not rated. Max. working pressure is 150 psi. Those *with hose assembly* have a max. working temp. of 380° F. Those *without hose assembly* have a max. working temp. of 500° F. ***Single-section units*** are 8 1/2″ high. Inlet and outlet connections are 1/2″ NPS (male for heaters *with hose assembly*; female for heaters *without hose assembly*). ***Three-section units*** are 32 1/4″ high. Inlet and outlet connections are 1/2″ NPT female.

Three Sections with Hose Assembly

	w/Hose Assembly		w/out Hose Assembly	
Single-Section Unit	3550K12	$1,237.40	3550K11	$952.06
Three-Section Unit	3550K19	3,101.62	3550K18	2,926.88

Portable Sampling Heat Exchangers

Test high-temperature liquid samples by first cooling them to safe levels. Sample liquid enters the steel shell and flows through a series of coiled tubes. Cold water from an external water supply flows around the tubes, reducing the temperature of the liquid so it can be drawn and safely tested. Cooling and flow capacities are not rated. Connections are NPT.

3613K26 and 3613K22

Fan-Cooled Heat Sinks

A built-in fan directs hot air away from the heat sink to efficiently cool any liquid running through the tubes. The heat sinks also have flanges with 13/64″ wide slots for mounting to a frame or cabinet (fasteners included). Fans operate on 115 VAC, single phase and include a 24-26″ power cord with two-prong plug. They're UL recognized and CSA certified. For maximum heat transfer, the exchanger tubes (copper as well as stainless steel) are formed into copper cooling fins. Maximum working pressure is 150 psi. Maximum working temperature is 400° F.

Copper Tubes—For use with water.

Type 316L Stainless Steel Tubes—For use with corrosive as well as high-purity solutions, such as deionized water.

To Order: Please specify tube ends: plain or with a 37° flared fitting.

■ Overall size does not include tube ends.

Fan-Cooled Heat Sinks w/Internal Pump

A built-in pump and internal reservoir ensure a consistent flow of cooled fluid, while a high-efficiency, fan-cooled copper heat exchanger dissipates unwanted heat without using refrigerant. The entire unit is self-contained in a cabinet housing for quiet operation and to keep out debris. Ideal for liquid-to-air cooling of water and other noncorrosive fluids in applications where precise temperature control is not required. All operate on 115 VAC, single phase and include a 7 1/2-ft. power cord with three-prong plug. Pumps have a high-output positive-displacement pump and a max. pressure of 60 psi, unless noted. Max. working temperature is 131° F. Connections are NPT female.

▲ Cooling capacity based on water with an initial temp. differential of 77° F. ★ Has a centrifugal pump and max. pressure of 15 psi.

High-Capacity Fan-Cooled Heat Sinks

More surface area and larger fans give these heat sinks more cooling capacity than the fan-cooled heat sinks on this page. Use to cool hydraulic and lubricating oils in air compressors and hydraulic cylinders without the expense and space requirements of a cooling tower. Heat sinks have a rugged, brazed aluminum bar and plate construction with louvered fins for excellent heat transfer. The fan operates on 208-230/460 VAC, three phase and includes a junction box for hardwiring. Max. working pressure is 250 psi. Max. working temp. is 250° F. 3579K15 and *K16* have a 2″ four-bolt SAE flange connection.

Radiator-Style Heat Sinks

Dozens of heat-dissipating aluminum fins and copper coolant tubes quickly transfer unwanted heat to the atmosphere. Designed for cooling oil, these heat sinks are not to be used with water. Max. working pressure is 300 psi. Max. working temperature is 350° F. Connections are NPT female.

Cooling and flow capacities are based on 50 SSU oil, 1,000 feet per minute of air, 50° F initial temperature difference, and 10 psi pressure drop.

Mounting kits (sold separately) are recommended for installation. They include two each of the following: rubber blocks, carriage bolts, nuts, flat washers, and locknut washers.

Cooling Cap., Btu/Hr.	Flow Cap., gpm	Pipe Size	Overall Size, Ht. × Wd. × Dp.	Mounting Kits Needed		
3,400	7	1/2″	4 1/2″ × 15″ × 1 1/2″	2	3525K11	$124.44

Strap-On Heat Sinks for Pipes

Cool fluids without breaking into your pipeline. Simply clamp these aluminum heat sinks to your existing pipe and their fins provide plenty of surface area to transfer heat from your process to the atmosphere.

Standard heat sinks have three fins and two 5/8″ slots for pipe clamps (not included).

High-efficiency heat sinks have more surface area due to their 11 densely spaced fins. They also have slots in the frame that accept 8-32 button head screws for attaching a fan (not included). They include straps for mounting to the pipe and thermal grease for improved heat transfer.

● Has five 1″ fins and six 1 1/2″ fins.

Flat-Surface Heat Sinks

Standard Pin Style

Cool flat metal surfaces and liquid processes with these easy-to-use black-anodized aluminum heat sinks. They can also be used to cool electrical panels and components. Use the included thermal tape to mount. ***High-efficiency fin-style*** sinks have more surface area to dissipate heat more efficiently.

	Overall Size, Lg. × Wd. × Ht.	No. of Pins/Fins		
Standard Pin Style	1″ × 1″ × 3/8″	49 Pins	8822T11	$6.60

High-Efficiency Fin Style	2″ × 2 5/8″ × 5/16″	34 Fins	8822T13	10.48

Heat-Transfer Fluids

With an added corrosion inhibitor, these fluids are perfect for both heating and cooling applications in heat exchangers. Containers are five gallons each. Temperature ranges are for closed systems only.

Type	Temp. Range (°F)		
Propylene Glycol	–20° to +250°	8673T21	$170.34
Ethylene Glycol	–40° to +250°	8673T22	160.32

Cold Plates

Air-cooled heat sinks don't always do the trick—that's why we offer these cold plates that use cold liquid to provide contact cooling. All have U-shaped tubes (see table for material) that pass through a thermally conductive aluminum plate. Connect them to process chillers and liquid-to-air cooling systems for a continuously cooled surface. The plates can be drilled or tapped for easy mounting. Maximum temperature is 392° F.

Cold plates ***with copper tubes*** are recommended for use with water. Cold plates ***with Type 316 stainless steel tubes*** are for use with corrosive as well as high-purity fluids, such as deionized water.

About Liquid Chillers

Using refrigerant, liquid chillers provide constant, uniform cooling to temperature-sensitive equipment such as spot-welding systems, molds, lasers, X-ray diffraction equipment, and water jackets. The chillers we offer are designed to cool either water or water mixed with ethylene or glycol. They can be used for cooling metalworking coolants or fluids.

To select a liquid chiller, you need to determine the amount of heat (referred to as heat load) you need to remove from your process to maintain the required temperature. Heat load is typically expressed in Btu/Hr. Use the following formula to determine your heat load (Btu/Hr.):

$$\textit{Btu/Hr.} = \textit{gph} \times \textit{Wt.} \times \textit{SH} \times \Delta T\ °F$$

gph = Flow rate of liquid being cooled
Wt. = Weight of cooling liquid per gallon
SH = Specific heat of cooling liquid
ΔT °F = Difference between cooling liquid inlet and outlet temperature

For example: Let's say you need to cool water that's flowing at a rate of 120 gallons per hour ***(gph)***. Water has a weight ***(Wt.)*** of 8.34 lbs. per gallon and a specific heat ***(SH)*** of 1. You've determined the difference in temperature ***(ΔT °F)*** between the inlet (supply) liquid and the outlet (return) liquid is 6° F. Now let's plug all of this information into the formula: ***gph (120) × Wt. (8.34) × (SH)1 × ΔT °F (6) = Btu/Hr. (6,005).*** You will need to select a liquid chiller with at least 6,005 Btu/Hr. to remove heat from your process.

High-Flow Circulating Process Chillers

11,360 Btu/Hr.

These self-contained chillers are equipped with a heavy duty pump to achieve higher flow rates than our other chillers. Cooling liquid temperature is adjustable and thermostatically controlled from 50° to 90° F. They cool water mixed with a maximum of 50% inhibited ethylene or propylene glycol. All chillers have an air-cooled condenser, electrical controls with shut-off switch, and a liquid-level sight glass. Connect them to coolant lines and a power source to get them up and running. For indoor use only.

Chillers rated 5,040 and 11,360 Btu/Hr. contain R134A refrigerant and have casters and NPT female connections. These units have an internal tank made of Type 304 stainless steel and can cool plain water. They also include a 6-ft. power cord with a NEMA 5-20 plug (see page 787 for illustrations). Chillers rated 24,000 Btu/Hr. and up contain R407C refrigerant and have an internal tank made of high-density polypropylene. They have screw terminals for hardwiring, NPT female connections, a cleanable air-intake filter, and a manual bypass valve to adjust flow. These units cannot be used to cool plain water.

♦ Rated at 65° F liquid temperature; 90° F ambient temp.

Low-Temperature Circulating and Open-Loop Process Chillers

6,000-12,000 Btu/Hr.

For extra-cool applications, these compact and efficient chillers offer temperature control from 30° to 100° F. They cool water or water mixed with a maximum of 30% inhibited ethylene or propylene glycol. Ideal for applications where a fan cannot be used to cool, such as lasers. All have an air-cooled condenser and a low-pressure safety control (unless noted). Chillers rated 20,000 Btu/Hr. and up also have a high-pressure safety control and a relief valve that ensures pump will not "dead head" if flow is restricted (in other words, the pump will continue to pump). Choose from closed-circulating and open-loop types. Connections are NPT female. For indoor use only. All have screw terminals for hardwiring, unless noted. Chillers contain 134A refrigerant.

Circulating liquid chillers have an internal tank (except for the 3,000 Btu/Hr. model, which has an external tank on the back) and are for closed-loop cooling of liquids in process equipment. ***Open-loop liquid chillers*** are perfect for cooling liquids in a process bath, coolant spray system, or an external tank. Furnished without a tank.

♣ Rated at 68° F liquid temp.; 80° F ambient temp. ▲ Includes 10-ft. power cord with standard three-prong plug. No low-pressure safety control. Can be used in circulating and open-loop applications. ♥ Pump capacity is 3 gpm @ 10 psi.

Precision Circulating Process Chillers

Using refrigerant and internal heaters, these chillers maintain an accurate and precise temperature between 14° and 158° F. Ideal for cooling water or ethylene glycol. An LED display shows temperature, pressure, and flow and lets you manage them for precise control of your process. All have a 6-ft. power cord and a 1.1-gallon internal tank. Max. flow is 3.5 gpm. Refrigerant is 134A. Connections are NPT female. For indoor use only. Chiller rated 2,728 Btu/Hr. has a NEMA 5-15 plug. Chiller rated 4,092 Btu/Hr. has a NEMA 6-20 plug. Chillers rated 8,525 Btu/Hr. and up have a NEMA 6-15 plug (see page 787 for illustration).

For pipe size information, see pages 2-3.

Shatter-Resistant Plastic Domed Sights

Threaded

Bolt On

Press Fit

View these domed sights from any angle. And since the dome is plastic, they're more shatter resistant than glass. Ideal for water and hydraulic oil in radiators, oil sumps, and reservoirs. Dome is clear SAN (styrene acrylonitrile) plastic, seal is rubberized cork (unless noted), and temperature range is 0° to 160° F.

Threaded sights have NPT male threads.

Bolt-on sight requires socket-head cap screws (not included).

Press-fit sights simply slide into a nonthreaded hole; hold them in place with a sealant (not included, see pages 3418-3419). They include a neoprene seal. Do not use in pressurized tanks.

Shatter-Resistant All-Plastic Sights

BSPP Male

Shatter resistant and suitable for water and hydraulic oil. Body and window are nylon; seal is Buna-N. ***BSPP male*** sights have a max. temp. of 194° F. Not rated for pressure. ***NPT male*** sights have a max. pressure of 4 psi at 70° F. Temp. range is –20° to +210° F.

High-Pressure Glass Sights

w/Reflector

For very high-pressure tanks, these sights have a glass window fused to a metal body. Connections are NPT male. ***Sights without reflector*** are best for viewing clear liquids. ***Sights with reflector*** allow better viewing of dark liquids.

Nickel-Plated Steel—Use with compressed air and hydraulic oil. Window is soda-lime glass. Temperature range is –40° to +500° F.

Type 2205 Stainless Steel—Even better corrosion resistance than Type 316 stainless steel. Use with water, compressed air, and hydraulic oil. Window is borosilicate glass. Temp. range is –22° to +536° F.

Glass Sights

Without Reflector

With Reflector

A glass window makes these sights great for inspecting tanks, gear cases, bearing housings, vessels, and mixers.

Sights without reflector are best for viewing clear liquids. ***Sights with reflector*** allow better viewing of dark liquids, especially in poorly lit areas.

Brass and ***High-Pressure Brass—***Use with hydraulic oil. Window is soda-lime glass; seal is Buna-N. Temp. range is –40° to +180° F. Connections are NPTF male (Dryseal).

Aluminum and ***High-Temperature Aluminum—***Withstand higher pressures than brass sights. Use in hydraulic systems with water and hydraulic oil. Connections are BSPP male. Min. temp. is not rated.

Aluminum sights have a soda-lime glass window and Buna-N seal. Max. temp. is 212° F. *High-temperature aluminum* sights have a borosilicate glass window and a fluoroelastomer seal. Max. temp. is 356° F.

Plated Steel and ***Easy-to-See Plated Steel—***Window is fused to the body for long life. Use with water and hydraulic oil. Body is zinc plated for 3/8" to 3/4" sizes; nickel plated for 1" and up. Window is soda-lime glass. Temp. range is 33° to 250° F. Connections are NPT male, unless noted.

Easy-to-see plated steel sights have a reflector plus an aluminum ball to give you maximum visibility for hard-to-see liquids.

◆Connections are NPTF (Dryseal) male.

Sure-Seal Through-Wall Glass Sights

Without Reflector

A nonthreaded hole is all you need to install these sights. They have straight (UNS) threads and attach to the tank with the included nut. Installation requires access to the inside of the tank; tank walls cannot be more than 1/4" thick. (For information about through-wall fittings, see page 115.) Use with hydraulic oil. Sights have an aluminum body, a soda-lime glass window, and Buna-N seal. Temp. range is –40° to +180° F. ***Sights with reflector*** allow better viewing of dark liquids, especially in poorly lit areas.

For Hole Size	Hex Wd.	Window Dia.	Max. psi @ 70° F	*Without Reflector*		*With Reflector*

2 3/8"	2 5/8"	1 7/8"	10	1116K25	36.54	1116K35	39.88

For pipe size information, see pages 2-3.

Large-View Weld-On Glass Sights

Weld these stainless steel sights to any single-wall tank to observe its contents—no threading required. The sights are great for looking into process vessels, silos, mixers, and separators. All have a borosilicate glass window to withstand high temperatures.

With Easy-Access Window

Sights with an ***easy-access window*** allow you to unscrew the viewing window from the base for access to your tank or to clean the glass. Use with water and compressed air. Body is Type 316L stainless steel. Seal is silicone. Temperature range is –20° to +392° F. They meet DIN 11851 (dairy fitting standard).

Sight with a ***bolt-on window*** can be used with hydraulic oil. Body is Type 304 stainless steel. Seal is FDA-compliant silicone. Temperature range is –40° to +300° F.

Plastic Sights for Sanitary Quick-Clamps

Sight

Sight shown assembled with gasket, quick clamp, and tube fitting (all sold separately on pages 208-210)

Sanitary quick-clamps come apart and go back together easily for clean-in-place applications. Use with water. For sanitary quick-clamp fittings, see pages 208-210. Sights are made entirely of polycarbonate for impact-, shatter-, and crack-resistance. Temperature range is –40° to +240° F.

Extreme-Temperature Glass Sights for Ovens and Furnaces

For ovens, kilns, and furnaces, these glass sights—also known as peep sights—resist temperatures up to 1600° F. Not rated for use with liquids or compressed air. Sights have a steel body, a quartz window, and a flexible graphite seal. Connection is NPT male.

Pipe Size	Hex Wd.	Window Dia.	Max. psi @ 1600° F

Oil-Level Indicators

With two tank connections, these level indicators are great for pressure-rated applications. All have an aluminum guard (unless noted) and Buna-N seals. Use with hydraulic oil.

(1) Glass Indicators

These indicators have an easy-view red line on their borosilicate glass sight. Thread into 1/2″-20 UNF holes—there's no need to get inside your tank to install. Temperature range is –40° to +250° F.

(A)	O'all Ht.	Window Ht.	(B)	Max. psi @ 70° F		
3″	4 5/8″	1 1/2″	1 1/8″	290	1188K18	$21.95

12″	13 5/8″	10 1/2″	1 1/8″	270	1188K25	49.09

(2) Glass Indicators with Dial Thermometer

You'll get accurate temperature readings with these gauges—each has a dual-scale stainless steel thermometer with a 1 3/8″ dia. dial that reads 50° to 300° F/10° to 150° C. The sight is borosilicate glass with a red line to enhance liquid-level visibility. Maximum pressure is 125 psi at 70° F. Temperature range is –40° to +225° F. ***Front-mount gauges*** thread into two 1/2″-20 UNF holes—there's no need to get inside your tank to install. ***Back-mount gauges*** require you to tighten the nuts (included) from the inside of your tank. Use on open tanks with walls up to 3/4″ thick. Two 33/64″ dia. holes for mounting are required.

(A)	O'all Ht.	Window Ht.	(B)	*Front Mount*		*Back Mount*

(3) Glass Indicators with Linear Thermometer

With just one gauge, you can check the level and temperature of the liquid in your tank. Sight is borosilicate glass. Thread into 1/2″-20 UNF holes or use the included nuts to mount to tanks with walls less than 1/2″ thick (requires access to the inside of your tank). Temperature range is –40° to +180° F for 1305K61 and –40° to +220° F for 1305K62 and 1305K63.

(4) UV-Resistant Nylon Indicators with Linear Thermometer

For outdoor applications, these indicators have a UV- and shatter-resistant nylon body and sight. They also have a built-in thermometer so you can check the level and temperature of your liquid with just one gauge. Thermometer is dual scale and reads 32° to 212° F/0° to 100° C. Thread into 1/2″-13 UNF holes or use the included nuts to mount to tanks with walls less than 3/4″ thick (requires access to the inside of your tank). Temperature range is –65° to +212° F.

12″	12 7/8″	10 5/16″	1 1/8″	125	1192K15	27.47

For pipe size information, see pages 2-3.

Vented Oil-Level Indicators

For nonpressure applications such as gear boxes, crank cases, and other reservoirs, these indicators require only one tank connection. A hole (vent) in the top prevents pressure buildup. For optimum viewing, the gauge shields rotate 360°. Use with hydraulic oil. All have a brass connection and gauge shield, a soda-lime glass sight, and Buna-N seals. They thread into the outside of your tank—access to the inside of your tank is not required. Temperature range is –40° to +250° F. Connections are NPTF (Dryseal).

(1) Male Straight

Gauges with filter keep contaminants out with a 40-micron filter.

(2-5) Male Elbow

(4) With Drain—Great for viewing oil level and draining from the same connection.
(5) With Dial Thermometer—Thermometer is 1 3/8" diameter, dual scale, and reads 50° to 300° F/10° to 150° C.

Oil-Level Indicators with NPT Connections

With Dial Thermometer

Equipped with brass pipe connections that fit in any tank with NPT female threaded holes, these indicators provide easy mounting in tank walls that are 1/2" to 3/4" thick. All have an aluminum body, a borosilicate glass sight with an easy-view red line, and Buna-N seals. Access to the inside of your tank is not required to install. Temperature range is –40° to +250° F.

Gauges with dial thermometer have a 1 1/2" dia. dual-scale thermometer that reads 50° to 300° F/10° to 150° C.

To Order: Please specify pipe size: 1/4", 3/8", 1/2", or 3/4" NPTF (Dryseal) male.

For pipe size information, see pages 2-3.

Flexible Vinyl Liquid-Level Indicators

Thanks to the flexible, clear vinyl sight, you can mount these indicators on curved and uneven surfaces. Bend radius is 3¼″. Indicators have aluminum end blocks with steel connections and Buna-N seals. Thread into a tank with two ½″-20 UNF holes—access to the inside of your tank is not needed to install. Use with water and hydraulic oil. Maximum temperature is 165° F; minimum temperature is not rated.

Spill-Proof Liquid-Level Indicators

A magnetic float contained inside a stainless steel tube means there's no glass; thus, there's no chance of glass breaking and spilling your liquid. A highly visible fluorescent magnetic scale provides a quick, easy-to-see reading, even from a distance. Indicators have a Type 316 stainless steel frame and float, fluoroelastomer seal, removable bottom flange, and ½″ NPT female drain plug. Connections are ½″ NPT male; access to the inside of your tank is not needed to install. Temperature range is –40° to +300° F.

Indicators for oil-based liquids are for liquids with a specific gravity of 0.83 to 0.88 such as hydraulic oil and diesel fuel.

Indicators for water-based liquids are for liquids with a specific gravity of 0.93 to 1.1 such as water and glycol.

(A)	O'all Ht.	Scale Ht.	(B)	Max. psi @ 70° F	For Oil-Based Liquids		For Water-Based Liquids	
12″	20″	14″	3½″	150	3332K42	$735.50	3332K41	$735.50

36″	44″	38″	3½″	150	3332K48	951.42	3332K47	951.42

Liquid-Level Indicators with Shutoff Valves

In case of glass breakage, these heavy duty liquid-level indicators have shutoff valves so you can change the glass without removing the indicator from your system. All have a borosilicate glass sight. Connections are NPT male.

Indicators with safety spill control have a ball check in both valves for quick, temporary shutdown if the gauge glass should break. *Note:* Valves must be closed manually for permanent shutoff.

1 ***Clog-resistant brass*** indicators have a needle point in the stem of the lower shutoff valve that clears out the orifice as the valve is closed. Use with water, salt water, hydraulic oil, and steam. They include a ¼″ dia. drain cock, fluoroelastomer gaskets, and graphite stem packing.

2&3 ***Compact elbow-style bronze*** indicators are designed for confined spaces with a 90° angle shutoff valve for easy access. Use with water and steam. They include EPDM gaskets and PTFE stem packing.

4 ***Type 316 stainless steel*** indicators are great for use on expansion tanks. Use with water, hydraulic oil, and steam. They include a stainless steel drain valve, Hypalon-reinforced PTFE gaskets, and PTFE stem packing.

5 ***Naval brass*** indicators are ideal for use with water and hydraulic oil. Gaskets and stem packing are fluoroelastomer.

Indicators for pressure tanks have an upper ball check at the top pipe connection, and a lower ball check in the valve stem at the base of the glass sight.

Indicators for gravity tanks have ball checks located at the pipe connections.

6 ***ASME-rated Type 316 stainless steel*** indicators conform to ASME A18 requirements and are ideal for alcohol-based solvents, acetic acid, and ketones, as well as water, hydraulic oil, and steam. They have Type 316 stainless steel ball checks, a ball-valve-style drain, Hypalon-reinforced PTFE gaskets, and PTFE stem packing.

Build-Your-Own Liquid-Level Indicators

(1) Select a Valve Pair

Includes two valves with automatic shutoff, aluminum handles, a neoprene gasket, graphite-composite stem packing, and a 3/8″ NPT female drain cock with thumb-wheel handle. Connections are NPT male. Not for steam service.

Pipe Size	For Gauge Glass Size, OD × Wall Thick.	Bronze Max. psi @ 300°F★	Bronze Pair		Ductile Iron Max. psi @ 300°F★	Ductile Iron Pair		Type 316 Stainless Steel Max. psi @ 300°F★	Type 316 Stainless Steel Pair

★ Pressures listed are subject to the limitations of the gauge glass used.

(2) Select Your Gauge Glass

See the Tubular Gauge Glass on this page for our complete selection of gauge glass. Determine the glass length you'll need by subtracting 2″ from the desired center-to-center length between your two valves. Then choose your gauge glass based on the nonsteam service pressure listed.

(3) Select a Set of Guard Rods

Choose *bronze rods* for bronze and ductile-iron valves and *Type 303 stainless steel rods* for Type 316 stainless steel valves. All are 3/16″ dia. Set includes four rods, which is enough for one complete indicator. **Also Available:** Guard rods in lengths not listed here. Ask for 3713K888 and specify length and material (bronze or Type 303 stainless steel).

Tubular Gauge Glass

Clear Glass

Red-Line Glass

Made of borosilicate glass, this gauge glass stands up to rapid temperature changes. It offers good resistance to corrosion and will remain clear; it has no graduations. Cut to size with a glass tube cutter (see 36755A21 on page 2339). Length tolerance is ±1/16″.

Red-line glass is transparent like the clear glass, but a red line between two white lines makes it easier to see your liquid level.

Flat Oval Gauge Glass and Gaskets

Use this flat and reflective borosilicate gauge glass in armored-style liquid-level gauges. Glass is 1 5/16″ Wd. × 11/16″ Thick. Temperature range is –425° to +470° F. Glass meets DIN 7080 and 7081, JIS B 8211, and MIL-G-16356D.

Gaskets—Made of 1/16″ thick rubber and fiber. Suitable for temperatures between –40° and +600° F and nonsteam service pressures up to 1,200 psi. For other gasket materials, see pages 3474-3481.

Liquid-Level Gauges

Don't worry about gears, cams, and magnets wearing out—these gauges are fully mechanical and float operated. They have a threaded aluminum connection that screws into the opening of your tank and a polyethylene float that's connected to a liquid-level indicator. The indicator is 4″ long and has a cellulose-acetate sight with a UV inhibitor. The float rod measures half the length of the drum/tank depth. Use with water and hydraulic oil. Maximum tank pressure is 70 psi. Maximum temperature is 110° F. Minimum temperature is not rated.

Gauges for Drums

For 30-Gallon Drums—Indicator is graduated in gallons, liters, and volume fractions (Full, 7/8, 3/4, 5/8, 1/2, 3/8, 1/4, 1/8, and Empty).

For 55-Gallon Drums—Indicator is graduated in gallons, liters, and volume fractions (Full, 7/8, 5/8, 3/8, 1/8, and Empty).

For Drum Size	For Drum Depth	Fits 3/4″ NPT Opening		Fits 2″ NPT Opening

Indicator for Tanks

Gauges for Tanks

Indicator is graduated in volume fractions (Full, 7/8, 3/4, 5/8, 1/2, 3/8, 1/4, 1/8, and Empty). Float rod is galvanized steel.

Gauges are available in 1″ increments at any length between 6″ and 72″. **To Order:** Please specify exact tank depth within the range listed.

Available Tank Depths	Fits 1 1/2″ NPT Opening		Fits 2″ NPT Opening	
6″ through 12″	3711K7	$41.85	3711K8	$41.85

47″ through 60″	3711K41	36.85	3711K61	36.85
61″ through 72″	3711K3	53.15	3711K5	53.15

Liquid-Level Gauges for Fuels

Designed specifically for use with gasoline, diesel fuel, and fuel oil, all gauges have a nitrile rubber float connected to a 2″ dia. aluminum dial with a clear thermoplastic lens. The dial reads in volume fractions (Full, 3/4, 1/2, 1/4, and Empty). Temperature range is –40° to +158° F. Connections are NPT male.

Top Mount with Center Shaft—The float travels on the center shaft; the shaft is brass and measures 1/2″ to 3/4″ shorter than the tank depth to prevent it from touching bottom. Guide rods are zinc-plated steel.

Top Mount with Rod—Have an aluminum float rod connected to a 3″ long stem. Float is 1 3/8″ Dia. × 1 3/4″ Lg. UL listed MH8786 for use with gasoline, diesel fuel, and fuel oil.

Side Mount with Rod—Have an aluminum float rod connected to a 4″ long support tube. Float is 1 3/8″ Dia. × 1 3/4″ Lg. UL listed MH8786 for use with gasoline, diesel fuel, and fuel oil.

1 1/4″	Up to 50″●	10	3717K66	50.46
1 1/2″	Up to 21 1/2″●	10	3717K67	50.46

● For shallower tanks, cut the rod to 1/2″ to 1″ shorter than the tank depth to prevent it from touching bottom.

Precision Liquid-Level Gauges

Get a precise reading of the liquid level in your tank. All gauges have a 2″ aluminum NPT male connection and are for use with water and hydraulic oil.

Digital—These have a 4-digit LCD that's accurate to 0.1″. They have a corrosion-resistant PVC housing and a polyurethane-coated cork float attached to a nylon-coated Type 301 stainless steel cable. Gauges operate on a 9-volt lithium battery (included) and automatically turn off when not in use. Overall size is 3″ Dia. × 4 3/4″ Ht.; float is 8 1/2″ long.

Digital ***Dial***

Dial—Reading is in 1/8″ increments; the small hand reads feet, the large hand reads inches. Includes decals to mark high and low levels. The dial face is 4 7/8″ dia. and is vapor tight. Gauge housing is anodized aluminum; the float and cable are Type 304 stainless steel. Height from the top of the dial to bottom of threads is 8 7/16″; float is 7 3/4″ long.

For Tank Depth	Max. Tank Pressure, psi	Temp. Range (°F)		
Digital				
4 Ft.	Not rated	+30° to +140°	8212T17	$403.61
5 Ft.	Not rated	+30° to +140°	8212T18	403.61
Dial				
12 Ft.	5	–10° to +150°	6151T83	486.27

Pop-Up Full-Tank Indicators

A pop-up indicator lets you know when your tank is almost full. Use on vertical tanks and drums with a 3/4″ NPT female opening. Indicators are made of high-density polyethylene. Use with water and hydraulic oil. Max. pressure is not rated. Temperature range is 0° to 120° F.

O'all Ht.		
5″	3780K26	$12.15
11″	3780K27	17.45

For pipe size information, see pages 2-3.

Vented Liquid-Level Gauges for 55-Gallon Drums

For accurate measurement of liquid in 55-gallon drums, these gauges have an aluminum frame and a soda-lime glass sight that's graduated in gallons and liters. The sight also has two sliding indicators for marking the specific levels you choose. Gauges vent to the atmosphere. Use with water and hydraulic oil.

Gauges have TFE O-rings and are not rated for pressure. Temp. range is 32° to 150° F. Connections are ¾" NPT male.

Drop-In Liquid-Level Transmitters

Standard

Also known as level loggers, level sensors, and pressure transducers, these easy-to-use submersible transmitters sit at the bottom of your tank so they don't require a process connection—simply drop in your tank. They include 40 feet of cable and have a 4-20 mA output signal for remote use. Transmitters run on 12-40 VDC and are accurate to ±0.25%. Body is Type 316L stainless steel and seal is fluoroelastomer. Temperature range is –10° to +175° F. CSA certified and FM approved for Class I, II, and III; Division I; Groups A-G.

Standard—Use in applications with debris-free water. A nose cone provides the sensing element with additional protection against contact.

Clog Resistant—The open-face sensing element avoids clogging and sludge buildup when used in water with particulate and sewage.

To Order: Please specify liquid-level range from those listed below.

Available Liquid-Level Ranges, feet of water	*Standard*		*Clog Resistant*	
0-3, 0-5, 0-10, 0-15, 0-30	**3450K71**	$496.68	**3450K72**	$576.37

High-Performance Compact Flow Sights

1/4" to 3/4" Sizes

1" to 1 1/2" Sizes

For compact flow sights that can handle extreme conditions, set your target on these "bull's eye" sights. Use with water, compressed air, and hydraulic oil. Flow can move in either direction. Mount at any angle. Connections for all are NPT female.

High-pressure sights have a borosilicate glass window and a PTFE seal. Maximum pressure is 600 psi at 70° F. Temperature range is –40° to +450° F. FM approved.

High-temperature sights are rated between –40° and +850° F. They have a quartz glass window and a graphite seal. Maximum pressure is 450 psi at 70° F for ½" and ¾" pipe size sights, and 300 psi at 70° F for 1" and 1½" pipe size sights.

Flow Sights

A

B

C

Front and back tempered-glass windows permit backlighting, so flow variations are easy to see—even through dark, murky liquids. All have a soda-lime glass window, except high-pressure flow sights, which have a borosilicate glass window. All are for use with water and hydraulic oil except Type 316 stainless steel sights, which are for use with water only. Connections are NPT female.

(A) Flow Sights—Flow can move in either direction. Mount at any angle. *Bronze* sights have Buna-N seals. Temperature range is –15° to +200° F. *Type 316 stainless steel* sights have PTFE seals. Temperature range is 40° to 200° F.

(B) Flow Sights with Indicator—Have a Type 304 stainless steel flapper that shows the movement of the liquid. Flow can move in one direction only. Mount at any angle. *Standard* sights have Buna-N seals and a temperature range of 0° to 250° F. *High-temperature* sights have fluoroelastomer seals. Temperature range is 0° to 400° F.

(C) High-Pressure Flow Sights with Indicator—A Ryton flapper shows the movement of the liquid. Seals are fluoroelastomer. Flow can move in either direction. Mount horizontally. Temperature range is 0° to 150° F.

Tube-Style Flow and Level Sights

A translucent tubular window provides an unobstructed 360° view for monitoring liquid flow in a pipeline or liquid level in a tank. Sights have Type 316 stainless steel fittings and an FEP (fluorinated ethylene propylene) thermoplastic window for excellent corrosion resistance. Use with water and hydraulic oil. Flow can move in either direction. Mount at any angle. Maximum pressure is 150 psi. Temperature range is –100° to +250° F. Connections are NPT male.

High-Visibility Rotary-Indicating Flow Sights

With Front Window

With Front and Back Windows

Check flow with just a quick glance—a rotor inside the window spins as liquid flows past. Flow moves in either direction, except Style E, in which flow moves right to left only; and all mount at any angle, except Styles C and D, which must be horizontal. Connections are NPT female. All are for use with water and hydraulic oil except Style F which is for use with water. Glass windows give a clearer view than polysulfone windows. Sights *with front and back windows* allow back-lighting for better viewing of dark liquids.

(A) Bronze with Glass Windows—Seals are Buna-N; rotor is acetal. Max. pressure is 125 psi at 70° F. Temp. range is –30° to +200° F.

(B) Brass with Polysulfone Window—Seals are fluoroelastomer; rotor is nylon. Max. pressure is 200 psi at 70° F. Temp. range is –20° to +212° F.

(C) Type 316 Stainless Steel with Polysulfone Window—Seals are fluoroelastomer; rotor is nylon. Max. pressure is 200 psi at 70° F. Temp. range is –20° to +212° F.

(D) Glass-Filled Polypropylene with Polysulfone Window—Seals are Buna-N; rotor is nylon. Max. pressure is 100 psi at 70° F. Temp. range is –20° to +180° F.

(E) High-Pressure Bronze with Glass Windows—Seals are fluoroelastomer; rotor is Ryton. Max. pressure is 400 psi at 70° F. Temp. range is 0° to +350° F.

(F) Type 316 Stainless Steel with Glass Windows—Seals are PTFE; rotor is Type 316 stainless steel. Max. pressure is 125 psi at 70° F. Temp. range is 40° to 200° F.

Ball-Indicating Low-Flow Domed Sights

Brass

Bronze and Type 316 SS

Get an indication of flow at even the slightest amounts. These flow sights have a domed window and balls that indicate when flow is present. Flow can move in either direction. Connections are NPT female.

Brass sights have three balls—two white polyethylene and one green acrylic—that make viewing especially easy. Use with water. Mount horizontally or vertically. Unit can also be panel mounted with a 2 3/8" cutout. Sights have Buna-N seals and a self-cleaning polycarbonate window. Maximum pressure is 150 psi at 70° F. Temp. range is 35° to 150° F.

Bronze and ***Type 316 stainless steel*** sights have a white polyethersulfone ball and a borosilicate glass window. Use with water, compressed air, and hydraulic oil. Mount horizontally. Maximum pressure is 100 psi at 70° F.

1/2" *pipe size* sights have fluoroelastomer seals. Temperature range is 14° to 250° F.

3/4" *pipe size* sight has Buna-N seals. Temperature range is 14° to 180° F.

Type 316 stainless steel sight resists corrosion.

Slim-Line Flow Sights

With Indicator

These slender sights fit nicely into tight spots. Mount horizontally or vertically. All have a tubular borosilicate glass window that can be viewed from both the front and back. Use with hydraulic oil. Seals are Buna-N.

Brass—Temperature range is –40° to +180° F. Connections are NPTF (Dryseal) female. *Sights with indicator* have a white nylon ball for easier viewing of dark fluids and fluids in dimly lit areas.

Steel—Body is plated steel. Maximum temperature is 225° F. Minimum temperature is not rated. Connections are NPT female.

Slim-Line Sanitary Quick-Clamp Flow Sights

Sanitary quick-clamp connections make these sights great for food and dairy applications (see pages 208-210 for quick-clamp fittings). They are electropolished to eliminate any cavities that can collect debris and bacteria. Sights also can be used with water and compressed air. Flow can move in either direction and you can mount at any angle. Body is Type 316L stainless steel and window is borosilicate glass. Seals are made of EPDM, are FDA compliant, and meet USP (United States Pharmacopeia) Class IV standards for food applications. Temperature range is –20° to +300° F.

For pipe size information, see pages 2-3.

Full-View Flow Sights

Without Indicator *With Indicator*

A 360° window provides an unobstructed view of fluid movement, clarity, and color. Flow can move in either direction. Mount at any angle, except sights with indicator, which must be horizontal or vertical.

Bronze sights withstand high temperatures. They have neoprene seals and a borosilicate glass window. Use with water. Temperature range is –20° to +250° F. Connections are NPT female.

Brass sights with indicator have a white nylon ball to indicate when flow is present. Seals are Buna-N, and window is borosilicate glass. Use with hydraulic oil. Temperature range is –40° to +212° F, unless noted. Connections are NPTF (Dryseal) female.

Type 316 stainless steel sights are for corrosive applications. They have PTFE seals and a borosilicate glass window. Use with water. Temperature range is 40° to 200° F. Connections are NPT female.

PVC sights provide excellent chemical resistance. They have fluoroelastomer seals and an acrylic window. Use with water. Temperature range is 40° to 140° F. Connections are NPT female.

Flanged Full-View Flow Sights

For large pipelines and high flow, these sights have easy-to-connect ANSI Class 150 flanges. Use with water, compressed air, and hydraulic oil. Flow can move in either direction; mount at any angle. Inner window is borosilicate glass; sights also have a protective plastic outer shield. Seals are PTFE.

Flow Sight for Tubing

Made of clear polycarbonate that can be viewed from both the front and back, this sight has a white nylon ball that rotates in the circular channel to indicate flow. Use with water and compressed air. Flow can move in one direction only.

Sight is 2 15/16″ Lg. × 2 3/16″ Ht. × 1/2″ Dp. Mount at any angle. Maximum pressure is 10 psi at 70° F. Temperature range is 32° to 180° F. Has barbed connections that accept 1/4″ to 3/8″ ID tubing.

4218K61 ..... $25.43

About Liquid-Level Switches

Liquid-level switches are actuated when the liquid content reaches the float. As the float rises and falls, a magnet attracts and releases the contacts, opening and closing the switch. For more information about electrical switches, see page 855.

Wired "Off to On" (Normally Open)

Wired "On to Off" (Normally Closed)

The first illustration shows a switch set so it is normally open—it turns one circuit from "off" to "on." When the tank fills, the switch trips, completing the circuit and turning on the internal pump to begin removing water.

The second illustration shows a switch set so it is normally closed—it turns one circuit from "on" to "off." When the tank fills, the switch trips, breaking the circuit and turning off an external pump to stop filling the tank.

Specific Gravity

Specific gravity is the ratio of the density of a given substance to the density of water. A liquid less dense than water will have a specific gravity less than one, while a liquid denser than water will have a specific gravity greater than one.

For example, hydraulic oil is less dense than water and has a specific gravity between 0.88 and 0.94.

Do You Need a Relay?

Most of our liquid-level switches have an amp rating too low to actuate a pump or valve directly. In these cases, you'll need to install a relay to provide the power these components require. See 47475K on page 545, or for our entire selection of relays, see pages 902-914.

Dual-Level Switch Kits for Liquids

These kits include all you need to set up a custom dual-level switch quickly and easily—switches, fittings, and cut-to-length tubing with the lead wires already threaded. They have two single pole, single throw (SPST) switches that actuate at two separate levels to indicate when your tank is empty and when it's full. Both switches can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). All are rated for use at 120/240 VAC. Switches mount vertically to the top of your tank and have 60″ wire leads. Tank connections are 2″ NPT male. Brass and stainless steel tubing is 7/16″ ID × 1/2″ OD. Polypropylene tubing is 3/8″ ID × 1/2″ OD. For additional brass tubing, see page 155; for stainless steel tubing, see pages 144-150; and for polypropylene tubing, see page 132.

For information about liquid-level switches, see page 544.

Relays for Low-Amp Liquid-Level Switches

Are the amps on your liquid-level switch too low to actuate a pump or valve? Then connect your switch to one of these general purpose relays—they offer the power you need to get the job moving. The relays work with any of our single pole, single throw (SPST) liquid-level switches (sold separately on this page and page 546). They have a terminal block connection and a 10-second time delay to minimize false signals in turbulent liquid. Relays are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They accept 120/240 VAC signal input. Rated for 8 amps @ 240 VAC. Temperature range is –4° to +122° F.

Compact model has knockouts in the base and sides for easy cable entry. Housing is made of white ABS plastic and is 3⅜″ Ht.×3⅜″ Wd.×1 9/16″ Dp. Model ***with sealed cable connections*** offers protection against dust and low-pressure jets. Housing is made of gray polycarbonate and is 3 3/16″ Ht.×6 5/16″ Wd.×2⅜″ Dp. Relay has an IP65/IEC 144 rating.

Relay with Sealed Cable Connections

Compact	47475K62	$87.16
With Sealed Cable Connections	47475K82	166.29

Vertical-Mount Liquid-Level Switches

Connect to the top or bottom of your tank (unless noted). All can be set to turn one circuit from "off" to "on" (normally open—NO) or from "on" to "off" (normally closed—NC), unless noted. Each float travels between about one-quarter to one-half of the float height, except *Style H* switches, which have a travel length of 4⅞″. All switches operate on 120/240 VAC, unless noted. All have 24″ wire leads, except bracket-mount switches, which have 72″ leads, and hazardous location switches, which have 6″ leads. Minimum temp. is 33° F, unless noted. Connections are NPT male, except ⅜″-16 and 7/16″-20 sizes, which have straight threads.

Low-amp switches require a relay in order to actuate a motor or pump (see 47475K on this page or pages 902-914). They are single pole, single throw (SPST). High-amp switches are single pole, double throw (SPDT).

Low-amp switches with slosh guard prevent unnecessary switching caused by turbulence in your tank.

Bracket-mount low-amp switches with slosh guard mount to the inside of your tank with two 9/32″ mounting holes (fasteners not included).

Hazardous location switches have a NEMA 4 housing (for indoor/outdoor use and exposure to splashing liquids and dusty environments) and a ¾″ NPT female conduit connection. All meet Class I, Groups C and D; Class II, Groups E, F, and G.

♥ UR = UL recognized; CSA = CSA certified; NSF = NSF certified; UL = UL listed. ■ Not rated for 240 VAC.
♣ Minimum temperature is –40° F. ♦ Top mount only. ★ PBT = Polybutylene Terephthalate. ● Body is made of brass.

For information about liquid-level switches, see page 544.

Horizontal-Mount Liquid-Level Switches

Mount these switches horizontally at any level along the inside wall of your tank or vessel. All can be set to turn one circuit from "off" to "on" (normally open—NO) or from "on" to "off" (normally closed—NC), except *Style G* switches, which come set either normally open or normally closed and cannot be changed. All are rated for 120/240 VAC and have 18″-24″ wire leads, unless noted. Minimum temperature is 40° F, unless noted.

All connections are NPT male, except for *Style N* switches, which have NPT female inside threads; *Style P* switches, which have NPT female outside threads; and ⅜″-24, ½″-13, ⅝″-11, ¾″-16, and ⅞″-14 sizes, which have straight threads.

Low-amp switches are single pole, single throw (SPST), unless noted, while high-amp switches are single pole, double throw (SPDT).

Low-amp switches require a relay in order to actuate a motor or pump (see 47475K on page 545). Those *with slosh guard* prevent unnecessary switching caused by turbulence in your tank.

For Hazardous Locations—*46815K* switches meet Class I, Groups A, B, C, and D; Class II, Groups E, F, and G; Class III. *5300K* switches meet Class I, Division 1, Groups A, B, C, and D; Class II, Division 1, Groups E, F, and G; Class III, Type 4. *4909K* switches meet Class I, Groups B, C, and D (stainless steel body also meets Group A); Class II, Groups E, F, and G. *4914K* switches meet Class I, Groups C and D; Class II, Groups E, F, and G.

♥ UR = UL recognized; CSA = CSA certified; NSF = NSF certified; UL = UL listed. ★ Has ¼″ male spade connectors (no wire leads included).
■ Not rated for 240 VAC. ● Single pole, double throw (SPDT). ♣ Minimum temperature is –40° F. ♦ Has 6″ wire leads.

For information about liquid-level switches, see page 544.

Liquid-Level Float Switches

Installation couldn't be easier—simply hang these free-floating mechanical switches in your tank, and as your water level rises, the float turns and trips the switch. All are single pole, single throw (SPST).

Fixed-level float switches actuate and deactuate at a single level—ideal for triggering an alarm. They require 3″ clearance from the tank wall plus at least 10″ of vertical movement to actuate.

Switches for Water—Common with sump pumps. Float is ABS thermoplastic. Include a cable with a three-prong, "piggyback" plug, which is great for troubleshooting because it is not wired to the pump. UL listed.

Switches for Highly Viscous Liquids and Slurries—A polypropylene float gives these switches increased buoyancy, even in viscous media. Include wire leads. CSA certified.

Adjustable-level float switches allow you to adjust the actuation and deactuation points to prevent excessive wear on your equipment. They require at least 13″ of vertical movement to actuate and include wire leads.

Low-Amp Switches for Water—Commonly connected to relays to control small motors (see 47475K on page 545). Float is ABS thermoplastic. 49045K2 and 49045K4 let you set the on/off points between 8″ and 39″; set the on/off points for 49045K6 and 49045K8 between 12″ and 157″.

Switches for Highly Viscous Liquids and Slurries—A polypropylene float provides increased buoyancy in viscous media. Set the on/off points between 10″ and 50″ (unless noted). CSA certified.

Fixed-Level Switch for Water with "Piggyback" Plug

♣ Also operates at 240 VAC. ★ Maximum actuation point is 40″.

Wear-Resistant Level Switches for Conductive Liquids

With no moving parts, these switches are less prone to wear, so they're less prone to premature failure. They have two Type 316 stainless steel tips to monitor the level of conductive liquids. They stand up to dirty liquids and those with high solid content. Their compact design fits almost anywhere and their NEMA 6 housing withstands occasional submersion. Mount horizontally or vertically.

Switches have a single pole, double throw (SPDT) relay that can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They also have a 6-ft. cable with wire leads. Rated for 1 amp at 30 VDC. Minimum liquid specific gravity is 1.0. Connections are ¾″ NPT male. ***Caution:*** Do not use in flammable solutions.

Polypropylene switches have a maximum pressure of 85 psi at 70°F and a temp. range of –10° to +140°F. ***Ryton*** switches have a maximum pressure of 290 psi at 70°F. Temp. range is –10° to +176°F.

Insertion Length	*Polypropylene*		*Ryton*	
1½″	3915K13	$191.25	3915K11	$201.32
3″	3915K14	214.64	3915K12	227.63

Easy-View Liquid-Level Switches

With these switches, you can visually monitor the liquid level, as well as maintain the switch, all from outside your tank. You can even remote mount them away from your tank. They have a Type 316 stainless steel float encased in a clear acrylic reservoir with ½″ NPT female connections that mount vertically to the outside of your tank. They have aluminum alloy end plates, Buna-N gaskets, and 24″ long wire leads. They are SPST (single pole, single throw) and operate on 0.4/0.2 amps at 120/240 VAC. Normally open switches turn one circuit from "off" to "on," while normally closed switches turn one circuit from "on" to "off." Minimum liquid specific gravity is 0.6. Maximum pressure is 125 psi at 70°F. Temperature range is 33° to 170°F. Overall size is 3 5/16″ Dia. × 6⅜″ Ht.

Wired "Off" to "On" (Normally Open)	4288K51	$131.29
Wired "On" to "Off" (Normally Closed)	4288K52	131.29

Probe-Style Level Switches for Conductive Liquids

Instead of a float, these switches feature probes that reach deep into your tank to detect the level of any conductive liquid—circuit is closed when the liquid reaches the probes. To customize your level detection, probes can be cut to any length (minimum ⅛″). With no moving parts, these switches are less prone to premature failure or catching on tank walls. Tank connection is 2″ NPT male. Switches have screw terminals and a single pole, double throw (SPDT) relay that can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switches are rated for 10 amps at 120 VAC for controlling small pumps and motors. Designed for indoor use. All include a polypropylene control box and Type 316 stainless steel probes that are encased in PTFE. The control box has two 11/64″ dia. mounting holes (fasteners not included). Maximum pressure is 250 psi at 70°F. Temperature range is –40° to +150°F. UL listed and CSA certified. ***Caution:*** Do not use in flammable solutions.

Single-level switches include two probes to detect a single level change.

Dual-level switches have three probes for detecting two independent levels.

Probe Length	*Single Level*		*Dual Level*	
6″	46715K21	$343.64	46715K91	$405.45
12″	46715K22	343.64	46715K92	404.55
18″	46715K23	381.82	46715K93	461.82
24″	46715K24	381.82	46715K94	461.82
36″	46715K25	$420.00	46715K95	$520.00
48″	46715K26	460.00	46715K96	578.18
60″	46715K27	498.18	46715K97	636.36

Dual-Level Switch

For information about liquid-level switches, see page 544.

Vibration-Resistant Liquid-Level Switches

BSPP Male Connection

Control the liquid level in your tank without a float. These optical switches use an infrared light beam in place of a float and won't be affected by any vibrations in your tank that could cause a float to malfunction or wear prematurely. Switches are sensitive to light, so they need to be shielded or used in an enclosed tank. All are single pole, single throw (SPST). Maximum output is at the input voltage. Mount horizontally or vertically, unless noted. Minimum specific gravity is not rated. Switches with a BSPP male connection have an external LED for a visual indication of when the output is on. *Polyamide* housing is best for use with solvents, *polysulfone* offers higher chemical resistance than polyamide, and *steel* housing is the choice for high-pressure applications.

Actuates When Wet (Normally Open)—When the tip becomes immersed in liquid, the beam refracts and actuates the sensor output.

Actuates When Dry (Normally Closed)—When the tip becomes exposed to air, the beam stops refracting and actuates the sensor output.

Housing Material	Pipe Size	Max. psi @ 70°F	Temp. Range, °F	Input Voltage	Max. Output	Insertion Lg.	O'all Lg.	Hex Size	Wire Lead Lg.	Actuates When Wet (Normally Open)		Actuates When Dry (Normally Closed)

● Mount horizontally only.

Level Switches for Dry Materials

Side Mount

It's easy to tell when bins of dry material are full or empty. These switches have a paddle that rotates at 1 rpm; if rotation is impeded, a sensor will actuate a relay.

Switches are housed in a polyester-coated aluminum enclosure that's rated for NEMA 4X (washdown/corrosion resistant) and NEMA 5 (dust/lint resistant). They have a Type 304 stainless steel paddle and an 8" dia. steel mounting plate with six 11/32" mounting holes (fasteners not included). Paddle measures 1 1/2" Wd. × 5" Lg., unless noted. Switches have a single pole, double throw (SPDT) relay that can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They have 3/4" NPT female conduit connections for wiring. Maximum pressure is 30 psi at 70°F. Temperature range is –30° to +160°F. UL listed and CSA certified. Use ***side-mount*** switches with materials weighing less than 30 lbs./cu. ft. ***Top-mount*** switches are for use with materials weighing 30-75 lbs./cu. ft.

Standard switches are rated for 20 amps at 120 VAC. ***Safety*** switches are rated for 10 amps at 120 VAC. They also have a second SPDT relay rated for 0.6 amps at 120 VAC that can be used as an alarm relay or to indicate failure. Two LEDs indicate proper operation and alarm condition, and an external function test lets you verify proper operation while the unit is installed and operating.

★ Paddle measures 2" Wd. × 7" Lg.

Noncontact Liquid-Level Switches

Set multiple switch points for controlling liquid level and activating alarms. These noncontact ultrasonic switches mount on top of your tank and use sound waves to detect liquid level so they never come into contact with the liquid itself. Use with harsh chemicals and dirty and highly viscous liquids. Switches have a polycarbonate NEMA 4X enclosure (washdown/corrosion resistant) with a PVDF-covered ultrasonic transducer. They have three single pole, double throw (SPDT) relays rated for 0.5 amps at 120 VAC. Relays can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switches operate on 95 to 250 VAC and include screw terminals with two 1/2" NPT female conduit connections. Max. pressure is 30 psi at 70°F. Temp. range is –7° to +140°F. Connection is NPT male.

Operating Range	Pipe Size	O'all Size, Lg. × Wd.		
0.33 to 9.8 ft.	1"	3 15/16" × 5 3/16"	3785K11	$937.50
0.67 to 26.2 ft.	2"	5 1/2" × 5 3/16"	3785K12	1,023.15

Liquid-Level Switches with Compressed-Air Output

Side Mount

Top Mount

Instead of an electrical signal, these switches actuate a three-way compressed air valve for use in harsh environments without electricity. Switches have a Type 304 stainless steel float that is magnetically coupled to the air valve; air supply remains closed until the float rises and opens the valve. Requires a 30-100 psi air supply. Stem is Type 301 stainless steel. Float measures 1" Dia. × 2" Lg. Minimum liquid specific gravity is 0.5. Maximum pressure is 200 psi at 70°F. Temperature range is 35° to 140°F. Tank connection is 1" NPT male; the valve and air connections accept 3/32" ID tubing.

Mounting Position	Insertion Lg.	O'all Lg.		
Brass Body				
Side Mount	3"	6 7/8"	3792K31	$286.36
Top Mount	3 1/2"	7 11/16"	3792K32	369.09
Type 303 Stainless Steel Body				
Side Mount	3"	6 7/8"	3792K41	330.91
Top Mount	3 1/2"	7 11/16"	3792K42	432.73

External-Mount Dry- and Liquid-Level Switch for Plastic Tanks

Shown with Mounting Bracket (included)

Don't worry about chemical compatibility—install this level switch on the outside of your tank. It never comes in direct contact with the material inside, so it can be used with harsh chemicals and highly viscous liquids. It reads dry and liquid levels through any thermoplastic tank less than 1" thick by monitoring the capacitance between the switch and the material in the tank. When the material drops below or rises above the switch's position, the capacitance changes and actuates the switch. Mount horizontally or vertically.

Switch has a single pole, single throw (SPST) relay that can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Rated for 0.35 amps maximum at the supply voltage. Operates at 20 to 240 VAC, 50-60 Hz. Switch has a set screw and an indicating light to make calibration quick and easy. It includes 6 1/2-ft. long wire leads and a mounting bracket with one 3/16" hole and one 3/16" × 13/16" slotted hole (fasteners not included). Switch (without bracket) measures 1 3/16" Dia. × 3" Lg. Mounting bracket measures 2" Lg. × 1 5/16" Wd. × 1 3/16" Ht. Temperature range is –13° to +176°F. UL listed and CSA certified.

Note: Cannot be mounted to a metallic surface.

4696K21 ..... $255.08

Continuous-Level Transmitter for Liquids and Dry Materials

Continuously monitor the level in your tank without contaminating its contents. This ultrasonic transmitter uses sound waves to monitor the fluid level and sends the results via a 4-20 mA signal output. It mounts at the top of your tank and will never come in contact with the fluid, so you don't have to worry about chemical compatibility or viscosities. Housing is polycarbonate and rated NEMA 4X (washdown/corrosion resistant). Transmitter operates on 12/24 VDC and has a conduit box with 6-ft. wire leads. Max. pressure is 15 psi at 70°F. Temp. range is –40° to +140°F. Connection is NPT male.

Operating Range	Pipe Size	Overall Size, Dia. × Lg.		
4" to 70"	3/4"	3" × 4 1/4"	5354K23	$357.14

Compact Low-Flow Switches

In low-flow applications, these switches are ideal for detecting the presence or absence of flow and actuating alarms that protect pumps. All have 24″ wire leads; 4960K2 also has a ½″ NPT female conduit connection. Use with water. Switches mount horizontally or vertically, unless noted. All are UL recognized, unless noted.

Styles A-D are single pole, single throw normally open (SPST-NO). They turn one circuit from "off" to "on." *Styles E* and *F* are single pole, double throw (SPDT). They turn one circuit from "off" to "on" or from "on" to "off."

Straight switches have NPT male process connections, unless noted. ***90° elbow*** switches have NPT female process connections, unless noted.

Switches are available in your choice of setpoints, except for Style C, which is available at 0.5 gpm only. **To Order:** Please specify setpoint from those listed below.

♠ Operates on 120 VAC only. ▲ Not UL recognized. ■ Mount vertically only.

Adjustable Flow Switches

Adjustable to any flow rate within their range, these switches handle higher flow rates than the compact switches above. They have a bronze body and are single pole, double throw (SPDT)—they can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They're rated 0.17/0.08 amps @ 120/240 VAC. All have 24″ wire leads and a ½″ NPT male conduit connection. Seals are fluoroelastomer. Use with water. Mount at any angle. Maximum pressure is 400 psi at 70° F. Process connections are NPT female. UL recognized, CSA certified, and CE approved.

Straight *90° Elbow*

Straight switches have a temperature range of –20° to +200° F.
90° elbow switches have a temperature range of –20° to +180° F.

To Order: Please specify setpoint range from those listed below.

Hazardous-Location Adjustable Low-Flow Switches

UL listed Class I, Groups B, C, and D; and Class II, E, F, and G for use in hazardous locations. These switches monitor low-flow applications with compressed gas (air, natural gas, nitrogen, carbon dioxide, and methane) and water and have an adjustable setpoint. They're single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed).

Switches operate on 5 amps at 120/240 VAC and have 18″ wire leads with a ¾″ NPT male conduit connection. Mount at any angle. Maximum pressure is 1,450 psi at 70° F. Temperature range is –4° to +220° F. Process connections are NPT female.

♥ Also UL listed Class I, Group A.

Paddle-Style Flow Switches

For small to large pipes, these switches include paddles that can be removed or trimmed to fit your specific application. Install directly into a threaded fitting in horizontal pipe runs. The paddle extends into the flow and actuates the switch when flow reaches the setpoint.

NEMA 1 switches are for indoor use.

NEMA 4X switches are for outdoor, washdown, and corrosive environments.

G&H *4939K3*

G&H Switches are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They operate on 7.4/3.7 amps at 120/240 VAC. Connect with screw terminals. Use with water and hydraulic oil. Temperature range is 32° to 300° F, unless noted. UL listed and CSA certified.

Style G switches fit 1″ to 6″ pipe sizes. They have a 1″ NPT male process connection and four paddles (1″, 2″, 3″, and 6″ long). Setpoint ranges from 6 to 166 gpm (unless noted) depending on the pipe size, fluid, and paddle used.

Style H fit 1¼″ to 16″ pipe sizes. They have a 1¼″ NPT male process connection and include two paddles (1″ and 6″ long). Setpoint is adjustable and ranges from 5 to 998 gpm depending on the pipe size and paddle used. 4939K3 and 4939K4 have a ½″ NPT conduit connection.

J *2766K36*

J Switches fit 1½″ to 3″ pipe sizes. They include a ¾″ socket weld connection (unless noted) and one 5″ paddle. Setpoint ranges from 8 to 24 gpm depending on the pipe and paddle size. Switches are single pole, single throw normally open (SPST-NO). They turn one circuit from "off" to "on." They operate on 1 amp at 120/240 VAC or 12/24 VDC; they have a 5-ft. cable without a plug. Use with water. Temperature range is 34° to 230° F.

Hazardous-Location Paddle-Style High-Flow Switches

These customizable switches include five Type 316 stainless steel paddles that can be removed or trimmed to fit any pipe size between 1½" and 20". They're UL listed for Class I, Groups C and D; and Class II, Groups E, F, and G hazardous locations. Switches are also CE approved and CSA certified. They work with flow ranges from 7 to 2,400 gpm for water and 32 to 10,000 scfm for compressed gases (air, natural gas, nitrogen, carbon dioxide, and methane). Flow rates and set points vary based on pipe size and paddle used. Switches have a 1½" NPT male process connection and install directly into a threaded fitting in horizontal pipe runs.

The paddle extends into the flow and actuates the switch when flow reaches the setpoint. They operate on 10 amps at 120/240 VAC and include 6" wire leads with a ¾" NPT female conduit connection. Paddles measure 1¼", 2", 3", 4", and 6". Temperature range is –4° to +275° F.

Switches for one circuit are single pole, double throw (SPDT). They turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed).

Switches for two circuits are double pole, double throw (DPDT). They turn two circuits from "off" to "on" (normally open) or from "on" to "off" (normally closed).

Washdown Adjustable Flow Switches

A NEMA 4X enclosure keeps these switches sealed for use outdoors and in washdown and corrosive environments. They're adjustable to any flow rate within their range and are ideal for use with water and hydraulic oil. They control valves, pumps, or alarms and are single pole, double throw (SPDT). They can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Switches operate on 0.4 amps at 120 VAC and include screw terminals with a ½" through hole for conduit connection. Mount at any angle. Body is bronze. Maximum pressure is 400 psi at 70° F. Temperature range is –30° to +212° F. Process connections are NPT female. CSA certified.

To Order: Please specify setpoint range from those listed below.

Dial-Indicating High-Flow Switches

In addition to switching at a single, fixed setpoint, these flow switches have a pointer that shows you the relative flow rate on a numberless dial scale. They have a NEMA 4 housing (indoor/outdoor use) and are good for use with water and lubricating oil. Switches are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They operate on 15/7 amps at 120/240 VAC and include screw terminals with a ½" NPT female conduit connection. Mount at any angle. Housing is bronze. Maximum pressure is 125 psi at 70° F. Temp. range is –10° to +200° F. Process connections are NPT female.

Pipe Size	Setpoint, gpm	Indicating Range, gpm	Port-to-Port Lg.		
½"	2.5	2-28	3⅝"	**4228K11**	$705.10

2"	11	10-75	6½"	**4228K15**	1,582.48

High-Visibility Rotary-Indicating Flow Transmitters

Monitor flow up close or remotely—these transmitters have a clear polycarbonate window and white acetal rotor for visual flow indication. They also produce a 4-20 mA output signal for transmitting to a data recorder, logger, or display (not included; see page 950). Use with water. Body is Type 316 stainless steel. All operate on 0.35 amps at 12-35 VDC and have a 10-ft. cable without plug. Mount at any angle. Maximum pressure is 200 psi at 70° F. Temperature range is 20° to 225° F. Process connections are NPTF (Dryseal) female.

Rotary-Indicating Flow Transmitters and Adjustable Switches

Transmitter

Switch

For easy viewing, these transmitters and switches have a polysulfone window and a black Ryton rotor. Use with water. Process connections are NPT female. UL recognized and CE approved. Mount horizontally or vertically.

Choose a ***transmitter*** to produce a pulsed output signal for connecting to a data recorder, logger, or display (not included; see page 950). They operate on 0.07 amps at 24 VDC and have 24" wire leads.

Switches actuate when flow reaches the setpoint, which you can adjust to anywhere within the range listed. They're single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They operate on 0.3 amps at 120 VAC and have 24" wire leads.

About Flowmeters

Flowmeters measure the rate of flow for a liquid or a gas.

Unless noted, all of our flowmeters have a ***direct-reading scale***, which is calibrated and labeled to read in specific units, typically gpm (gallons per minute) for water and scfm (standard cubic feet per minute) for air.

Install a filter upstream of the flowmeter to clean out debris and ensure accurate flow readings, except where noted. For all of our flowmeters, we provide an accuracy specification; this is stated as a percentage of the full scale, unless indicated otherwise.

Vertical-mount flowmeters, also called rotameters, have a float that's housed in a vertical tube. They must be installed vertically and flow can move in one direction only—from the bottom of the meter to the top—as shown in the illustration.

Versa-mount flowmeters (beginning on page 555) have a spring-loaded piston that moves in proportion to the flow rate. These can be installed in any position—vertically, horizontally, and anywhere in between. They are also more shock and vibration resistant than standard flowmeters and are better suited for high-pressure applications.

Vertical-Mount Flowmeters

Versa-Mount Flowmeters

Vertical-Mount Flowmeters

For information about pipe size, see pages 2-3.

Panel-Mount Flowmeters

These flowmeters have inlet and outlet connections located on the back, so they extend through your control panel for quick installation. Must mount vertically; flow moves from bottom to top.

They have an easy-to-read flat surface and an acrylic tube that stands up to direct sunlight for outdoor use. All have a Type 316L stainless steel float and rod, and ethylene propylene (EPR) O-rings. Fittings are PVC, except flowmeters with 1/4″ NPT female connections, which have brass end fittings, and those with a Type 316 stainless steel control valve, which have Type 316 stainless steel fittings.

For Water— Maximum pressure is 125 psi @ 70° F. Temperature range is 33° to 130° F.

For Air— Maximum pressure is 100 psi @ 70° F. Temperature range is 33° to 100° F.

Flowmeters ***with control valve*** let you make inline flow adjustments. Choose Type 316 stainless steel for corrosion resistance.

Flowmeters ***with a NIST certificate*** include a certificate traceable to the National Institute of Standards and Technology (NIST). Certificates have a calibration date and a put-to-service date. Flowmeters must be calibrated again after a set period of time from the put-to-service date, not the calibration date; they do not begin to fall out of calibration until they are actually put in service.

For information about flowmeters, see page 551. For information about pipe size, see pages 2-3.

Extended-Life Panel-Mount Flowmeters

Stainless steel components and fluoroelastomer O-rings provide long life with good accuracy. These flowmeters have inlet and outlet connections located on the back, so they extend through your control panel for quick installation. Must be mounted vertically; flow moves from bottom to top.

Flowmeters have an outdoor-safe acrylic tube, Type 316 stainless steel fittings, Type 303 stainless steel float and rod, fluoroelastomer O-rings, and a Type 303 stainless steel control valve for inline flow adjustments, unless noted. Max. pressure is 100 psi at 70° F. Max. temperature is 150° F. Min. water temperature is 32° F. Not rated for min. air temperature. Connections are NPT female.

Panel-Mount High-Temperature Water Flowmeters

Without Control Valve

These flowmeters have a polysulfone tube that's good for use with high temperatures and a dual scale that's graduated in both gallons per minute and liters per minute. Must mount vertically; flow moves from bottom to top.

They have 90° polysulfone fittings that allow you to mount them in a control panel. They have a Type 316 stainless steel float and rod (unless noted), and fluoroelastomer O-rings. Accuracy is ±5%. Scale height is 2". Overall height is 7", unless noted. Maximum pressure is 150 psi at 70° F. Maximum temperature is 212° F. Not rated for minimum temperature.

Flowmeters ***with control valve*** let you make inline flow adjustments. Valve is polysulfone, polypropylene, and CPVC.

■ Center-to-center height is 6 13/16"; overall height is 8".

Dual-Scale Water Flowmeters

Forget conversion formulas—these flowmeters have a dual scale that's graduated in both gallons per minute and liters per minute. Must mount vertically; flow moves from bottom to top.

The acrylic tube stands up to direct sunlight, so they can be used outdoors. Flowmeters have polypropylene fittings, a Type 316 stainless steel float and rod (unless noted), and fluoroelastomer O-rings. Accuracy is ±5%. Scale height is 4", unless noted. Use with water. Max. pressure is 150 psi at 70° F. Max. temperature is 150° F; min. temperature is not rated. Connections are NPT female.

★ Max. pressure is 150 psi at 70° F. ♠ Connections are NPT male.

Oxygen Flowmeters

Cleaned, packaged, and calibrated for oxygen service, these flowmeters are graduated in liters per minute and are ideal for welding applications. Must mount vertically; flow moves from bottom to top. A built-in Type 316 stainless steel control valve lets you make inline flow adjustments. Meters have an impact-resistant polycarbonate tube, a brass fitting, a glass float (unless noted), and Buna-N O-rings. Scale height is 3 1/4". Overall height is 6 7/8". Maximum pressure is 100 psi at 70° F. Maximum temperature is 150° F; minimum temperature is not rated. The side inlet connection is 1/8" NPT female; bottom outlet connection is barbed for 1/4" ID tubing.

Flow Range, lpm	Accuracy		
1/8-3 1/2	±0.2 lpm	3505K44	$69.68
1/4-8	±0.4 lpm	3505K45	69.68
1/2-15	±0.6 lpm	3505K46♥	69.68

♥ Float is Type 316 stainless steel.

For information about flowmeters, see page 551. For information about pipe size, see pages 2-3.

Easy-to-Install Dual-Scale Flowmeters

Conveniently graduated in both gallons per minute and liters per minute, these dual-scale flowmeters also have union fittings so they're easy to install. Must mount vertically; flow moves from bottom to top. Use with water.

All have a polysulfone tube and fittings, a Type 316 stainless steel rod and float (unless noted), and fluoroelastomer O-rings. Accuracy is ±5%, unless noted. Maximum pressure is 150 psi at 70° F. Maximum temperature is 200° F; minimum temperature is not rated.

♦ Float is PTFE. ▲ Accuracy is ±3%. ● Accuracy is ±2%.

Panel-Mount Impact-Resistant Flowmeters

With a polycarbonate tube and case, these panel-mount flowmeters are more impact resistant than those with just an acrylic tube. Must mount vertically; flow moves from bottom to top. They have Type 303 stainless steel fittings and fluoroelastomer O-rings. Accuracy is ±4%. Scale height is 2 3/16"; overall height is 4 13/16". Maximum pressure is 100 psi at 70° F. Maximum temperature is 150° F; minimum temperature is not rated. Connections are 1/8" NPT female. Choose with or without a Type 303 stainless steel control valve for inline flow adjustment.

Water-Flow Wheel Calculator

Calculate the potential flow in a new system, or learn the capacity of your current system. Made of acrylic, this wheel has precision three-color engraving and calculates an extremely wide range of parameters. Wheel diameter is 7 5/8".

One side calculates the rational formula for water flow in pipes; it is graduated from 1.5 to 1,000,000 gpm with pressure drop from 0.01 to 1,000 ft. The other side calculates the Manning formula for flow in open channels; it is graduated 50 to 5,000,000 gpm with a channel area of 0.7 to 2,000 sq. ft. and slope from 1 ft. per 100,000 ft. to 1 ft. per 10 ft.

9632K22 ..... $159.94

Easy-to-Install Flowmeters

Union fittings make these flowmeters easy to install. Must mount vertically; flow moves from bottom to top. All have fluoroelastomer O-rings and NPT female connections.

Ultrapure flowmeters are made entirely of plastic so they're ideal for high-purity applications, such as deionized water. They have a polysulfone tube, PVC fittings, a PTFE float (unless noted), and a polysulfone rod. Accuracy is ±6%. Maximum pressure is 150 psi at 70° F. Temperature range is 33° to 130° F.

High-flow meters are for larger pipes and flow rates. They have an acrylic tube and Type 303 stainless steel fittings, float, and rod. Accuracy is ±5%. Maximum pressure is 100 psi at 70° F. Maximum temperature is 150° F; minimum temperature is not rated.

▲ Float is PVDF.

Flowmeters with Protective Case

Get built-in protection from impact, splashing liquids, and leaks and spills. These flowmeters have a Type 304 stainless steel case with a polycarbonate window. Must mount vertically; flow moves from bottom to top. Measure water (gallons per minute) and air (standard cubic feet per minute) on two interchangeable scales. Fittings are Type 316 stainless steel. Temperature range is 33° to 200° F. Connections are NPT female.

Polysulfone flowmeters have a polysulfone tube, Type 316 stainless steel float and rod, and fluoroelastomer O-rings. Accuracy is ±3%.

Glass flowmeters have a borosilicate glass tube, Type 316 stainless steel float, and fluoroelastomer O-rings. 5083K36 and K37 also have a Type 316 stainless steel rod. Accuracy is ±5% for all, unless noted.

● Accuracy is ±2%.

For information about flowmeters, see page 551. For information about pipe size, see pages 2-3.

Slimline Glass Flowmeters

A slender design makes these flowmeters ideal for low-flow laboratory applications. In addition, their dual scale lets you use them with water or air. Must mount vertically; flow moves from bottom to top.

All have a borosilicate glass tube protected by a polycarbonate shield, PTFE fittings, a glass float, and fluoroelastomer O-rings. Scale height is 4½″; overall height is 8″, unless noted. Accuracy is ±5% of the flow or 2 mm, whichever is greater. Temp. range is –15° to +150° F. Connections are ¼″ NPT male, unless noted.

Flow Range For Water	Flow Range For Air	Max. psi @ 70° F		
Milliliters per Minute				
0.002-1.1	0.2-90	125	**41695K31**	$222.20

0.03-1.9	3-77	50	**41695K36**●	325.60

● O'all ht. is 9¾″. Connections are ½″ NPT male.

Digital Water Flowmeters/Totalizers for Large PVC Pipe

Monitor flow in water treatment and sub-metering applications—these flowmeters/totalizers connect to 3″ or 4″ Schedule 80 PVC pipe. The six-digit display shows flow rate (in either gallons per minute or liters per minute), total flow volume (up to 999,999 gallons or liters), and batch flow volume. Total flow volume is nonresettable. Batch flow volume can be reset to measure flow during a single use. Digit height is ⅜″. Mount horizontally or vertically.

Body is PVC. Maximum pressure is 225 psi at 70° F. Temp. range is 32° to 140° F. Batteries included.

Flowmeters/totalizers with unthreaded connections have male socket-weld connections (also known as a spigot). Connect with PVC cement and primer.

Flowmeters/totalizers with flanged connections bolt to ANSI Class 150 flanges of the same pipe size. 3777K12 has a 7½″ OD with a 6″ dia. bolt circle and requires 4 ⅝″ bolts. 3777K14 has a 9″ OD with a 7½″ dia. bolt circle and requires 8 ⅝″ bolts.

Flow Range, gpm /lpm	Pipe Size	O'all Lg.	*With Unthreaded Connections*		*With Flange Connections*	
40-400/151-1,514	3″	12″	**3777K11**	$619.14	**3777K12**	$782.28
60-600/227-2,271	4″	14″	**3777K13**	659.43	**3777K14**	832.40

Changeable-Scale Panel-Mount Glass Flowmeters

You'll get two scales with these flowmeters: a permanently mounted correlated scale and a snap-on, direct-reading dual scale graduated for water (gallons per hour) and for air (standard cubic feet per hour). Correlated scales can be adapted for various liquids and gases at different pressures. Must mount vertically; flow moves from bottom to top.

Accuracy for the correlated scale is ±2% of the reading or ±1 of the scale divisions, whichever is greater. For the direct-reading scale, accuracy is ±5% of the reading or ±2 of the scale divisions, whichever is greater.

Flowmeters also come with two floats (one glass and one Type 316 stainless steel), which can be interchanged depending on your application. They have a borosilicate glass tube protected by a Type 303 stainless steel case with a polycarbonate window. They also include a PTFE control valve for inline flow adjustments. Fittings are Type 303 stainless steel and O-rings are fluoroelastomer. Scale height is 5⅞″. Overall height is 10″. Maximum pressure is 200 psi at 70° F. Temperature range is 15° to 250° F. Connections are ⅛″ NPT female.

Flow Range For Water, gph	Flow Range For Air, scfh

0.2-9.6	1.0-55	**40425K37**	368.28

Low-Flow Compact Glass Flowmeters with Protective Case

Choose these compact flowmeters for low flows in tight spots—they have ¼″ NPT female connections and a shorter overall height than other flowmeters on this page. Must mount vertically; flow moves from bottom to top.

They also are protected by a Type 316 stainless steel case with a clear polycarbonate window. All have a borosilicate glass tube, Type 316L stainless steel fittings and float (unless noted), and fluoroelastomer O-rings. Accuracy is ±6%. Maximum pressure is 200 psi at 70° F. Temperature range is 33° to 200° F.

♦ Float is made of glass.

Panel-Mount Glass Flowmeters with Conversion Chart

Get precision and adaptability from these flowmeters that feature a correlated scale instead of a direct-reading scale. Correlated scales can be adapted for various liquids and gases at different pressures. Must mount vertically; flow moves from bottom to top. Flowmeters include a conversion chart for water, compressed air, nitrogen, oxygen, argon, and helium in cubic centimeters per minute.

All have a borosilicate glass tube that's protected by a metal housing with a clear polycarbonate magnifying window for easy viewing. They also have a glass float and a Type 316 stainless steel control valve so you can make inline flow adjustments. Fitting material is the same as the housing material. Maximum pressure is 200 psi at 70° F. Maximum temperature is 200° F; minimum temperature is not rated. Connections are ⅛″ NPT female.

Flowmeters with an ***aluminum case*** have Buna-N O-rings; those with a ***Type 316 stainless steel case*** have fluoroelastomer O-rings.

Compact flowmeters are for use in locations where space is an issue. Accuracy is ±5%. Scale height is 2⁹⁄₁₆″, center-to-center height is 4½″, and overall height is 5½″.

Standard flowmeters have an accuracy of ±3%. Scale height is 5⅞″, center-to-center height is 8¹³⁄₁₆″, and overall height is 9¹³⁄₁₆″.

For information about flowmeters, see page 551. For information about pipe size, see pages 2-3.

Vertical-Mount Shatterproof High-Pressure Water Flowmeters

A Type 304 stainless steel body and Type 316 stainless steel fittings give these flowmeters great impact resistance to prevent shattering and spilling. For use with water. Scale is graduated in gallons per minute. Window is acrylic. Mount vertically; flow moves from bottom to top. O-rings are fluoroelastomer. Accuracy is ±3%. Maximum pressure is 1,500 psi at 70° F. Temperature range is 33° to 350° F. Connections are NPT female.

Versa-Mount Transparent-Body Flowmeters

Quickly spot problems from a distance—these flowmeters have a transparent body so you can monitor flow in addition to reading the scale. All have a shock-resistant spring-loaded piston so they can be mounted horizontally, vertically, or at any angle. The dual scale shows flow rate in both gallons per minute and liters per minute. Body is polysulfone, except for 4161A61-A66 and 4161A41-A46, which have a polycarbonate body. O-rings are Buna-N. Accuracy is ±5%. Maximum pressure is 325 psi at 70° F.

Easy-to-install flowmeters have union fittings.

Flowmeters ***for water*** have a minimum temperature of 33° F.

Flowmeters ***for hydraulic oil*** are not rated for minimum temperature.

Versa-Mount Shock-Resistant Air Flowmeters

With Pressure Gauge

These air flowmeters have a shock-resistant spring-loaded piston so they can operate in any position—horizontal, vertical, or at an angle. The scale rotates 360° for easy viewing and is protected by a polycarbonate shield. Scale shows flow rate in standard cubic feet per minute. All flowmeters have an anodized aluminum body and fluoroelastomer O-rings. Accuracy is ±2%, except ¼″ pipe size flowmeters, which are not rated. Temperature range is –20° to +240° F. Connections are NPTF (Dryseal) female.

Scale shows flow rate relative to pressure. If pressure is unknown or fluctuates, use flowmeters ***with pressure gauge***, which have a glycerin-filled pressure gauge that measures pressure from 0 to 160 psi.

Versa-Mount High-Pressure Water Flowmeters

Choose these heavy duty flowmeters for use in high-pressure applications—they're built to withstand water pressures up to 3,500 psi at 70° F. All have a shock-resistant spring-loaded piston so they can operate in any position—horizontal, vertical, or at an angle. Flowmeters have a dual scale that shows flow rate in both gallons per minute and liters per minute. Scale rotates 360° for easy viewing and is protected by a polycarbonate shield. Flowmeters have a brass body, Type 303 stainless steel fittings, and fluoroelastomer O-rings. Accuracy is ±2%, except ¼″ pipe size flowmeters, which are not rated. Temperature range is –20° to +240° F. Connections are NPTF (Dryseal) female.

Versa-Mount High-Pressure Hydraulic Oil Flowmeters

Flowmeter without Test Kit

Handle hydraulic oil pressures up to 3,500 psi at 70° F with these heavy duty flowmeters. All have a shock-resistant spring-loaded piston so they can operate in any position—horizontal, vertical, or at any angle. Flowmeters have a dual scale that's graduated in both gallons per minute and liters per minute. Scale rotates 360° for easy viewing and is protected by a polycarbonate shield. Flowmeters have an anodized aluminum body, Type 303 stainless steel fittings, and fluoroelastomer O-rings. Accuracy is ±2%, except 1/4″ pipe size flowmeters, which are not rated. Temperature range is –20° to +240° F. Connections are NPTF (Dryseal) female.

Flowmeters ***with test kit*** detect worn components and verify flow and pressure control settings. Kit includes a flowmeter, pressure gauge, and valve. The pressure gauge is glycerin filled.

Versa-Mount Dial-Indicating Flowmeters

Mount these flowmeters horizontally, vertically, or at any angle—all have a shock-resistant spring-loaded piston so they can be installed in any position. Overall length is 3 5/8″, unless noted. Maximum pressure is 3,000 psi @ 70° F. Maximum temperature is 150° F. Minimum temperature is not rated. Connections are NPT female.

For Water— Accuracy is ±2%. *Aluminum* and *brass body* flowmeters have Buna-N O-rings. *Type 316 stainless steel body* flowmeters have fluoroelastomer O-rings.

For Air— Accuracy is ±5%. O-rings are Buna-N.

Versa-Mount High-Temperature Hydraulic Oil Flowmeters

Looking for a flowmeter that can take the heat? These flowmeters can continuously handle high-temperature hydraulic oil up to 400° F. All have a shock-resistant spring-loaded piston so they can be mounted horizontally, vertically, or at any angle. Flowmeters include a dual scale that shows flow rate in both gallons per minute and liters per minute. The scale rotates 360° for easy viewing and is protected by a borosilicate glass shield. Flowmeters have an anodized aluminum body, Type 303 stainless steel fittings (unless noted), and fluoroelastomer O-rings. Accuracy is ±2%, unless noted. Maximum pressure is 3,500 psi at 70° F. Temperature range is –20° to +400° F, unless noted. Connections are NPTF (Dryseal) female.

Flow Range, gpm/lpm	Pipe Size	Scale Lg.	O'all Lg.

★ Has anodized aluminum fittings. Accuracy is ±4%. Minimum temperature is not rated.

Dial-Indicating Flowmeters

Check flow more quickly with an easy-to-read dial. These flowmeters are available in four styles (shown above), so you can choose the orientation that fits your needs. All have a bronze body and Buna-N O-rings. Dial size is 3 1/2″. Accuracy is ±3%. Maximum pressure is 180 psi at 70° F. Temperature range is –30° to +212° F. Connections are NPT female. *Note:* For accurate readings, install flowmeters at a minimum distance of 10 times the pipe diameter downstream from any fittings.

To Order: Please specify mounting orientation and direction of flow: horizontal left-to-right, horizontal right-to-left, vertical up, or vertical down.

For Water— Gallons per Minute

Flow Range, gpm	Pipe Size	O'all Size, Lg. × Ht.

For information about flowmeters, see page 551. For information about pipe size, see pages 2-3.

Clog-Resistant Dial-Indicating Flowmeters

Ideal for use with water containing solid particles (up to 1/4″ dia.) that clog conventional meters, these flowmeters have a 17-7 PH stainless steel vane inside the flowmeter that moves in proportion to flow rate. There are no floats that could stick and no tubes to clean. Scale is graduated in gallons per minute. Flowmeters have a brass body (unless noted) and EPDM O-rings. Accuracy is ±2%. Maximum pressure is 200 psi at 70° F. Temp. range is –10° to +400° F. Connections are NPT female, unless noted.

To Order: Specify mounting orientation and direction of flow: horizontal left to right, horizontal right to left, vertical up, or vertical down.

Flow Range, gpm	Pipe Size	O'all Lg.		
0.5-5	1/2″	5 11/16″	4165K111	$359.27

30-300	3″	12″	4165K181■	616.94

■ Body is brass and steel. Connections are NPT male.

Super-Low-Flow Compact Flowmeters

At just 2″ Dia.×2 1/2″ Ht., these flowmeters fit into tight spaces and measure flow rates as low as 1 milliliter per minute. They have an internal disc that senses flow and are designed for use with any particle-free low-viscosity liquid up to 25 centipoise (similar to antifreeze), except deionized water. For horizontal pipe; mount with wire leads on top. Body is Type 316 stainless steel and O-rings are PTFE. Flowmeters operate on 8-30 VDC and produce a 0-5 VDC pulse output signal. All include 3 feet of cable with wire leads. Accuracy is ±0.5%. Max. pressure is 500 psi at 70° F. Temp. range is –40° to +180° F. CSA certified. Connections are 1/4″ NPT female.

Optional display meter accepts the output signal of the flow sensor, registering flow rates and totals. It has screw terminals and a six-digit display that can be manually reset. Digit height is 5/16″. Overall size is 1 7/8″ Lg.×15/16″ Ht.×2 11/16″ Dp.

Flow Range, ml/min.		
1-250	4126K47	$1,153.85
5-1,250	4126K48	909.23
Optional Display Meter	4126K38	174.57

Digital Air Flowmeters

It's easy to accurately pinpoint flow rates with these digital flowmeters. The flow rate is measured by a thermal sensor and registered on a dual-line LCD display. Digit height is 3/16″. Flowmeters have an RS-232 port and produce a 0-5 VDC output signal that can be transmitted to a remote display. Mount horizontally. Fittings are Type 316 stainless steel; body is ABS plastic and Type 316 stainless steel. All operate on 90-240 VAC and include a 5-ft. power cord with a two-prong plug. Overall length is 4 13/16″. Accuracy is ±3%. Max. pressure is 150 psi at 70° F. Temperature range is 32° to 122° F. Connections are 1/8″ compression tube fittings.

Flow Range			
1-50	cubic centimeters/minute	9365K61	$1,169.23
4-200	cubic centimeters/minute	9365K62	1,169.23
10-500	cubic centimeters/minute	9365K63	1,169.23
0.02-1	liter/minute	9365K64	1,169.23
0.1-5	liters/minute	9365K65	1,169.23

Water Flowmeters for PVC Pipe

There's no need to disassemble your pipeline to install these flowmeters. Just drill a 5/80 dia. hole into horizontal Schedule 40 PVC pipe and mount the flowmeter using the included clamps. Flowmeters have a dual scale that measures in both gallons per minute and liters per minute. They have an acrylic body, a Type 316 stainless steel float, and a neoprene O-ring. Accuracy is ±10%. Maximum pressure is 150 psi at 70° F. Maximum temperature is 190° F. Minimum temperature is not rated.

Flow Range, gpm/lpm	Pipe Size	Scale Ht.	O'all Ht.		
5-35 / 20-160	1″	3 1/8″	6″	4349K1	$84.05
15-75 / 60-280	1 1/4″	3 1/8″	6″	4349K2	84.05
20-100 / 75-375	1 1/2″	3 1/8″	6″	4349K3	84.05
40-150 / 150-550	2″	3 1/8″	6″	4349K4	90.36
80-300 / 300-1,125	3″	3 1/8″	6″	4349K6	116.20
125-500 / 550-2,000	4″	3 1/2″	6″	4349K7	126.74

Easy-Check Portable Digital Flowmeters

Use these handheld ultrasonic meters to easily spot-check flow. Also known as Doppler flowmeters, they measure flow from the outside of the pipe, so they never come in contact with the liquid. Use with liquids containing suspended solids with a minimum dia. of 0.004″ (100 microns); particle-free liquids will not produce a reading.

Flowmeters measure fluid velocities from 0.3 to 30 feet per second; a flow calculator is included to convert velocity to flow rate. They have an 11/16″ high, four-digit LCD and an ABS plastic NEMA 12K housing (for indoor use; will stand up to seeping oil and dusty environments). Overall size is 4″ Lg.×7 11/16″ Ht.×1 11/16″ Dp. All come furnished with a carrying case. Accuracy is ±2%. Temperature range is –28° to +140° F. Batteries included.

For Pipe Size		
1/4″-120″	42195K9	$1,752.38
1″-120″	42195K8	1,242.86

Easy-Mount Clamp-On Digital Flowmeters

Monitor flow rates from outside the pipe with these ultrasonic flowmeters. All have a two-piece clamp that fits over the pipe and secures in place with the included screw and wing nut. Meters measure flow for debris-free liquids and display flow rate on an eight-digit LCD in both gallons per minute and liters per minute. Digit height is 11/16″. Body is ABS plastic and rated NEMA 3 (for indoor/outdoor use). Flowmeters operate on 11-30 VDC and have screw terminals for hardwiring to a power source. They include an optional AC/DC adapter for operation on 120 VAC. Adapter has a 6-ft. power cord with a two-prong plug. Flowmeters also include a 6-ft. RS-232 cable for connection to a PC (software must be downloaded; PC with internet connection required). Overall size is 6″ Lg.×3″ Ht.×2 1/2″ Dp. Accuracy is ±1%. Temperature range is 0° to 185° F.

Flow Range, gpm/lpm	For Pipe Size		
2-100 / 8-375	1″	2218K5	$1,372.22
8-400 / 30-1,500	2″	2218K6	1,578.57

About Totalizers and Flowmeters/Totalizers

Totalizers measure the cumulative total flow volume. ***Flowmeters/totalizers*** display both the flow rate and the cumulative total flow volume. For accurate readings, install totalizers or flowmeter/totalizers at a minimum distance of 10 times the pipe diameter from any fittings. In liquid applications, the pipe must be full of liquid for accurate readings; install a filter upstream from the totalizer or flowmeter/totalizer to remove debris.

Digital Totalizers

Track the total number of gallons or liters that flow through your pipes. All totalizers have a four-digit LCD that displays the total flow volume, up to 9,999 gallons or liters. Total flow volume can be reset to zero. Digit height is 3/8″. Mount horizontally or vertically. Overall length is 4″. Accuracy is ±5%. Temp. range is 14° to 130° F. Connections are NPT female. Batteries included.

Totalizers ***for water*** have a nylon body and Type 316 stainless steel seals. Maximum pressure is 150 psi at 70° F.

Totalizers ***for fuel*** have an aluminum body and Type 316 stainless steel seals. For use with kerosene, gasoline, and diesel fuel. Maximum pressure is 300 psi at 70° F.

Flow Range	Pipe Size	*For Water*		*For Fuel*	
3-30 gallons per minute	1″	9978K75	$166.88	9978K77	$166.88
10-100 liters per minute	1″	9978K76	166.88	9978K78	166.88

For information about flowmeters/totalizers, see page 557. For information about pipe size, see pages 2-3.

Digital Water Flowmeters/Totalizers for PVC Pipe

With Threaded Connections

Perfect for your PVC piping system, these flowmeters/totalizers are available with two types of connections: threaded or unthreaded. The six-digit display shows flow rate (in either gallons per minute or liters per minute) and total flow volume (up to 999,999 gallons or liters). Total flow volume is nonresettable. Digit height is 3/8″. Mount horizontally or vertically. They have a PVC body and a Type 316 stainless steel seal. Accuracy is ±3%. Maximum pressure is 225 psi at 70° F. Temperature range is 32° to 140° F. Batteries included.

Flowmeters/totalizers ***with threaded connections*** have NPT female threads and fit Schedule 80 threaded pipe.

Flowmeters/totalizers ***with unthreaded connections*** have male socket-weld connections (also known as a spigot) and fit Schedule 80 unthreaded pipe. They connect to pipe with PVC cement and primer (see page 86).

Flow Range, gpm/lpm	Pipe Size	*With Threaded Connections* O'all Lg.			*With Unthreaded Connections* O'all Lg.

High-Accuracy Digital Flowmeters/Totalizers

Precise flow readings are simple with these digital flowmeters/totalizers. The easy-to-read six-digit LCD shows the flow rate in gallons per minute and also registers the total flow volume up to 999,999 total gallons. Total flow volume is nonresettable. Digit height is 3/8″. All are calibrated for liquids with a specific gravity of 1, but they can also be calibrated for other liquids with viscosities from 1 to 100 centipoise (similar to cough syrup). They operate on two 3-volt lithium batteries (included). Mount vertically or horizontally. Flowmeters/totalizers have Type 316 stainless steel seals, except those with PVDF bodies, which have fluoroelastomer seals. Temperature range is 14° to 140° F. Connections are NPT female. Flowmeters/totalizers with nylon, aluminum, brass, and Type 316 stainless steel bodies are also rated NEMA 4 (for indoor/outdoor use) and FM approved intrinsically safe for Class 1, Div. 1 hazardous locations.

Pulse Output Module—For flowmeters/totalizers with a PVDF, brass, or Type 316 stainless steel body. Can transmit pulse signals up to 5,000 feet away to a data recorder, logger, or remote display (not included). Includes 10 feet of cable with wire leads.

4352K224 ..... $85.59

Wireless Transmitter and Receiver—For flowmeters/totalizers with PVDF, brass, and Type 316 stainless steel bodies. Includes a transmitter that sends pulse signals up to 300 feet away and an 8-channel receiver that sends a signal to a data recorder, logger, or remote display (not included). Transmitter operates on the included batteries. Receiver includes 25 feet of cable with wire leads.

4352K81 ..... $704.77

4-20 mA Output Module—For flowmeters/totalizers with PVDF, brass, and Type 316 stainless steel bodies. Connect module to a data recorder, logger, or remote display (not included). Includes a main module, circuit assembly, and 10 feet of cable with wire leads.

4352K226 ..... $316.21

Remote Mounting Kit—For flowmeters/totalizers with PVDF, brass, and Type 316 stainless steel bodies. Kit allows you to panel mount the meter's display up to 100 feet away. Furnished with a sensor module and 10 feet of cable with wire leads.

4352K22 ..... $208.79

Repl. 3-Volt Lithium Battery—For all flowmeters/totalizers above.

7821K71 ..... $11.50

Digital Flowmeters/Totalizers with Sanitary Quick-Clamp Connections

Great for food and pharmaceutical applications, these flowmeters/totalizers have a Type 316 stainless steel body and quick-clamp connections that meet 3-A sanitary standard requirements (for quick-clamp fittings, see pages 208-210). Flowmeters/totalizers have an eight-digit LCD that displays the flow rate (in either gallons per minute or liters per minute) and also registers the total flow volume (up to 999,999.99 gallons or liters). Total flow volume can be reset to zero. Digit height is 3/4″. Use with water and corrosive chemicals. Flowmeters/totalizers are calibrated for water, but can be calibrated for other liquids with viscosities from 1 to 30 centipoise (similar to vinegar). Mount horizontally or vertically. Batteries included. Temperature range is –22° to +158° F. CSA certified.

Flow Range, gpm/lpm	Accuracy	Max. psi @ 70° F	For Tube OD	Flange OD	O'all Lg.

2.0-15.0 / 7.5-57	±1%	1,000	1 1/2″	2″	5 3/4″	3893K58	1,057.63

For information about flowmeters/totalizers, see page 557. For information about pipe size, see pages 2-3.

Digital Flowmeters/Totalizers for High-Viscosity Liquids

The rotating gears inside these flowmeters/totalizers are ideal for measuring viscous fluids up to 1,000 centipoise, including fuel oil, hydraulic oil, and oil-based paint. Flowmeters/totalizers have a six-digit LCD that shows flow rate (either in gallons per hour or gallons per minute) and also registers total flow volume (up to 999,999 gallons). Total flow volume can be reset to zero. Digit height is 3/8″. Mount horizontally or vertically. O-ring is fluoroelastomer. Process connections are NPT female.

Flowmeters/totalizers ***with pulse output*** can be connected to a data recorder or logger (cable with wire leads not included). Operates on included batteries.

Flowmeters/totalizers ***with 4-20 mA output*** send a signal to a data recorder, logger, or a remote display (not included). They operate on 8.5-35 VDC and have a liquid-tight cord-grip connection with screw terminals.

High-Pressure Flowmeters/Totalizers for Lubricants

Also known as lube meters, these flowmeters/totalizers measure the flow rate and total flow volume of engine oil and transmission fluid up to 1,000 centipoise and handle pressures up to 1,500 psi at 70° F. Mount horizontally or vertically. Body is aluminum and O-ring is Buna-N. Temperature range is 23° to 131° F. Connections are NPT female.

Flowmeter/totalizer ***with LCD*** has a six-digit display that indicates flow rate in gallons per minute or liters per minute and also shows total flow volume up to 999,999 gallons or liters. Total flow volume can be reset to zero. Digit height is 1/2″. Batteries included.

Flowmeter/totalizer ***with pulse output*** sends a pulse signal to a data recorder, logger, or display (not included). Includes 3 feet of cable with wire leads.

With LCD

Flow Range, gpm/lpm	Accuracy	Pipe Size	O'all Lg.	With LCD		With Pulse Output	
0.26-7.8 / 1-30	±0.5%	1/2″	3 1/2″	4060K64	$294.50	4060K68	$232.22

Splash-Resistant Digital Water Flowmeters and Totalizers

A NEMA 4X-rated display on these flowmeters and totalizers withstands washdowns and outdoor environments. For use with water. All have a six-digit LCD. O-ring is fluoroelastomer. Mount horizontally or vertically.

Flowmeters measure the flow rate (in gallons per minute). ***Totalizers*** register the total flow volume (up to 999,999 gallons). Total flow volume can be reset to zero; you can disable the reset function to prevent tampering. ***Flowmeters/totalizers*** measure both the flow rate (in gallons per minute) and register total flow volume (up to 999,999 gallons). Total flow volume can be reset to zero; you can disable the reset function to prevent tampering.

For Pipe—LCD digit height is 5/16″. Body is polypropylene. Temperature range is 32° to 200° F. Batteries included.

For Tubing—LCD digit height is 3/16″. Body is PVDF. Flowmeters/totalizers operate on 115 VAC and include a 9-ft. power cord with a two-prong plug. Temperature range is 32° to 130° F.

Remote-Monitoring Digital Water Flowmeters/Totalizers for PVC Pipe

Check water flow rate and volume from a remote location. For a complete unit, you'll need to order an LCD, a sensor, and a tee fitting. For use in schedule 80 unthreaded PVC pipe. Max. pressure is 180 psi at 70° F. Temp. range is 0° to 194° F.

LCD

LCD

LCD has a two-line display that shows flow rate with four 1/2″ high digits and total flow volume with eight 1/4″ high digits (up to 99,999,999 gallons or liters; nonresettable). It displays flow rate in gallons or liters per second, minute, hour, or day. Rated NEMA 4X (for use outdoors and in washdown and corrosive environments). Designed for panel mounting, size is 1/4 DIN (96 mm × 96 mm × 50 mm). Accuracy is ±0.5%. Batteries included. *Optional surface mounting bracket for LCD* has four 3/16″ × 3/4″ mounting slots (fasteners not included).

LCD	4114K335	$541.21
Optional Surface Mounting Bracket for LCD	4114K94	34.07

Sensor

Sensor has a polypropylene body and a fluoroelastomer O-ring. It includes 25 feet of cable with wire leads for connection to the LCD so you can monitor flow remotely. Accuracy is ±1%.

4114K222 ..... $305.95

Sensor

Tee Fittings

Tee fittings ensure the sensor is correctly positioned. Made of PVC. Mount directly in horizontal or vertical pipe. Fittings have socket-weld connections and connect to pipe with PVC cement and primer (see page 86).

Flow Range, gpm/lpm	Pipe Size		
1-19 / 4-72	1/2″	4114K231	$123.00

Tee Fitting

For information about flowmeters and totalizers, see page 557. For information about pipe size, see pages 2-3.

Extended-Life Water Flowmeters and Flowmeters/Totalizers

Flowmeter *Flowmeter/ Totalizer*

No moving parts means there's less wear and maintenance so these flowmeters/totalizers last longer. They work by creating vortices (whirls of water) that are proportional to the velocity of your flowing media. Mount horizontally or vertically. Body is made of Ryton and is rated NEMA 4X (for use outdoors and in washdown and corrosive environments). Maximum pressure is 150 psi at 70° F. Temperature range is –4° to +176° F. Connections are NPT male.

Flowmeters transmit a pulse output signal to a data recorder, logger, or display (not included). They operate on 12-24 VDC and include 3 feet of cable with wire leads. O-ring is fluoroelastomer.

Flowmeters/totalizers have an eight-digit LCD that indicates flow rate (in gallons per minute) as well as total flow volume (up to 99,999,999 gallons). Display is nonresettable. Digit height is 3/8″. Battery included.

Flow Range, gpm	Accuracy	Pipe Size	O'all Lg.	Flowmeters		Flowmeters/ Totalizers	
0.105-1.1	±3%	3/8″	5 1/8″	3437K61	$532.14	3437K51	$921.05

NSF-Certified Cold-Water Totalizers

Totalizer

Totalizer with Remote LCD

Perfect for cold-water service, these totalizers have a brass body and a low-flow indicator that detects leaks in the system. These products are NSF 61 certified for use with drinking (potable) water in all states as of January 1, 2010. All have a nonresettable dial that indicates the total flow volume. Mount horizontally. Fittings are bronze and O-ring is neoprene. Accuracy is ±1.5%. Maximum pressure is 150 psi at 70° F. Temperature range is 33° to 80° F. Meet AWWA (American Water Works Association) C700 standards. All include couplings.

Style A— Coupling connections are NPT male. *Totalizers* register up to 10,000,000 gallons. *Totalizers with remote LCD* register up to 9,999,990 gallons; they generate a pulse to the remote display every gallon.

Style B— Coupling connections are NPT female. *Totalizers* register up to 100,000,000 gallons. *Totalizers with remote LCD* register up to 99,999,000 gallons; they generate a pulse to the remote display every 10 gallons.

Style C— Coupling connections are NPT male. *Totalizers* register up to 1,000,000 cubic feet. *Totalizers with remote LCD* register up to 999,990 cubic feet; they generate a pulse to the remote display every cubic foot.

Totalizers with remote LCD allow you to place the display up to 500 feet away from the totalizer—ideal when the totalizer is located in an inaccessible or inconvenient area. Display is nonresettable. Digit height is 1/4″. Battery included. *Cable for remote LCD* (sold separately below) is required for connecting the display to the totalizer.

Cold-Water Totalizers with Switch

Coupling with NPT Male Connection

The switch on these piston-style totalizers closes each time the set amount of water passes through the totalizer. Switches are single pole, single throw normally open (SPST-NO). They turn one circuit from "off" to "on" and can be used to activate a pump, valve, or alarm. They operate on 20/10 amps at 120/250 VAC and include screw terminal connections.

Totalizers have a nonresettable dial that registers the total flow volume up to 9,999,999 gallons. Mount horizontally. Body is bronze. O-ring is Buna-N. Temperature range is 35° to 105° F. All include couplings; connections are NPT male, unless noted.

To Order: Please specify the amount of water that will close the switch each time that amount passes through. For 4187K41-K45, please specify: 5, 10, 20, 25, 50, 100, 200, 250, or 500 gallons. For 4187K47 and K48, please specify: 50, 100, 200, 250, 500, or 1,000 gallons.

■ Couplings have NPT female connections.

Corrosion-Resistant Cold-Water Totalizers

Deionized water won't damage these totalizers—all are made of nylon for added corrosion resistance. Totalizers have a nonresettable dial that registers the total flow volume up to 9,999,999 gallons. Mount horizontally. O-ring is Buna-N. Temperature range is 35° to 115° F. All include couplings; connections are NPT male.

Flow Range, gpm	Accuracy	Max. psi @ 115° F	Inlet ID	Coupling Pipe Size	O'all Lg.		Each

For information about totalizers, see page 557. For information about pipe size, see pages 2-3.

High-Flow Flanged Cold-Water Totalizers

Dealing with high flow rates and large pipe sizes? Use these cold-water totalizers to keep tabs on the total number of gallons flowing through your pipes. These products can be used with drinking (potable) water in all states except California, Maryland, and Vermont as of January 1, 2012. Totalizers have a nonresettable dial that registers the flow volume up to 99,999,990 gallons, unless noted. Dial size is 2½″. Mount horizontally. Body is bronze and O-ring is rubber. Temperature range is 33° to 120° F. Meet AWWA (American Water Works Association) Standard C-701 Class II. Connections are flanged.

Round flanges are drilled to accommodate AWWA Class D and ANSI 150-lb. flanges.

Use the *optional flange kit* to convert elliptical flanges to NPT female connections.

Optional Flange Kit for Elliptical Flanges ..... **4189K22** $136.69

♦ Dial registers up to 999,999,000 gallons.

Hot-Water Totalizers

Best suited for moderate flow, these totalizers are painted red to designate hot-water service. All have a brass body and a nonresettable dial that registers the total flow volume up to 9,999,990 gallons. Dial size is 2½″. Mount horizontally. O-ring is rubber. Temperature range is 33° to 155° F. All include couplings; connections are NPT male. Meet AWWA (American Water Works Association) Standard C-708.

Flow Range, gpm	Accuracy	Max. psi @ 155° F	Inlet ID	Coupling Pipe Size	O'all Lg.

Corrosion-Resistant Hot-Water Totalizers

Use with water up to 200° F—these totalizers withstand high temperatures with their heavy-duty construction and nickel-plated brass body. Totalizers have a nonresettable odometer-style display that registers the total flow volume up to 9,999,999.9 gallons. O-ring is fluoroelastomer. Mount horizontally or vertically. Accuracy is ±1.5%. Maximum pressure is 150 psi at 200° F. Temperature range is –200° to +200° F. Couplings are included; connections are NPT male.

Flow Range, gpm	Inlet ID	Coupling Pipe Size	O'all Lg.		
0.13-13	¾″	½″	9 1/16″	**4115K41**	$216.22
0.22-20	1″	¾″	10⅛″	**4115K42**	229.73

High-Accuracy Fuel Totalizers

Accurately measure deliveries of gasoline, diesel, and kerosene with these totalizers—they have a small internal disc that senses flow volume with an accuracy of ±2%. Ideal for low-flow, low-pressure applications. The flow volume registers on a two-line display: batch total on one line, with four ⅝″ high digits (up to 999.9 gallons; resettable), and accumulated total flow volume on the other line, with eight 3/16″ high digits (up to 999,999.9 gallons; nonresettable). Mount horizontally or vertically. Display rotates 360° for easy viewing. Both have a weather-resistant die cast aluminum body, Buna-N O-rings, and a 10×10 mesh strainer. Overall size is 7″ Ht.× 7⅝″ Wd.×6⅛″ Dp. Maximum pressure is 50 psi at 70° F. Temperature range is –20° to +125° F. Connections are 1″ NPT female.

Flow Range		
5-30 gallons per minute	**9854K11**	$212.07
19-114 liters per minute	**9854K12**	212.07

High-Accuracy Digital Oil Totalizers

A small internal disc inside these totalizers senses the flow of hydraulic and motor oil with an accuracy of ±0.5%. Totalizers can be programmed to measure flow volume in ounces, gallons, or liters. All have a seven-digit LCD that registers the total flow volume up to 999,999.9 units. Digit height is ¾″. Totalizers activate automatically or manually and automatically shut down 40 seconds after flow stops. Mount horizontally, vertically, or at any angle. O-ring is fluoroelastomer. Batteries included. Connections are NPT male.

Totalizer with nylon body is 5¼″ Ht.×5¼″ Wd.×4″ Dp.

Totalizer with Type 316 stainless steel body is 5 7/16″ Ht.× 5 7/16″ Wd.×4½″ Dp.

Flow Range	Max. psi @ 70° F	Pipe Size	Temp. Range		
Nylon Body					
2-30 gpm	60	1″	33° to 150° F	**41935K49**	$255.69
Type 316 Stainless Steel Body

0-425	1¼″	10	**4360K22**	477.98

Graduated Tubes

Also known as calibration columns, these clear PVC tubes are great for calibrating flow rates on metering pumps. All tubes have a scale that's graduated in gallons per hour. Fittings are PVC. Maximum pressure is not rated. Temperature range is 32° to 140° F. Connections are NPT female.

Flow Range, gph	Tube Volume, ml	Pipe Size	O'all Ht.

About Pressure and Vacuum Gauges

Pressure gauges measure pressure above atmospheric pressure (positive pressure).

Vacuum gauges measure pressure below atmospheric pressure (negative pressure).

Compound gauges measure both pressure and vacuum.

Differential gauges measure the difference between two pressures.

Most gauges sense pressure changes with the use of an internal Bourdon pressure tube—a curved or coiled tube behind the dial that uncoils when pressure increases and coils more tightly when pressure decreases. Gauges for very low pressures have a diaphragm instead of a Bourdon pressure tube.

General service pressure gauges can be used with noncorrosive gases and liquids, such as air and water. The connection and Bourdon pressure tube or diaphragm are made of a copper alloy, such as brass or bronze.

Corrosive service pressure gauges can be used with more corrosive media that could attack brass or bronze components. The connection and Bourdon pressure tube or diaphragm are usually Type 316 stainless steel. If you're dealing with highly corrosive media, we recommend using a gauge guard (diaphragm seal) between the medium and your gauge (see page 578).

Use a *coiled pipe (siphon)* to protect gauges in steam and other high-temperature applications (see page 578). The pipes prevent high-temperature fluids from reaching the internal parts of the gauge where they can cause damage.

Temperature Range

Ambient temperature refers to the temperature of the environment to which the exterior of the gauge is exposed.

Process temperature refers to the temperature of the process media to which the internal components of the gauge are exposed (i.e., the Bourdon pressure tube or diaphragm).

Gauge Accuracy

Gauge accuracy and grade are categorized by ASME (ANSI) standard B40.1. Gauges that are "Not Graded" do not meet one of the ASME (ANSI) B40.1 guidelines. For example, a gauge with ±1.5% full-scale accuracy falls between Grades A and 1A, so it is listed as "Not Graded." We offer gauges in the following ASME (ANSI) grades:

Accuracy	Grade
±5% Full Scale	D
±2% Mid Scale; ±3% Rest of Scale	B
±1% Mid Scale; ±2% Rest of Scale	A
±1% Full Scale	1A
±0.5% Full Scale	2A
±0.25% Full Scale	3A

NIST Certificates

Many gauges are available with a certificate of calibration traceable to the National Institute of Standards and Technology (NIST). This certificate shows you that your gauge has been tested against a gauge certified by NIST and proven to fall within a required tolerance.

Certificates have a calibration date and a put-to-service date. Gauges must be calibrated again after a set period of time from the put-to-service date, not the calibration date; they do not begin to fall out of calibration until they are actually put in service.

Range Selection

Choose a gauge with a full-scale pressure range that is approximately double your normal operating pressure. Your maximum operating pressure should not exceed 75% of the full-scale range.

Dial Face

Numeral increments refer to the pressure increments between numbers on the dial face. For example, the dial face shown has a numeral every 10 psi.

Graduation marks are the hash marks between the numerals. For example, the dial face shown has a graduation mark every 2 psi.

Case Materials

In a clean, dry, noncorrosive environment, a painted-steel-case gauge is sufficient. Brass is a good choice for damp areas, and stainless steel and thermoplastic cases are better in corrosive environments.

Dry or Glycerin-Filled

Most of the gauges we offer are dry, containing only the gauge mechanism inside the case. These work well for most applications. In some environments, however, vibrations and pulsation (pressure fluctuations) can cause the gauge needle to flutter, making the gauge difficult to read. Glycerin-filled gauges reduce this flutter. In addition, most glycerin-filled gauges have an air bubble inside that allows for expansion due to temperature changes.

Common Units of Pressure

psi—Pounds per square inch
kPa—Kilopascals
kg/cm²—Kilograms per square centimeter
bar—100 Kilopascals
oz./in.²—Ounces per square inch
in. of H_2O—Inches of water
in. of Hg—Inches of mercury
ft. of H_2O—Feet of water

General Service Pressure Gauges

Miniature Gauges—
±5% Full-Scale Accuracy (Grade D)

- Use with compressed air, water, ethyl alcohol, and nitrogen
- Bourdon Pressure Tube Material: Beryllium copper
- Connection: Brass NPT male or brass BSPT male
- Case Material: ABS thermoplastic
- Lens Material: Polycarbonate
- Temperature Ranges:
  Ambient: –40° to +150° F
  Process: –40° to +150° F

When you're in a tight spot choose these miniature gauges. Their pressure tube transmits motion directly to the pointer so there are no gears or bearings to wear out. Choose from gauges with NPT and BSPT (British Standard Pipe Taper) threads.

Available Pressure Ranges (psi)

Pressure Range	Numeral Increments	Grad. Marks	Pressure Range	Numeral Increments	Grad. Marks
0-60	10	5	0-200	40	10
0-100	20	5	0-300	50	25
0-160	40	10			

To Order: Please specify pressure range from the listing above.

Dial Size	Pipe Size	CENTER BACK CONNECTION NPT Male		BSPT Male	
29/32″	1/8″	38105K51	$9.92	38105K61	$11.02

High-Pressure Miniature Gauges—
±5% Full-Scale Accuracy (Grade D)

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Bronze
- Connection: Nickel-plated brass NPT male
- Case Material: Nickel-plated brass
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: –50° to +160° F
  Process: –50° to +160° F

For high-pressure applications, these gauges come in pressure ranges up to 6,000 psi. They have a 1″ hex size dial with no bushing so the gauge mounts flush in an NPT female opening. They have a gearless design for long life and porous brass in the connection that reduces pulsation.

Available Pressure Ranges (psi)

Pressure Range	Numeral Increments	Grad. Marks	Pressure Range	Numeral Increments	Grad. Marks
0-160	40	8	0-1,200	400	80
0-300	100	20	0-4,000	1,000	200
0-500	200	20	0-5,000	1,000	200
0-750	200	50	0-6,000	1,000	500

To Order: Please specify pressure range from the listing above.

Dial Size	Pipe Size	Center Back Connection	
1″	1/8″	9767T21	$10.78

For information about pressure gauges, see page 562.

Multipurpose Gauges—±2% Mid-Scale Accuracy (Grade B)

- Use with compressed air, hydraulic oil, nitrogen, and ethyl alcohol
- Bourdon Pressure Tube Material: Bronze
- Connection: Brass NPT male
- Case Material: See table
- Lens Material: Polycarbonate
- Temperature Ranges:
  Ambient: –40° to +150° F
  Process: –40° to +150° F

For general use with compressors, pumps, filters, and regulators. Choose from gauges with an ABS thermoplastic and a steel case.

ABS thermoplastic cases are more corrosion resistant than steel cases. Gauges *with NIST certificate* include a certificate of calibration traceable to NIST.

Single-scale gauges display psi pressure ranges. ***Dual-scale*** gauges give readings in both psi and kPa pressure ranges.

To Order: Please specify pressure range in psi from the listing below.

Available Pressure Ranges

■ Available only in pressure ranges up to 1,000 psi.

Square Panel-Mount Gauges—±2.5% Full-Scale Accuracy (Not Graded)

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass dual-thread ⅛" NPT male/ 10-32 SAE straight thread female
- Case Material: ABS thermoplastic
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: 0° to 140° F; Process: 0° to 140° F

Panel mount these gauges in a square cutout.

Available Pressure Ranges (psi)

Pressure Range	Numeral Increments	Grad. Marks
0- 15	1	0.5
0- 30	5	1
0- 60	10	2
0-100	10	1
0-160	20	5
0-200	20	2
0-300	50	10

To Order: Please specify pressure range from the listing above.

Dial Size	Pipe Size	Panel Cutout Square	Panel Mount Connection	
2"	⅛" NPT/10-32 SAE	1 49/64"	3814K11	$22.13

Compact Glycerin-Filled Gauges—±2.5% Full-Scale Accuracy (Not Graded)

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: ABS thermoplastic
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: 0° to 140° F
  Process: 0° to 140° F

Glycerin-filled gauges reduce needle flutter due to small vibrations and pulsation.

Available Pressure Ranges (psi)

Pressure Range	Numeral Increments	Grad. Marks	Pressure Range	Numeral Increments	Grad. Marks
0- 30	5	0.5	0- 300	50	5
0- 60	10	1	0-2,000	400	40
0-100	20	2	0-3,000	500	50

To Order: Please specify pressure range from the listing above.

Dial Size	Pipe Size	Center Back Connection	
1½"	⅛"	38055K21	$33.62

Top-Connect Water Gauge—±2% Mid-Scale Accuracy (Grade B)

- Use with water
- Bourdon Pressure Tube Material: Copper alloy
- Connection: Copper alloy GHT female
- Case Material: Black painted steel
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: 32° to 160° F
  Process: 32° to 160° F

Garden hose threads (GHT) connect directly to a standard water hose or valve. Gauge has a dual-scale dial that gives readings in both psi and kPa.

Dial Size	Pipe Size	Pressure Range, psi/kPa	Numeral Increments, psi/kPa	Grad. Marks, psi/kPa	Top Connection	
2½"	¾"	0-300/0-2,100	50/500	10/50	9823T11	$17.98

For information about pressure gauges, see page 562.

Silicone-Filled Shock-Resistant Gauges—±2% Mid-Scale Accuracy (Grade B)

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Copper alloy
- Connection: Nickel-plated brass NPT male
- Case Material: Type 304 stainless steel
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: –40° to +158°F; Process: –40° to +158°F

Center Back Conn.

Rugged, compact, and filled with silicone, these resist sudden shocks such as water hammer. Silicone also reduces needle flutter due to vibrations and pulsation. Their dual-scale dial gives pressure readings in both psi and kPa. ***Panel-mount*** gauges require a 1⅝″ cutout.

Available Pressure Ranges

Pressure Range psi	Pressure Range kPa	Num. Inc., psi	Grad. Marks, psi	Pressure Range psi	Pressure Range kPa	Num. Inc., psi	Grad. Marks, psi

Dial Size	Pipe Size	Center Back Connection	
1½″	⅛″	3793K21	$9.33
2″	¼″	3793K22	9.95

For information about pressure gauges, see page 562.

Compact Stainless Steel-Case Gauges

- Accuracy is ±2% at the mid point, ±5% below the mid point, and ±8% above the mid point
- Use with compressed air, water, hydraulic oil, nitrogen, and ethyl alcohol
- Bourdon Pressure Tube Material: Beryllium copper
- Connection: Brass NPT male
- Case Material: Type 304 stainless steel
- Lens Material: Polycarbonate
- Temperature Ranges:
  Ambient: –40° to +150°F; Process: –40° to +150°F

A compact Type 304 stainless steel case provides good corrosion resistance in harsh environments. The pressure tube transmits motion directly to the needle so there are no gears to wear out.

Available Pressure Ranges (psi)

Pressure Range	Numeral Increments	Grad. Marks	Pressure Range	Numeral Increments	Grad. Marks

Welding and Compressed Gas Gauges—±2% Mid-Scale Accuracy (Grade B)

- Use with compressed air, acetylene, carbon dioxide, and oxygen
- Bourdon Pressure Tube Material: Brass
- Connection: Brass NPT male
- Case Material: Brass
- Lens Material: Polycarbonate
- Temperature Ranges:
  Ambient: –40° to +140°F; Process: –40° to +140°F

Designed for welding and compressed gas applications, these gauges are UL 252A listed for ranges up to 1,000 psi and UL 404 listed for ranges 2,000 psi and higher. They're also cleaned to ASME B40.1, Level IV, making them safe for use with oxygen.

Available Pressure Ranges (psi)

2½″	¼″	32255K6	19.95

Gauges with Isolating Guard—±2% Mid-Scale Accuracy (Grade B)

- Use with water, hydraulic oil, sodium hypochlorite, and alkaline solutions
- Bourdon Pressure Tube Material: Copper alloy
- Connection: NPT Female gauge guard
- Case Material: Black painted steel
- Lens Material: Acrylic
- Ambient Temperature Range: –40° to +140°F
- Process Temperature Ranges:
  PVC Guard: 32° to 140°F
  CPVC Guard: 0° to 200°F
  Polypropylene Guard: 32° to 180°F

The attached guard with internal fluoroelastomer diaphragm keeps your process liquid from coming into contact with the gauge internals, protecting them from chemical corrosion. Gauges have a dual-scale dial that gives readings in both psi and kg/cm^2.

Available Pressure Ranges for Gauges

Pressure Range psi	Pressure Range kg/cm^2	Numeral Increments psi	Numeral Increments kg/cm^2	Grad. Marks psi	Grad. Marks kg/cm^2
0- 30	0- 2.1	5	0.5	0.5	0.05

Glycerin-Filled Gauges with NIST Certificate

Bottom Connection

- Accuracy: For 2½″ Dial: 1.5% full scale (not graded)
  For 4″ Dial: 1% full scale (Grade 1A)
- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: Brass
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: 0° to 160°F; Process: 0° to 160°F

These gauges include a certificate of calibration traceable to NIST. They are glycerin filled to reduce needle flutter due to vibrations and pulsation.

Available Pressure Ranges (psi)

Fire-Sprinkler-System Gauges—±2% Mid-Scale Accuracy (Grade B)

- Bourdon Pressure Tube Material: Bronze
- Connection: Brass NPT male
- Case Material: ABS thermoplastic
- Lens Material: Polycarbonate
- Temperature Ranges:
  Ambient: –40° to +150°F; Process: –40° to +150°F

All gauges are UL 393 listed and FM approved.
Water Gauge—Use in wet systems where water is immediately available to sprinkler heads.
Air/Water Gauge—Use in dry systems where lines are filled with air from 0-80 psi until system is activated with water at 80-250 psi. Pointer movement slows (retards) from 80 to 250 psi.

Air/Water

	Dial Size	Pipe Size	Pressure Range, psi	Numeral Increments, psi	Grad. Marks, psi	Bottom Connection	
Water	3½″	¼″	0-300	30	5	3806K11	$14.97
Air/Water	3½″	¼″	0-80/250	10	2	3806K12	16.15

For information about pressure gauges, see page 562.

Glycerin-Filled Stainless Steel-Case Gauges with BSPP Threads—
±1.5% Full-Scale Accuracy (Not Graded)

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass BSPP male
- Case Material: Type 304 stainless steel
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: 0° to 140°F; Process: 0° to 140°F

These metric-threaded BSPP (British Standard Pipe Parallel) gauges are ideal for installation into equipment. They have a dual-scale dial for readings in both bar and psi. Gauges are glycerin filled to reduce needle flutter due to vibrations and pulsation.

Available Pressure Ranges

Low-Pressure Diaphragm Gauges

Bottom Connection

- Accuracy:
  Bottom Connection: ±1.6% full scale (not graded)
  Center Back Connection: ±1.5% full scale (not graded)
- Use with compressed air, water, and hydraulic oil
- Diaphragm Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: Black painted steel
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: 0° to 140°F; Process: 0° to 140°F

Designed with a phosphor-bronze diaphragm to measure very low pressures. Gauges *with NIST certificate* include a certificate of calibration traceable to NIST.

Max-Indicating Glycerin-Filled Gauges—
±1.5% Full-Scale Accuracy (Not Graded)

Center Back Connection

- Use with compressed air, water, hydraulic oil, carbon dioxide, and ethanol
- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: Brass
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: 0° to 160°F; Process: 0° to 160°F

You can't monitor your gauges all day and night, so these have a red maximum-indicating pointer that shows you the highest pressure your system reached since your last checkup. These gauges are also glycerin filled to reduce needle flutter due to vibrations and pulsation. Gauges *with NIST certificate* include a certificate of calibration traceable to NIST.

Panel-mount gauges require a 2½" dia. cutout.

Available Pressure Ranges (psi)

Pressure Range	Numeral Increments	Grad. Marks	Pressure Range	Numeral Increments	Grad. Marks

Glycerin-Filled Gauges—
±1% Mid-Scale Accuracy (Grade A)

Center Back Connection

- Use with compressed air, water, hydraulic oil, and petrochemicals
- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: ABS thermoplastic
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: 0° to 140°F; Process: 0° to 140°F

Gauges are filled with glycerin to reduce needle flutter due to small vibrations and pulsation. They have a dual-scale dial that gives readings in both psi and kPa.

Panel-mount gauge requires a 2 7/16" dia. cutout.

Available Pressure Ranges

Glycerin-Filled Stainless Steel-Case Gauges

Center Back Connection

- Accuracy:
  1½″ and 2½″ Dials: ±1% mid scale (Grade A)
  4″ Dial: ±1% full scale (Grade 1A)
- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material:
  1½″ Dial: Phosphor bronze
  2½″ and 4″ Dials: Copper alloy
- Connection: Brass NPT male
- Case Material: Type 304 stainless steel
- Lens Material: 1½″ and 4″ Dials: Acrylic
  2½″ Dial: Polycarbonate
- Temperature Ranges:
  Ambient: –4° to +140°F; Process: –4° to +140°F

Gauges are glycerin filled to reduce needle flutter due to small vibrations and pulsation. They have a Type 304 stainless steel case for corrosion resistance and a dual-scale dial that reads in psi and kPa. Gauges *with NIST certificate* include a certificate of calibration traceable to NIST.

Colored-Case Gauges—
±1% Full-Scale Accuracy (Grade 1A)

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Bronze
- Connection: Brass NPT male
- Case Material: Polyester
- Lens Material: Polycarbonate
- Temperature Ranges:
  Ambient: –40° to +150°F
  Process: –40° to +150°F

Cases come in four colors for quick and easy visual identification of your pressure gauges. Dial is dual-scale for readings in both psi and kPa.

Available Pressure Ranges

Pressure Range psi	Pressure Range kPa	Num. Inc., psi	Grad. Marks, psi	Pressure Range psi	Pressure Range kPa	Num. Inc., psi	Grad. Marks, psi

To Order: Please specify pressure range in psi from the listing above and case color: black, blue, red, or yellow.

Dial Size	Pipe Size	Bottom Connection	
4″	¼″	4240K8	$80.48

Low Pressure Diaphragm Gauges with Safety Case—
±1% Mid-Scale Accuracy (Grade A)

- Use with compressed air and noncorrosive gases
- Diaphragm Material: Copper alloy
- Connection: Brass NPT male
- Case Material: Polyester
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: –4° to +140°F
  Process: –40° to +212°F

Designed with a copper alloy diaphragm to measure very low pressures. A solid front and blowout back protect anyone reading the front of the gauge in the event of diaphragm failure. They also have a dual-scale dial that gives readings in inches of H_2O/ounces per square inch or psi/inches of Hg.

Available Pressure Ranges (inches of H_2O/oz. per in.^{2})

Glycerin-Filled Brass-Case Gauges

NPT Male

- Accuracy: 2½″ Dial: ±1.5% full scale (not graded)
  4″ Dial: ±1% full scale (Grade 1A)
- Use with hydraulic oil, compressed air, and water
- Bourdon Pressure Tube Material:
  NPT and Quick-Disconnect Gauges: Copper alloy
  SAE Gauges: Phosphor bronze
- Connection: Brass
- Case Material: Brass
- Lens Material: Acrylic
- Temperature Ranges for NPT and Quick-Disconnect Gauges:
  Ambient: –4° to +140°F
  Process (2½″ Dial and 4″ Dial up to 1,500 psi): –4° to +140°F
  Process (4″ Dial above 1,500 psi): –4° to +212°F
- Temperature Ranges for SAE Gauges:
  Ambient: 0° to +160°F; Process: 0° to +160°F

For hydraulic applications, these gauges have a rugged, one-piece brass case and connection. Glycerin filled to reduce needle flutter due to vibrations and pulsation. Choose NPT male threads, SAE male straight threads, or a quick-disconnect tube connection (for information, see pages 298-300).

✓ Not available in pressure ranges 0-400 psi and above.

Low-Pressure Stainless Steel-Case Gauges—±1% Full-Scale Accuracy (Grade 1A)

- Use with compressed air, water, and hydraulic oil
- Diaphragm Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: Type 304 stainless steel
- Lens Material: Glass
- Temperature Ranges:
  Ambient: 0° to 140°F
  Process: 0° to 140°F

Designed with a phosphor-bronze diaphragm for use in very low pressure applications.

Available Pressure Ranges

Pressure Range	Numeral Increments	Grad. Marks	Pressure Range	Numeral Increments	Grad. Marks
oz./in.²			***in. of H_2O (Cont.)***		
0-10	2	0.2	0- 60	10	1

Dial Size	Pipe Size	Bottom Connection	
4″	¼″	4269K11	$122.58

Leak-Resistant Glycerin-Filled Gauges—±1% Full-Scale Accuracy (Grade 1A)

Bottom Connection

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material:
  Up to 1,000 psi: Phosphor bronze;
  1,500 psi and above:
  Beryllium copper, unless noted
- Connection: Brass NPT male, unless noted
- Case Material: Nylon
- Lens Material: Acrylic
- Temperature Ranges:
  Ambient: –40° to +150°F
  Process: –40° to +150°F

A unique bladder behind the dial absorbs changes in glycerin volume due to temperature changes; this prevents the glycerin from leaking and eliminates the air bubble in the dial face that can distort readings. Glycerin reduces needle flutter due to vibrations and pulsation.

Freeze-resistant gauges have an internal seal to prevent freezing, clogging, and corrosion.

Gauges ***with NIST certificate*** include a certificate of calibration traceable to NIST.

♦ Gauges with 0-1,500 psi and above have a Type 316L stainless steel Bourdon pressure tube and connection.

Auto-Shutoff Digital Gauges—±1% Full-Scale Accuracy (Grade 1A)

- Use with dry air and noncorrosive gases only
- Sensor Material: Type 316L stainless steel
- Connection: Type 304L stainless steel NPT male
- Case Material: ABS thermoplastic
- Lens Material: Glass with polycarbonate coating
- Temperature Ranges:
  Ambient: 30° to 122°F
  Process: 30° to 122°F

To save power, these gauges shut off automatically after three minutes. Gauges are powered by a 9-volt battery (included). They also have a 4-digit LCD for precise readings.

Pressure Range, psi	Resolution, psi	Dial Size	Pipe Size	LCD Ht.	Bottom Connection

For information about pressure gauges, see page 562.

Water Level (Altitude) Gauges—
±1% Full-Scale Accuracy (Grade 1A)

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: Aluminum with black coating
- Lens Material: Glass
- Temperature Ranges:
  Ambient: –40° to +180°F
  Process: –40° to +212°F

Ideal for measuring feet of head in pump and tank applications, these gauges have a dual-scale dial that reads in both feet of H_2O and psi. They have an additional needle that you can manually adjust to mark any point on the dial. Wall or panel mount with the attached flange and three mounting holes.

Available Pressure Ranges

High Accuracy Test Gauges—
±0.5% Full-Scale Accuracy (Grade 2A)

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: Aluminum with black coating
- Lens Material: Glass
- Temperature Ranges for Standard Gauges:
  Ambient: –40° to +150°F
  Process: –40° to +212°F
- Temperature Ranges for High Temp. Gauges:
  Ambient: –20° to +250°F
  Process: –20° to +250°F

Wall mount these highly accurate gauges using their attached flange with three mounting holes. All gauges have a dual-scale dial that gives readings in both psi and kPa.

For information about pressure gauges, see page 562.

Stainless Steel-Case Gauges—±2% Mid-Scale Accuracy (Grade B)

Dry with Bottom Connection

Glycerin Filled with Center Back Connection

- Use with compressed air, water, hydraulic oil, naphthalene, and nitric acid (95%)
- Bourdon Pressure Tube Material: Type 316 stainless steel
- Connection: Type 316 stainless steel NPT male
- Case Material: Type 304 stainless steel
- Lens Material: 1½″ Dial: Glass; 2½″ and 4″ Dials: Polycarbonate
- Temperature Ranges for Dry Gauges: Ambient: –20° to +200°F; Process: –20° to +200°F
- Temperature Ranges for Glycerin-Filled Gauges: Ambient: +20° to +200°F; Process: +20° to +200°F

Measure the pressure of corrosive liquids with these gauges that have a Type 304 stainless steel case and a Type 316 stainless steel pressure tube and connection. Required cutout for panel mount gauges is 1 45/64″ for gauges with a 1½″ dial, 2 17/32″ for gauges with a 2½″ dial, and 3 31/32″ for gauges with a 4″ dial.

Glycerin-filled gauges reduce needle flutter due to small vibrations and pulsation.

To Order: Please specify pressure range from the listing.

Stainless Steel-Case Gauges with Sanitary Quick-Clamp Connection

Dry

- Accuracy: Up to 60 psi: ±2% full scale (not graded); 100 psi and above: ±1.5% full scale (not graded)
- Use with water, dairy applications, and pharmaceutical applications
- Bourdon Pressure Tube and Diaphragm Material: Type 316 stainless steel
- Connection: Type 316 stainless steel quick-clamp (also known as tri-clamp)
- Case Material: Type 304 stainless steel
- Lens Material: Polycarbonate
- Temperature Ranges: Ambient: 0° to 150°F; Process: 0° to 250°F

A Type 316 stainless steel quick-clamp (tri-clamp) connection meets 3-A sanitary standard 74-02 requirements for liquid pressure and level-sensing devices. For information about quick-clamp connections, see page 208.

Glycerin-filled gauges reduce needle flutter due to vibrations and pulsation.

Stainless Steel-Case Gauges with Compression Tube Connections—±1.5% Full-Scale Accuracy (Not Graded)

Bottom Connection

- Use with compressed air, water, hydraulic oil, carbon dioxide, and alcohol
- Bourdon Pressure Tube Material: Type 304 stainless steel
- Connection: Type 316 stainless steel compression tube fitting
- Case Material: Type 304 stainless steel
- Lens Material: Polycarbonate
- Temperature Ranges: Ambient: 14° to 149°F; Process: 14° to 149°F

Designed to fit into your tubing process line, these gauges include a Type 316 stainless steel tee fitting that has a compression tube connection on each end. Fittings are compatible with Swagelok®, Yor-Lok, Parker A-Lok, and Let-Lok. Gauges have a dual-scale dial that gives readings in both psi and kPa. All are glycerin filled to reduce needle flutter due to vibrations and pulsation. Panel-mount gauge requires a 2 33/64″ panel cutout.

Stainless Steel-Case Gauges with Isolating Guard—
±1% Mid-Scale Accuracy (Grade A)

- Use with compressed air, water, hydraulic oil, and ammonia
- Bourdon Pressure Tube Material: Type 316 stainless steel
- Connection: Type 316 stainless steel NPT female
- Case Material: Type 304 stainless steel
- Lens Material: Acrylic
- Temperature Ranges for Dry Gauges: Ambient: –40° to +325°F Process: –40° to +250°F
- Temp. Ranges for Glycerin-Filled Gauges: Ambient: +33° to +250°F Process: +33° to +250°F

Dry with Dual Scale

A Type 316 stainless steel isolating guard with a Type 316 stainless steel diaphragm protects these gauges by preventing thick liquids from clogging the gauge internals. ***Glycerin-filled*** gauges reduce needle flutter due to vibrations and pulsation.

Single-scale gauges give readings in psi. Gauges with a ***dual-scale*** dial give readings in both psi and kPa.

- Temperature Ranges for Dry Gauges: Ambient: –40° to +260°F Process: 2½″ Dial: –40° to +260°F; 4″ Dial: –40° to +392°F
- Temp. Ranges for Glycerin-Filled Gauges: Ambient: 0° to +160°F; Process: 0° to +160°F

Dry with Bottom Connection

Measure the pressure of corrosive liquids with these gauges that have a Type 304 stainless steel case and a Type 316 stainless steel pressure tube and connection. ***Panel-mount bracket*** requires a 2⁷⁄₁₆″ panel cutout.

Glycerin-filled gauges reduce needle flutter due to vibrations and pulsation. Gauges ***with NIST certificate*** include a certificate of calibration traceable to NIST.

For information about pressure gauges, see page 562.

Leak-Resistant Glycerin-Filled Gauges—
±1% Full-Scale Accuracy (Grade 1A)

Bottom Connection

- Use with compressed air, water, hydraulic oil, and deionized water
- Bourdon Pressure Tube Material: Type 316 stainless steel
- Connection: Type 316 stainless steel NPT male
- Case Material: Nylon
- Lens Material: Acrylic
- Temperature Ranges: Ambient: –40° to +150° F Process: –40° to +200° F

A unique bladder behind the dial absorbs changes in glycerin volume due to temperature changes; this prevents the glycerin from leaking and eliminates the air bubble in the dial face that can distort readings. Glycerin reduces needle flutter due to vibrations and pulsation.

Extreme-Duty Mil-Spec Gauges—
±1% Full-Scale Accuracy (Grade 1A)

Bottom Connection

- Use with compressed air, water, hydraulic oil, salt water, and refrigerant
- Bourdon Pressure Tube Material: Inconel
- Connection: Type 316 stainless steel NPT male
- Case Material: Aluminum
- Lens Material: Polycarbonate
- Temperature Ranges: Ambient: +40° to +145° F Process: –4° to +145° F

The most shock and vibration resistant gauges we offer, these have a solid front aluminum case; Inconel and stainless steel internal parts; and a gearless, direct-drive design. Cases meet the environmental requirements of MIL-G-18997E and are salt spray and washdown tested. A solid front and blowout back protect anyone reading the front of the gauge in the event of pressure tube failure. Wall mount with the attached flange with three 7/32″ dia. mounting holes.

Gauges with Isolating Guard—
±1% Full-Scale Accuracy (Grade 1A)

Dry

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Type 316 stainless steel
- Connection: Type 316 stainless steel NPT female gauge guard
- Case Material: Polypropylene
- Lens Material: Dry Gauges: Glass; Glycerin-Filled Gauges: Acrylic
- Temperature Ranges for Dry Gauges: Ambient: 0° to 250° F Process: 0° to 400° F
- Temp. Ranges for Glycerin-Filled Gauges: Ambient: 0° to 200° F Process: 0° to 400° F

The attached guard provides good corrosion resistance by keeping your process liquid from coming in direct contact with gauge internals. Guard has a chrome-plated steel top, a Type 316 stainless steel bottom and diaphragm, and a PTFE gasket. All gauges have three 7/32″ dia. mounting holes. Case OD is 5 13/16″. Mounting hole circle is 5⅜″. Gauges also have an adjustable needle. Choose from dry and glycerin-filled gauges. ***Glycerin-filled*** gauges reduce needle flutter from vibrations and pulsation.

Test Gauges with Safety Case—±1% Full-Scale Accuracy (Grade 1A)

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Type 316 stainless steel
- Connection: Type 316 stainless steel NPT male
- Case Material: Polyester
- Lens Material: Acrylic
- Temperature Ranges for Dry Gauges:
  Ambient: –40° to +150°F
  Process: –40° to +212°F
- Temperature Ranges for Glycerin-Filled Gauges:
  Ambient: –4° to +150°F
  Process: –4° to +212°F

Lower Back Connection

A solid front and blowout back protect anyone reading the front of the gauge in the event of pressure tube failure. All gauges have three ¼″ dia. mounting holes. Case OD is 5 13/16″. Mounting hole circle is 5 3/8″.

Choose dry or glycerin-filled gauges. *Glycerin-filled* gauges reduce needle flutter due to vibrations and pulsation.

Single-scale gauges give readings in psi only. *Dual-scale* gauges give readings in both psi and kPa.

Luminescent gauges have a dial that glows in the dark after being exposed to light.

Ultra-High Accuracy Gauges with NIST Certificate—
±0.25% Full-Scale Accuracy (Grade 3A)

With Snap-On Flange

- Use with compressed air, water, and hydraulic oil
- Bourdon Pressure Tube Material: Inconel
- Connection: Type 316 stainless steel NPT male
- Case Material: ABS thermoplastic
- Lens Material: Acrylic
- Temp. Ranges: Ambient: –65° to +190° F
  Process: –65° to +400° F

These highly accurate gauges include a certificate of calibration traceable to NIST. A gearless direct-drive design, Inconel Bourdon pressure tube, and rugged ABS case give them high shock resistance and long life. *4 1/2″ and 6″ dials* have a snap-on flange with three mounting holes.

For information about gauges, see page 562.

Ultra-High-Accuracy Digital Pressure Gauges—±0.25% Full-Scale Accuracy

- Use with compressed air, water, and hydraulic oil
- Sensor Material: Type 316 stainless steel
- Connection: Type 316 stainless steel NPT male
- Case Material: Aluminum
- Lens Material: Polycarbonate
- Temperature Ranges:
  Ambient: –4° to +185° F; Process: –4° to +185° F

Gauges with pressure range up to 0-1,000 psi have a 3½-digit LCD. Those with a pressure range of 0-3,000 psi and above have a 4-digit LCD display. All have an on/off button except 3943K13, which has an on button.

Battery-powered gauges automatically shut off after five minutes and have a low-battery indicator. They are powered by two AA batteries (included). ***AC/DC-powered*** gauges accept 8-24 VAC or 9-32 VDC power and have 3-ft. wire leads for hardwiring.

Available Pressure Ranges (psi)

Vacuum and Compound Gauges—±2% Mid-Scale Accuracy (Grade B)

Vacuum Gauge with Center Back Connection

- Bourdon Pressure Tube Material:
  ABS-Case Gauges: Copper alloy
  Steel-Case Gauges: Brass
- Connection:
  ABS-Case Gauges: Copper alloy NPT male
  Steel-Case Gauges: Phosphor bronze NPT male
- Case Material: ABS thermoplastic or black-painted steel
- Lens Material: ABS-Case Gauges: Acrylic; Steel-Case Gauges: Polycarbonate
- Temp. Ranges:
  Ambient: –40° to +140° F; Process: –40° to +140° F

For general use with pumps and filters.

Vacuum Gauges

Gauges have a 30″ Hg to 0 vacuum range with 5″ Hg numeral increments and 0.5″ Hg graduation marks.

Panel-mount gauge requires a 1⅝″ panel cutout.

Dial Size	Pipe Size	Bottom Connection		Center Back Connection		Panel Mount Center Back Connection

Extreme-Accuracy Digital Pressure Gauges with NIST Certificate—±0.05% Full-Scale Accuracy

- Use with compressed air, water, and hydraulic oil
- Sensor Material: Type 316 stainless steel
- Connection: Type 316 stainless steel NPT male
- Case Material: 300 series stainless steel
- Lens Material: Polyester
- Temperature Ranges:
  Ambient: 0° to 150° F; Process: 0° to 150° F

Get precise readings with these 5-digit LCD gauges. Gauge accuracy is Grade 5A of ASME standard B40.7. All include a certificate of calibration traceable to NIST, low-battery indicator, auto-shutoff (select from never, 2 min., 5 min., 15 min., and 30 min.), bar graph function, min./max. function, tare function to zero out the gauge, and on/off button. Powered by three AAA batteries (included). Case is NEMA 4 rated (indoor/outdoor). All are CSA certified and FM approved as intrinsically safe for Class I, II, and III; Division 1; Groups A, B, C, D, E, F, and G; T4 temperature code.

Available Pressure Ranges (psi)

Pressure Range	Resolution	Pressure Range	Resolution	Pressure Range	Resolution

To Order: Please specify pressure range from the listing above.

Dial Size	Pipe Size	LCD Ht.	Bottom Connection	
3″	¼″	1⅛″	3584K31	$991.13

Dual-Scale Vacuum and Compound Gauges—±2% Mid-Scale Accuracy (Grade B)

Compound Gauge with Center Back Connection

- Bourdon Pressure Tube Material:
  Phosphor bronze
- Connection: Brass NPT male
- Case Material: Black-painted steel
- Lens Material: Polycarbonate
- Temperature Ranges:
  Ambient: –40° to +150° F
  Process: –40° to +150° F

No conversions necessary—these gauges have a dual-scale dial that gives readings in kPa in addition to inches of Hg and psi.

Panel-mount gauges require a panel cutout for installation: use a 2⅛″ cutout for 2″ gauges; a 2⅝″ cutout for 2½″ gauges; and a 3⅝″ cutout for 3½″ gauges.

Pressure and Temperature Gauges—
±2.5% Full-Scale Accuracy (Not Graded)

Center Back Connection

- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: Black-painted steel
- Lens Material: Acrylic
- Temperature Ranges: Ambient: –40° to +140° F/–40° to +60° C Process: +70° to +320° F/+20° to +160° C

A built-in bimetal thermometer lets you measure both pressure and temperature in boiler applications. Gauges have a dual-scale dial that gives pressure readings in psi and ft. of H_2O and temperature readings in °F and °C.

Side View

Available Pressure Ranges

Pressure Range, psi/ft. of H_2O	Numeral Increments, psi	Grad. Marks, psi
0 to 75/0 to 170	20	5
0 to 230/0 to 520★	50	10

★ Range listed is for bottom connection. For center back, it is 0-200 psi/0-460 ft. of H_2O.

To Order: Please specify pressure range from the listing above.

Dial Size	Pipe Size	Bottom Conn. Stem Lg.		Center Back Conn. Stem Lg.	
3¼″	½″	2⅜″	4013K61 $37.96	1⅞″	4013K62 $25.20

3-in-1 Compound Test Gauges—
±2% Mid-Scale Accuracy (Grade B)

- Bourdon Pressure Tube Material: Brass
- Connection: Neoprene hose with steel NPTF (Dryseal) male fitting
- Case Material: Steel
- Lens Material: Polycarbonate
- Temp. Ranges: Ambient: –40° to +150° F; Process: –40° to +150° F

For vacuum and pressure testing in hydraulic applications, these portable units have three dual-scale gauges in a single housing. The first gauge measures 30″ Hg to 0/0-150 psi (cm of Hg/kg/cm²); the second measures 0-600 psi (kg/cm²); and the third measures 0-5,000 psi (kg/cm²). An internal mechanism seals off the lower pressure-range gauges as the maximum pressure is exceeded.

O'all Dia.	Pipe Size	12″ Hose		36″ Hose	
6⁷⁄₁₆″	⅛″	4054K63	$308.96	4054K64	$305.25

Glycerin-Filled Vacuum and Compound Gauges—
±1.5% Full-Scale Accuracy (Not Graded)

Center Back Connection

- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: ABS thermoplastic
- Lens Material: Acrylic
- Temperature Ranges: Ambient: 0° to 140° F; Process: 0° to 140° F

Gauges are glycerin filled to reduce needle flutter from vibrations and pulsation. Their dual-scale dial reads in both inches of Hg/psi and kPa.

Available Vacuum/Pressure Ranges

Vacuum/Pressure Range in. of Hg/psi	kPa	Num. Inc., in. of Hg/psi	Grad. Marks, in. of Hg/psi

2½″	¼″	38465K41	$21.80	38465K42	$21.80

Digital Vacuum and Compound Gauges—±0.5% Full-Scale Accuracy

- Sensor Material: Type 17-4 PH stainless steel
- Connection: Type 17-4 PH stainless steel NPT female
- Case Material: Polycarbonate
- Lens Material: Glass
- Temperature Ranges: Ambient: –40° to +150° F; Process: +32° to +130° F

After one hour, these gauges automatically shut off to save battery power. They have a 4-digit LCD and measure 4″ Ht.×2½″ Wd.×1¾″ Dp. Powered by a 9-volt battery (sold separately below). ***Vacuum*** gauge displays inches of Hg and psi. ***Compound*** gauge displays psi, bar, kg/cm², and atmosphere.

	Vacuum/ Pressure Range	Reso-lution, psi	Pipe Size	LCD Ht.	Bottom Connection	
Vacuum	29.9″ Hg to 0	0.1	⅛″	½″	3840K8	$196.15
Compound	–14 to +1,000 psi	1	⅛″	½″	3840K6	216.59
9-volt Battery					71455K56	2.75

Glycerin-Filled Stainless Steel-Case Vacuum and Compound Gauges

Center Back Connection

- Accuracy: 1½″ and 2½″ Dials: ±1% mid scale (Grade A); 4″ Dial: ±1% full scale (Grade 1A)
- Bourdon Pressure Tube Material: 1½″ Dial: Phosphor bronze; 2½″ and 4″ Dials: Copper alloy
- Connection: 1½″ Dial: Brass NPT male; 2½″ and 4″ Dials: Copper alloy NPT male
- Case Material: Type 304 stainless steel
- Lens Material: 1½″ and 2½″ Dials: Polycarbonate; 4″ Dial: Acrylic
- Temperature Ranges: 1½″ Dial: Ambient: –4° to +140° F; Process: –4° to +140° F 2½″ and 4″ Dials: Ambient: –5° to +150° F; Process: –5° to +150° F

Case is made of Type 304 stainless steel for good corrosion resistance. Gauges are also glycerin filled to reduce needle flutter from vibrations and pulsation.

Panel mount bracket for standard gauge with 1½″ dial requires a 1³⁹⁄₆₄″ cutout; bracket for standard gauge with 2½″ dial requires a 2³¹⁄₆₄″ cutout. ***Gauges with NIST certificate*** include a certificate of calibration traceable to NIST.

To Order: Please specify vacuum/pressure range from the listing.

Refrigerant Ammonia Compound Gauges—±1.6% Full-Scale Accuracy (Grade B)

- Bourdon Pressure Tube Material: Type 316 stainless steel
- Connection: Type 316 stainless steel NPT male
- Case Material: Type 304 stainless steel
- Lens Material: Polycarbonate
- Temperature Ranges: Ambient: –40° to +200°F; Process: –40° to +200°F

Designed specifically for refrigerant applications, these gauges have a dial that displays the equivalent ammonia temperature at a given pressure. Ideal for use with chillers and refrigeration systems. **To Order:** Please specify pressure range from the listing below.

Available Vacuum/Pressure Ranges

Vacuum/ Pressure Range	Numeral Increments	Grad. Marks

Ultra-Low Vacuum Diaphragm Gauges

- Accuracy: 2½″ Dial: ±1.6% full scale (not graded); 4″ Dial: ±1% full scale (Grade 1A)
- Diaphragm Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: 2½″ Dial: Black-painted steel; 4″ Dial: Type 304 stainless steel
- Lens Material: 2½″ Dial: Acrylic; 4″ Dial: Glass
- Temp. Ranges: Ambient: 0° to 140°F; Process: 0° to 140°F

A sensitive internal diaphragm lets you measure very low vacuum with these gauges. ***Gauges with NIST certificate*** include a certificate of calibration traceable to NIST.

Available Vacuum Ranges (in. of H_2O)

Vacuum Range	Num. Inc.	Grad. Marks	Vacuum Range	Num. Inc.	Grad. Marks
15″ to 0	3	0.2	60″ to 0	10	1
30″ to 0	5	0.5	100″ to 0	20	2

To Order: Please specify vacuum range in inches of H_2O from the listing above.

Dial Size	Pipe Size	BOTTOM CONNECTION Standard		BOTTOM CONNECTION w/NIST Certificate	
2½″	¼″	4106K1	$57.08	3843K3	$140.42
4″	¼″	4106K2	122.58	3843K4	199.10

Ultra-High Accuracy Vacuum Gauges—±0.25% Full-Scale Accuracy (Grade 3A)

- Bourdon Pressure Tube Material: Phosphor bronze
- Connection: Brass NPT male
- Case Material: Aluminum
- Lens Material: Glass
- Temperature Ranges: Ambient: –40° to +250°F; Process: –40° to +250°F

Front Flange Bottom Connection

Ideal for testing and laboratory equipment, these highly accurate gauges have a large, dual-scale dial that gives readings in both inches of Hg and kPa. They also have a mounting flange with three mounting holes and an externally adjustable dial for calibration.

Dial Size	Pipe Size	Vacuum Range, in. of Hg/kPa	Numeral Increments, in. of Hg	Grad. Marks, in. of Hg	Flange Dimensions: Flange OD	Mount. Hole Circle	Mount. Hole Dia.	Front Flange Bottom Connection		Front Flange Lower Back Connection

For information about gauges, see page 562.

Gauge-Protecting Steam Siphon Tubes

Coiled tubes (also known as siphons and pigtails) protect non-liquid-filled gauges from high-temperature fluids and steam. Just add water to the coil to act as a barrier and prevent steam from coming in contact with your gauge internals.

Style A—Ideal for connecting a bottom-connection gauge to vertical pipe.

Style B—Use these tubes in applications where you have space constraints.

Style C—Extra bends in the tube give you better water retention for long gauge life.

Gauge Guards

Prolong the life and accuracy of your pressure gauges by protecting them from debris, sludge, and corrosive chemicals. All gauge guards (also known as diaphragm seals) have a corrosion-resistant thermoplastic body and fluoroelastomer diaphragm. The guards are furnished dry—fill with hydraulic fluid (not included; see page 2176 for ISO Grade 32 hydraulic oil) before use. Max. pressure is 150 psi at 70° F. Connections are NPT female.

Body Material	Connections Process	Connections Gauge	Max. Temp.	O'all Ht.		
PVC	1/4″	1/4″	140° F	2 11/16″	4143K11	$61.74
PVC	1/2″	1/4″	140° F	2 11/16″	4143K21	61.74

PVDF	1/2″	1/4″	280° F	2 11/16″	4354K81	129.62

High-Temperature Gauge Guards

With Flushing Port

Made with a Type 316L stainless steel body and diaphragm for resistance to high temperatures and pressures. Also known as diaphragm seals, these mini gauge guards have a housing diameter of just 1 9/16″. The guards are furnished dry—fill with glycerin (not included; see page 2038) before use. Pressure range is 100-2,500 psi. Max. temperature is 400° F. Connections are NPT female.

Guards with flushing port have a plugged port for in-service flushing of the gauge-guard chamber below the diaphragm. The port is 1/8″ NPT female.

Connections Process	Connections Gauge	Standard O'all Ht.			With Flushing Port O'all Ht.		
1/4″	1/4″	1 7/16″	3882K51	$82.40	2″	3882K54	$147.02
1/2″	1/4″	1 9/16″	3882K52	82.40	2 1/8″	3882K55	147.02
1/2″	1/2″	1 3/4″	3882K53	82.40	2 5/16″	3882K56	147.02

Pressure-Limiting Gauge Guards

Prevent the principle cause of pressure gauge failure: overpressure. These gauge guards block excess pressure from reaching your gauge internals, protecting them from blowout and keeping them in calibration.

Guards include three color-coded springs that allow you to set the shutoff pressure point anywhere from 50 to 5,000 psi—silver spring is for 50-120 psi, black spring is for 100-1,100 psi, and gold spring is for 1,000-5,000 psi. Once the guard is closed, it won't reopen until the pressure is reduced by 10% of the set pressure. No external reset is required. Max. temperature is 250° F. Connections are NPT female.

Connections Process	Connections Gauge	O'all Ht.	Brass Body		Type 316 Stainless Steel Body	
1/4″	1/4″	2 11/16″	1977K17	$171.03	1977K14	$215.17
1/2″	1/2″	2 11/16″	1977K13	201.75	1977K15	242.76

Pulsation-Damping Snubbers

Snubbers reduce the flow of fluids into your pressure instruments to dampen vibration, pulsation, and pressure spikes. Process connection is NPT male; gauge connection is NPT female.

Standard snubbers are for use in low-pressure applications. They have a miniature orifice—the smaller the orifice, the greater the reduction in flow. **To Order:** Please specify orifice size: 0.004″, 0.008″, or 0.015″.

Snubbers with filtering disc have a porous disc that keeps particles out of your pressure equipment. Orifice is 3/16″ for 1/8″ snubbers and 1/4″ for 1/4″ and 1/2″ snubbers. **To Order:** Please specify micron rating: 0.5, 1, 2-5, 7, 10, 40-45, or 75 microns.

Multi-Setting Pulsation-Damping Snubbers

Furnished with five different pistons so you can choose the precise amount of damping you need to reduce vibration and pulsation on your pressure system. To change piston, remove set screw and existing piston. Then, insert new piston and replace set screw.

All resist clogging and are self-cleaning. They are not micron rated. Process connection is NPT male; gauge connection is NPT female.

For information about gauges, see page 562.

Compact Pressure Indicators

For simple pressure indication in a process, these indicators change color when the minimum actuation pressure is reached. They're ideal for showing when pressure is present in a tank or compressed air line. Body material is brass. Max. input pressure is 150 psi; temperature range is 32° to 230° F. ***Panel-mount indicators*** require a panel cutout: 1/4″ for 1808K31 and 1/2″ for 1808K32.

Panel Mount — *End View When Actuated*

To Order: Please specify indicator color from those listed.

Low-Pressure Differential Gauges

Measure small pressure drops in air and noncorrosive gases. These differential pressure gauges are great for monitoring clogged filters, measuring fan and blower pressures, and checking air velocity. Their rugged aluminum case provides good shock and vibration resistance. Connect using either the side or back low- and high-pressure ports.

Compound Gauge

Side View

All have a silicone-rubber diaphragm sensing element, aluminum NPT female connections, and acrylic lens. Accuracy is ±2% full scale, unless noted. Max. input pressure is 15 psi. Ambient and process temperature ranges are 20° to 140° F.

Standard gauges display the difference between the low- and high-pressure ports. ***Compound gauges*** are for processes where the low- and high-pressure ports vary; they display a positive or negative difference.

Optional Portable Accessory Kit— Convert your differential-pressure gauge into a portable gauge. Kit includes a 9-ft., 3/16″ ID tube; two pipe-to-tube adapters; a stand-or-hang bracket; a terminal tube with holder; and carrying case.

Color-Band Differential Pressure Indicators

Colored bands let you identify with just a glance when a differential pressure limit is reached. Commonly used to indicate clogged filters.

They have a green/yellow/red dial that indicates multiple differential pressure points. For example, 2238K21 changes from green to yellow at 2 psid and from yellow to red at 2.5 psid.

All have a Type 316 stainless steel sensing element, 1/4″ NPT female connections, a glass-filled nylon case and a polyester lens. Accuracy is ±5% full scale; maximum input pressure is 300 psi. Port-to-port length is 3 1/4″. Ambient and process temperature ranges are –40° to +200° F.

Indication Points, psid

Pressure Test Plugs

Check the pressure in your process without permanently installing a gauge. Simply install the brass NPT male test plug into your process line; the required adapters (sold separately) have a 1/4″ NPT female connection on one end for connecting to your gauge and a stem on the other end for inserting into the test plug.

Standard plugs have an EPDM seal for use with liquids and gases. Max. input pressure is 1,000 psi; temp. range is –20° to +350° F. 1493K11 can be used only with the 0.063″ stem adapter. Gauge adapters are chromate-plated steel.

High-pressure plugs have fluoroelastomer seals for hydraulic applications up to 6,000 psi. Temp. range is –20° to +350° F. *Gauge adapter* has a brass body and Type 304 stainless steel stem.

Pipe Size	O'all Lg.

High-Pressure Gauge Adapter		3194K59	19.54

High-Pressure Differential Gauges

Monitor large pressure drops in high-pressure pump and filtration applications. Choose gauges with aluminum or Type 316 SS piston, case, and connections. All connections are NPT female.

Water Tight for Liquids

Gauges for liquids have an internal piston design for use with water and hydraulic oil. Aluminum gauges have Buna-N seals; Type 316 Stainless steel gauges have fluoroelastomer seals. Accuracy is ±2% full scale. Lens is acrylic. Max. input pressure is 3,000 psi. Ambient and process temp. ranges are –40° to +150° F. CSA certified.

Water-tight gauges for liquids have a NEMA 4X housing (washdown/corrosion resistant) and a piston design for use with water and hydraulic oil in extremely high-pressure washdown environments. They have Buna-N seals, a stainless steel piston, and an acrylic lens. Accuracy is ±2% mid scale. Max. input pressure is 6,000 psi. Ambient and process temp. ranges are –40° to +200° F.

Gauges for gases and liquids have a Buna-N diaphragm design for use with compressed air, water, and hydraulic oil. Lens is acrylic. Accuracy is ±2% full scale. Max. input pressure is 1,500 psi. Ambient and process temp. ranges are –40° to +150° F. CSA certified.

U-Tube Manometers

U-tube manometers measure low pressure or low differential pressure in a process. They use an indicating liquid with a known weight in a graduated tube bent to form two columns; as the liquid moves up and down the columns, the differential between the two columns gives you the pressure in your process. All have numeral increments of 1″ H_2O and graduation marks of 0.1″ H_2O. Not rated for accuracy.

Portable manometers have a flexible vinyl U-tube that rolls up for easy transport. Connections are barbed nylon for 3/16″ ID tubing. They include magnetic mounting clips and 3/4 oz. of concentrated green indicating liquid (specific gravity of 1).

Stationary manometers have a butyrate U-tube and brass compression fittings for 1/4″ OD tubing. They include magnetic mounting clips and 3/4 oz. of full-strength red indicating liquid (specific gravity of 0.826).

Wall-mount manometers have an aluminum frame with a rigid glass U-tube that can handle high input pressures. They include a pair of wall-mount brackets with two 0.2″ mounting holes, Type 316 stainless steel 1/4″ NPT female connections, an acrylic cover, and 2 oz. of full-strength green indicating liquid (specific gravity of 1).

Hook-on manometers have a butyrate U-tube and a brass needle valve with connections for 5/16″ ID tubing. Use for natural gas applications. Include a mounting hook, two mounting magnets, 4 ft. of neoprene tubing, and 1 oz. of concentrated green indicating liquid (specific gravity of 1).

Hand-Held Digital Manometers

Check differential pressure at multiple points in your process with these hand-held digital manometers. To save time you'd normally waste doing conversions, these let you select from various units of measure for pressure, differential pressure, and vacuum. Accuracy is ±0.5% full scale. FM approved as intrinsically safe for hazardous locations Class 1, Div. 1, Groups A, B, C, D, with temperature code T4. All have barbed connections for 1/8″ and 3/16″ ID rubber and vinyl tubing. They operate on one 9-volt battery (included) and measure 6 9/16″ Ht.×2 13/16″ Wd.

Dual-scale manometers give readings in inches of H_2O and kPa. They have an LCD with 7/16″ high digits.

Multiscale manometers give readings in inches of H_2O, psid, inches of Hg, kPa, bar, and millibars. They have both visual and audible overpressure alarms, and their memory function lets you store up to 20 readings. They have a backlit LCD with 7/16″ high digits.

Pressure Range	Resolution	Max. Input Pressure		
Dual-Scale for Air/Noncorrosive and Natural Gas				
0- 19.99 inches of H_2O	0.01	10	4125K21	$220.37
0-199.9 inches of H_2O	0.1	30	4125K23	170.00
0- 10 psid	0.01	30	4125K24	170.00
0- 30 psid	0.1	60	4125K25	170.00
Multiscale for Air/Noncorrosive and Natural Gas				
0- 20 inches of H_2O	0.01	10	4125K31	389.09
0-200 inches of H_2O	0.1	30	4125K33	327.86
0- 10 psid	0.01	30	4125K36	327.86
0- 20 psid	0.01	60	4125K35	327.86
Optional Nylon Carrying Case			4125K11	60.00

Compact Inclined-Scale Manometers

Inclined-scale manometers are more compact and easier to read than traditional U-tube manometers. Accuracy is ±3% full scale. Max. input pressure is 10 psi. Furnished with mounting screws, 8 ft. of flexible thermoplastic tubing, and 3/4 oz. of indicating liquid (see below for color and specific gravity). They have a styrene-acrylonitrile housing with barbed connections for 1/8″ ID tubing.

Air pressure manometers measure pressure, differential pressure, and vacuum. ***Air velocity*** manometers include a 12″ stainless steel pitot tube.

Range	Color	Indicating Liquid Specific Gravity	O'all Ht.	O'all Wd.		
Air Pressure						
0-3 in. of H_2O	Red	0.826	5 15/16″	7 7/16″	3974K1	$40.56
0-7 in. of H_2O	Blue	1.91	5 15/16″	7 7/16″	3974K2	97.23
Air Velocity						
0- 7,000 ft./min.	Red	0.826	5 15/16″	7 7/16″	3974K3	121.82
0-10,500 ft./min.	Blue	1.91	5 15/16″	7 7/16″	3974K4	149.12

Manometer Indicating Liquids

We've got the liquid refills you need for your manometers. For accurate readings, make sure you select a liquid that has the same specific gravity as the original liquid in your manometer.

Concentrated Liquid Refills— When added to distilled water, these refills act as a dye that improves the visibility of the water column for accurate gauge readings.

Full-Strength Liquid Refills— These refills are used full-strength to improve visibility for accurate gauge readings.

Color	Specific Gravity	Size	Temp. Range		
Concentrated Liquid Refills					
Green	1	3/4 oz.	+35° to +150°F	3985K71	$12.51
Green	1	15 oz.	+35° to +125°F	4037K22	69.00
Full-Strength Liquid Refills					
Red	0.826	3/4 oz.	–40° to +140°F	3974K7	8.57
Red	0.827	16 oz.	+35° to +125°F	4037K21	45.50
Blue	1.91	3/4 oz.	+32° to +140°F	3974K11	102.02
Blue	1.75	7 oz.	+20° to +150°F	4037K26	121.88

Pressure/Velocity Pitot Tubes for Air Ducts

Use these with the hand-held digital manometers on this page to measure velocity pressure (the difference between static pressure and total pressure) in 10″ diameter and larger ducts. All have a 5/16″ OD tube with inch graduation marks on both sides. They come with an air-velocity slide chart and direct-reading flow chart. Comply with AMCA (Air Movement and Control Association) and ASHRAE (American Society of Heating, Refrigerating, and Air-Conditioning Engineers) specifications.

Insertion Dp.			Insertion Dp.		
8″	4039K17	$64.03	36″	4039K14	$83.30
12″	4039K11	65.73	48″	4039K15	85.00
18″	4039K12	70.83	60″	4039K16	104.37
24″	4039K13	73.67			

Static Pressure Tubes for Air Ducts

Use these brass fittings and tubes with the hand-held digital manometers on this page to sense static pressure drop across an air filter, cooling coil, and blower in air-handling equipment. All mount in a 3/8″ hole in duct.

Tube style have higher accuracy and are for higher flow applications. They have a 3/16″ OD tube and a 4″ insertion depth.

Fitting style are for use in smooth, low-flow applications that don't require high accuracy.

Connection Size			
Tube Style			
A 1/4″ OD Compression	4077K51	$11.22	
B 1/8″-3/16″ Barb	4077K52	10.31	
Magnet-Mount Tube Style			
C 3/16″ ID Barb	4077K53	15.87	
Fitting Style			
D 1/4″ OD Compression	4077K55	6.01	
E 1/8″-3/16″ Barb	4077K56	4.65	

About Pressure Transducers

Pressure transducers (also known as pressure sensors and pressure transmitters) sense and then convert pressure into electrical output signals. You can send the output signals to a monitoring device (see panel meters on page 950) where they can be saved, displayed, or used to control pressure in a system.

The example at right shows a transducer with a 0-100 psi pressure range and a 4-20 mA output signal. Because the relationship between pressure and output is linear, in this case the transducer produces a 4 mA signal at 0 psi, a 12 mA signal at 50 psi, and a 20 mA signal at 100 psi.

Maximum Pressure—The highest pressure a transducer can withstand without damage.

Pressure Transducers

- Use with compressed air, water, and hydraulic oil
- Accuracy: See table
- Repeatability: See table
- Response Time:
  0.5% Accuracy Switches: 4 milliseconds
  0.25% Accuracy Switches: 1 millisecond
- Pressure Connection: Type 316 stainless steel NPT male
- Case Material: ***3196K***: Type 316L stainless steel; ***3200K***: Type 304 stainless steel
- Power Supply: ***3196K***: 8-30 VDC; ***3200K***: 10-30 VDC
- Electrical Connection: DIN connector with screw terminals
- Temp. Ranges: Ambient: 32° to 176° F; Process: 32° to 176° F

Pressure transducers provide remote pressure monitoring for automated applications. All have Type 316 stainless steel wetted parts. ***3196K*** switches with a range of 0-200 psi and up also have Type 13-8 PH stainless steel wetted parts. ***3200K*** switches with a range of 0-500 psi and above also have Type 17-4 PH stainless steel wetted parts. All are CE approved.

Transducers with NIST certificate include a certificate of calibration traceable to the National Institute of Standards and Technology (NIST).

Switches with 0.5% accuracy are 1⅞″ Wd.×2⅜″ Ht.
Switches with 0.25% accuracy are 1⅞″ Wd.×3¾″ Ht.

Available Pressure Ranges (psi)

Pressure Range	3196K Maximum Pressure	3200K Maximum Pressure	Pressure Range	3196K Maximum Pressure	3200K Maximum Pressure

■ Not available in 0-10 psi range.

Extended-Life Compact Pressure Transducers

- Use with compressed air, water, and hydraulic oil
- Accuracy: ±2% full scale
- Repeatability: ±0.1% full scale
- Response Time: 10 milliseconds to 63% of full scale
- Pressure Connection: Type 316 stainless steel NPT male
- Case Material: Type 316 stainless steel
- Power Supply: 4.5 to 5.5 VDC
- Electrical Connection: 12″ wire leads
- Temperature Ranges:
  Ambient: –40° to +257° F; Process: +2° to +257° F

Get long-term performance out of these transducers that handle high vibrations, shock, and high-cycle pressure while maintaining high accuracy. And at only 2⅜″ tall, they'll fit into tight spaces. They have ceramic, Type 316 stainless steel, and fluoroelastomer wetted parts for corrosive applications.

Available Pressure Ranges (psi)

Pressure Range	Maximum Pressure	Pressure Range	Maximum Pressure
0-15	75	0- 100	300
0-30	150	0- 200	600
0-50	250	0- 500	1,000
0-75	375	0-1,000	2,000

To Order: Please specify pressure range from the listing above.

Output Signal	Pipe Size		
0.5 to 4.5 VDC, 3 wire	⅛″	**2388K11**	$285.71
0.5 to 4.5 VDC, 3 wire	¼″	**2388K21**	285.71

Extreme-Temperature Pressure Transducers

- Use with plastic and polymer extrusions, compressed air, water, and hydraulic oil
- Accuracy: ±1% full scale
- Repeatability: ±0.2% full scale
- Response Time: Not rated
- Pressure Connection: Type 15-5 PH stainless steel UNF male straight thread
- Case Material: Aluminum
- Power Supply: 14-36 VDC
- Electrical Connection: Includes adapter with 10-ft. wire leads
- Max. Temperatures (Min. Temperatures Not Rated): Ambient: 185° F; Process: 750° F

Measure pressure in extremely high temperature processes up to 750° F. These transducers have an 18″ armored cable filled with sodium potassium that keeps the sensing component away from the process while maintaining good accuracy. Wetted parts are Type 15-5 PH stainless steel with abrasion-resistant coating.

Available Pressure Ranges (psi)

Pressure Range	Maximum Pressure	Pressure Range	Maximum Pressure
0- 500	1,000	0- 3,000	6,000
0- 750	1,500	0- 5,000	10,000
0-1,000	2,000	0- 7,500	15,000
0-1,500	3,000	0-10,000	20,000

To Order: Please specify pressure range from the listing above.

Output Signal	Connection Size		
4-20 mA, 2 wire	½″-20 UNF	**2529K96**	$1,037.11

Washdown Vacuum and Pressure Transducers

- Use with compressed air, water, and hydraulic oil
- Accuracy: See table
- Repeatability: See table
- Response Time: 5 milliseconds
- Pressure Connection: Type 316 stainless steel NPT male
- Case Material: 300 series stainless steel
- Power Supply: 10-36 VDC
- Electrical Connection: 36″ long, PVC-shielded cable
- Temperature Ranges:
  Ambient: –20° to +180° F; Process: –20° to +180° F

For washdown and corrosion resistance, these transducers have a NEMA 4X electrical enclosure and 17-4 PH stainless steel wetted parts.

Available Pressure Ranges

Pressure Range	Maximum Pressure	Pressure Range	Maximum Pressure
Vacuum Transducer		***Pressure Transducers (Cont.)***	
30″ Hg to 0	60 psi	0- 300 psi	600 psi
Pressure Transducers		0- 500 psi	1,000 psi

♦ Not available in 30″ Hg to 0, and 0-15, 0-30, 0-60, and 0-5,000 psi.

For information about pressure transducers, see page 581.

Digital-Display Pressure Transducers

- Use with compressed air, water, and hydraulic oil
- Accuracy: ±0.25% full scale
- Repeatability: ±0.25% full scale
- Response Time: 50 milliseconds
- Pressure Connection: Type 316 stainless steel NPT male
- Case Material: NEMA 4X polycarbonate and ABS
- Power Supply: 8-32 VDC
- Electrical Connection: 36″ wire leads
- Temperature Ranges:
  Ambient: –4° to +185° F; Process: 32° to 158° F

An electrical output added to a general service pressure gauge provides good accuracy and the convenience of both local and remote pressure monitoring. They have Type 316 stainless steel wetted parts and a polycarbonate lens. Housing size is 3″ Ht.×3½″ Wd.×2″ Dp. Digits are ½″ high.

Available Pressure Ranges (psi)

Pressure Range	Maximum Pressure	Numeral Increments
0- 30	60	0.1
0- 60	120	0.1
0- 100	200	0.1
0- 300	600	1
0- 500	1,000	1
0-1,000	2,000	1

To Order: Please specify pressure range from the listing above.

Output Signal	Pipe Size		
4-20 mA, 2 wire	¼″	2821K61	$397.07

Programmable Digital-Display Pressure Transducers

- Use with compressed air, water, and hydraulic oil
- Accuracy: 0.15% full scale
- Repeatability: <0.05% full scale
- Response Time: <10 milliseconds
- Pressure Connection: Types 316 and 17-4 PH stainless steel NPT male
- Case Material: Epoxy-coated aluminum
- Power Supply: 12-36 VDC
- Electrical Connection: Screw terminals with ¾″ female conduit connection
- Temperature Ranges:
  Ambient: –4° to +158° F;
  Process: –22° to +221° F

An LCD makes it easy to view pressure ratings at the point of use. And in addition to multiple units of measure (psi, bar, millibar, mA, % of span, millimeters, meters, inches, feet, Pa, and kPa), you can program these transducers to show bar graphs, trend displays, and two extra lines of text for minimum and maximum pressure readings and sensor temperature. They have ½″ high digits, a NEMA 4 (indoor/outdoor) case, stainless steel wetted parts, and an impact-resistant glass lens. CE approved.

Pressure Range, psi	Maximum Pressure, psi	Output Signal	Pipe Size		
0- 5	30	4-20 mA, 2 wire	½″	3199K21	$829.54
0- 25	150	4-20 mA, 2 wire	½″	3199K22	829.54
0-100	500	4-20 mA, 2 wire	½″	3199K23	829.54

Differential Pressure Transducers for Tubing

- Use with air and dry inert gases
- Accuracy: ±1.5% full scale
- Repeatability: 0.05% full scale
- Response Time: 5 milliseconds
- Pressure Connection: Polyester barb
- Case Material: Polyester
- Power Supply: 5 VDC
- Electrical Connection: 12″ wire leads
- Temperature Ranges:
  Ambient: 32° to 140° F; Process: 32° to 140° F

Use these tiny transducers to test very low pressure differentials in HVAC applications.

Differential Pressure Range	Max. Pressure, psi	Output Signal	For Tube ID		
0- 2″ H_2O	1	0.25 to 4 VDC, 3 wire	3⁄16″	2948K11	$147.06
0- 5″ H_2O	1	0.25 to 4 VDC, 3 wire	3⁄16″	2948K13	147.06
0-10″ H_2O	1	0.25 to 4 VDC, 3 wire	3⁄16″	2948K14	147.06

Vacuum and Pressure Transducers

- Accuracy: ±0.25% full scale
- Repeatability: ±0.05% full scale
- Response Time: 0.5 milliseconds
- Pressure Connection: Type 17-4 PH stainless steel NPT male
- Case Material: Type 316 stainless steel
- Power Supply: 7-35 VDC
- Electrical Connection: 36″ long PVC-shielded cable
- Temperature Ranges:
  Ambient: –5° to +180° F; Process: –5° to +180° F

Get high accuracy when monitoring pressure up to 100 psi and vacuum down to 30″ Hg. CE approved.

Available Vacuum/Compound Ranges

Vacuum/Pressure Range	Maximum Pressure
Vacuum Transducer	
30″ Hg to 0/_____	30 psi
Compound Transducers	
30″ Hg to 0/0 to 15 psi	60 psi
30″ Hg to 0/0 to 45 psi	120 psi
30″ Hg to 0/0 to 100 psi	200 psi

To Order: Please specify vacuum or compound range from the listing above.

Output Signal	Pipe Size		
4-20 mA, 2 wire	¼″	3591K21	$408.76

Differential Pressure Transducers

- Use with liquids and gases
- Accuracy: ±0.25% full scale
- Repeatability: 0.05% full scale
- Response Time: 30 to 50 milliseconds
- Pressure Connection: Type 17-4 PH stainless steel NPT female
- Case Material: Aluminum
- Power Supply: 9-30 VDC
- Electrical Connection: Screw terminals
- Temperature Ranges:
  Ambient: 0° to 175° F; Process: 0° to 250° F

Take differential pressure measurements of liquids as well as gases. All have a NEMA 4 (indoor/outdoor) aluminum case with a ⅞″ conduit opening. Wetted parts are Type 300 series and 17-4 PH stainless steel, fluoroelastomer, and silicone. Furnished with mounting brackets and hardware.

Available Pressure Ranges (psi)

Pressure Range	Maximum Pressure	Pressure Range	Maximum Pressure
0-1	250	0-10	250
0-2	250	0-25	250
0-5	250	0-50	250

To Order: Please specify pressure range from the listing above.

Output Signal	Pipe Size		
4-20 mA, 2 wire	¼″	9917K5	$687.93
0-5 VDC, 3 wire	¼″	9917K6	687.93

Dial-Indicating Differential Pressure Transducers

- Use with air and noncombustible, noncorrosive gases
- Accuracy: ±2% full scale
- Repeatability: Not rated
- Response Time: Not rated
- Pressure Connection: Aluminum NPT female
- Case Material: Aluminum
- Power Supply: 10-35 VDC
- Electrical Connection: Screw terminals
- Temperature Ranges:
  Ambient: 20° to 120° F;
  Process: 20° to 120° F

Monitor low differential pressure locally and remotely. Excellent for HVAC systems. Transducers have an acrylic lens and silicone diaphragm.

Available Pressure Ranges

Pressure Range	Maximum Pressure	Pressure Range	Maximum Pressure
0-0.5″ H_2O	25 psi	0- 6″ H_2O	5 psi
0-1″ H_2O	25 psi	0-10″ H_2O	5 psi
0-2″ H_2O	0.36 psi	0-20″ H_2O	20 psi
0-3″ H_2O	5 psi	0-30″ H_2O	20 psi

To Order: Please specify pressure range from the listing above.

Output Signal	Dial Size	Pipe Size		
4-20 mA, 2 wire	4″	⅛″	38525K21	$288.50

For information about electrical switches, see page 855.

About Pressure and Vacuum Switches

Pressure switches provide alarm, shutdown, and control functions for equipment.

Actuation Point— The point at which the switch actuates; it's also known as setpoint. Most of our switches have an adjustable actuation point that can be set to actuate anywhere within its actuation range. For best results, choose a switch with a pressure range where your required actuation point is close to the middle of its actuation range.

Deactuation Point— The point at which the switch resets itself.

Deactuation range, also known as deadband, is the difference between the actuation point and the deactuation point. In the example at right, the switch actuates when the pressure reaches 100 psi. When the pressure drops to 90 psi, the switch deactuates, so the switch has a deactuation range of 10 psi.

Repeatability— The ability of a switch to repeatedly actuate at the actuation point under consistent operating conditions. The percentage shown is the possible variance from the actuation point.

Differential Switches— These respond to the difference in pressure between two pressure connections. When the differential pressure exceeds the actuation point, the switch is activated.

Electrical Switches— All of our switches are Single Pole, Double Throw (SPDT), unless noted. SPDT contacts are a set of single contacts that open or close a single circuit. Wire as either normally open or normally closed to actuate as the pressure increases or decreases. For more information about electrical switches, see page 855.

Tamper-Resistant Nonadjustable Pressure Switch

- Repeatability: ±1 psi or ±5% of actuation point, whichever is greater
- Pressure Sensing Element: Buna-N diaphragm-sealed piston
- Pressure Connection: 1/8″ brass NPT male
- Case Material: Brass
- Electrical Switch: SPDT, 10 amps at 125/250 VAC
- Temp. Ranges: Ambient: –40° to +250° F; Process: –40° to +250° F

This tamper-resistant switch has fixed actuation and deactuation points. Use with compressed air, water, and hydraulic oil. Deactuation point is fixed at approximately 15% above or below the actuation point. Max. pressure is 2,000 psi. Switch has a NEMA 4 (indoor/outdoor) and NEMA 13 (dust/oil resistant) enclosure and #8-32 screw terminals. Wetted parts are brass and Buna-N. UL recognized. **To Order:** Please specify actuation point from 10 to 300 psi in 5 psi increments.

3454K1 ..... $48.08

Pressure Switches

- Repeatability: ±1 psi or ±5% of actuation point, whichever is greater
- Pressure Sensing Element: Buna-N diaphragm-sealed piston
- Pressure Connection: Brass NPT male
- Case Material: Brass
- Electrical Switch: SPDT, 10 amps at 125/250 VAC
- Temp. Ranges: Ambient: –40° to +250° F; Process: –40° to +250° F

Sized just right for tight spots, these switches have an adjustable actuation point. Use with compressed air, water, and hydraulic oil. Max. pressure is 250 psi. Connect with spade terminals. Wetted parts are brass and Buna-N. UL recognized.

Actuation Range, psi	Deactuation Range, psi	Pipe Size		
2- 10	0.5- 1.5	1/8″	**3460K21**	$28.14
6- 30	0.9- 4.5	1/8″	**3460K41**	28.14
20-120	3 -18	1/8″	**3460K61**	28.14

Easy-Adjust High-Pressure Switches

NEMA 4

- Repeatability:
  All 1,000, 1,500, and 2,500 Max. psi Switches: ±1% of actuation range
  8,000 and 10,000 Max. psi Switches: ±1.5% of actuation range
- Pressure Sensing Element:
  Standard Switches with 1,000, 1,500, and 2,500 Max. psi: Buna-N diaphragm
  Standard Switches with 8,000 and 10,000 Max. psi: Type 303 stainless steel piston
  Switches for Oxygen Service: Fluoroelastomer diaphragm
- Pressure Connection: Brass NPT male
- Case Material: Aluminum with corrosion-resistant coating
- Electrical Switch: SPDT, 5 amps at 125/250 VAC
- Temperature Ranges:
  Ambient: 0° to +160° F; Process: –10° to +200° F

For high-pressure processes such as pump and hydraulic power applications, these switches withstand maximum pressures of at least 1,000 psi. They have a set screw protected by an outer ring for easy adjustment of your actuation point. Use with compressed air, water, and hydraulic oil. Wetted parts are brass, Type 316L stainless steel, and Buna-N. Diameter is 1 1/4″ for all; for height, see the table. All are UL recognized, CSA certified, and CE approved. Pipe size for all switches with maximum pressure of 1,000 to 2,500 psi is 1/8″. Switches with an 8,000 and 10,000 psi maximum pressure have a pipe size of 1/4″.

Switches ***for oxygen service*** come cleaned and bagged for use with oxygen.

Switches with *NEMA 1 enclosures* (indoor use only) have 1/4″ quick-disconnect terminals; switches with *NEMA 4 enclosures* (indoor/outdoor) have 20″ wire leads.

Easy-Adjust Vacuum and Pressure Switches

- Repeatability: ±2% of actuation range
- Pressure Sensing Element: Buna-N diaphragm-sealed piston
- Pressure Connection: Brass NPT male
- Case Material: Brass and polysulfone
- Electrical Switch: SPDT, 5 amps at 125/250 VAC
- Temperature Ranges for Vacuum Switches: Ambient: 0° to 165° F; Process: 0° to 165° F
- Temperature Ranges for Pressure Switches: Ambient: –20° to +165° F; Process: –20° to +165° F

Change your actuation point with just a simple twist of the outer ring. Use with compressed air, water, and hydraulic oil. Wetted parts are brass and Buna-N.

Switches with *NEMA 1 enclosures* (indoor use only) have 1/4″ quick-disconnect terminals and are UL recognized; switches with *NEMA 4 enclosures* (indoor/outdoor) have 12″ wire leads and are UL listed.

For information about pressure switches, see page 583. For information about electrical switches, see page 855.

Vacuum and Pressure Switches

NEMA 1

- Repeatability: ±2% of actuation range
- Pressure Sensing Element: Buna-N diaphragm-sealed piston
- Pressure Connection: Brass dual-threaded 1/2″ NPT male × 1/8″ NPT female, unless noted
- Electrical Switch: SPDT, 10 amps at 125/250 VAC
- Temperature Ranges: Ambient: –20° to +165° F Process: –20° to +165° F

A thumbwheel lets you easily adjust your actuation point. Use with compressed air, water, and hydraulic oil. Wetted parts are brass and Buna-N, except for 40925K91, which has nickel-plated aluminum and Buna-N parts. All have screw terminals.

NEMA 1 (indoor use only) switches measure 3 5/8″ Ht. × 2 13/16″ Wd. UL recognized and CSA certified. ***NEMA 4*** (indoor/outdoor) switches have an aluminum enclosure with a 1/2″ female conduit connection. They measure 4 1/16″ Ht. × 3 3/16″ Wd. UL listed and CSA certified.

Actuation Range	Deactuation Range	Maximum Pressure		
NEMA 1 Vacuum Switch				
30″ to 0.5″ Hg	–0.3″ to –1.7″ Hg	30″ Hg	**40925K91★**	$91.54

3 - 90 psi	0.5- 8 psi	1,000 psi	**40925K12**	105.62

★ Pressure connection is nickel-plated aluminum.

High-Temperature Pressure Switches

- Repeatability: ±1.5% of actuation range
- Pressure Sensing Element: Type 316 stainless steel diaphragm
- Pressure Connection: NPT female Type 316 stainless steel
- Case Material: Epoxy-coated aluminum
- Electrical Switch: SPDT, 15 amps at 125/250/480 VAC
- Temp. Ranges: Ambient: –40° to +160° F Process: –70° to +400° F

Choose for liquid processes up to 400° F. Use with compressed air, water, and hydraulic oil. All switches are housed in a NEMA 4X enclosure (washdown/corrosion resistant) with screw terminals and a 1/2″ NPT female conduit connection. Wetted parts are Type 316 stainless steel. UL and C-UL listed, and CE approved.

Switches with ***dual actuation point*** have two built-in switches, each controlling its own electrical circuit, allowing you to set two actuation points from a single pressure port.

Actuation Range, psi	Deactuation Range, psi	Maximum Pressure, psi	Pipe Size		
Single Actuation Point					
5- 30	1 - 3	1,500	1/2″	**47515K71**	$176.47
10- 100	1 - 8	1,500	1/2″	**47515K72**	176.47

0- 100	0.4- 1.6	100	1/2″	**47515K82**	502.35
0- 300	4 - 18	300	1/2″	**47515K83**	404.71

Washdown Pressure Switches

Dual Actuation Point

- Repeatability: ±1% of actuation range
- Pressure Sensing Element: Single Actuation Point: Fluoroelastomer diaphragm-sealed piston Dual Actuation Point: Fluoroelastomer diaphragm
- Pressure Connection: Type 316L stainless steel NPT female
- Case Material: Epoxy-coated aluminum
- Electrical Switch: SPDT, 15 amps at 125/250/480 VAC
- Temperature Ranges: Ambient: –20° to +150° F Process: +20° to +300° F

Hose down these switches—they'll still work. They're housed in a NEMA 4X enclosure (washdown/corrosion resistant). Use with compressed air, water, and hydraulic oil. Connect with screw terminals and 3/4″ NPT female conduit. Wetted parts are Type 316 stainless steel and fluoroelastomer. UL listed, CSA certified, and CE approved.

Dual Actuation Point— Two built-in switches, each controlling its own electrical circuit, allow you to set two actuation points from a single pressure port.

Actuation Range	Maximum Pressure, psi	Pipe Size	***Single Actuation Point*** Deactuation Range	Dimensions, Ht. × Wd.			***Dual Actuation Point*** Deactuation Range	Dimensions, Ht. × Wd.

Hazardous-Location Pressure Switches

Standard

Compact

Standard Switches

- Repeatability: ±1% of actuation range
- Pressure Sensing Element: Fluoroelastomer diaphragm-sealed piston
- Pressure Connection: Type 316L stainless steel NPT female
- Case Material: Epoxy-coated aluminum
- Electrical Switch: SPDT, 15 amps at 125/250/480 VAC
- Temperature Ranges: Ambient: –20° to +150° F Process: +20° to +300° F

Compact Switches

- Repeatability: ±1% of actuation range
- Pressure Sensing Element: Type 316 stainless steel diaphragm-sealed piston
- Pressure Connection: Type 316 stainless steel NPT female
- Case Material: Aluminum
- Electrical Switch: SPDT, 5 amps at 125/250 VAC
- Temperature Ranges: Ambient: –20° to +150° F Process: –20° to +200° F

Use in hazardous locations with water, compressed air, and hydraulic oil. Wetted parts are Type 316 stainless steel for all; *standard switches* also have fluoroelastomer. All are UL listed, CSA certified, and CE approved. ***Standard*** switches meet NEMA 7 for hazardous location Class I, Divisions 1 and 2, Groups B, C, and D; and NEMA 9 for hazardous location Class II, Divisions 1 and 2, Groups E, F, and G. They have screw terminals and a 3/4″ NPT female conduit connection. ***Compact*** switches meet NEMA 4 for indoor and outdoor use, and NEMA 7 for hazardous location Class I, Division 1, Groups A, B, C, and D. They have 12″ wire leads and a 1/2″ NPT male conduit connection.

For information about pressure switches, see page 583. For information about electrical switches, see page 855.

High-Accuracy Pressure Switches

- Repeatability: ±0.5% of actuation range
- Pressure Sensing Element: Type 17-4 PH stainless steel
- Pressure Connection: Type 316 stainless steel Standard: NPT female; Digital: NPT male
- Case Material: Epoxy-coated aluminum
- Electrical Switch: SPDT, 10 amps at 250 VAC
- Temperature Ranges: Ambient: –20° to +180° F Process: –20° to +180° F

Digital

A precision sensor similar to those in pressure transducers gives these switches very high repeatability for critical applications. All switches are housed in a NEMA 4X (washdown/corrosion resistant) enclosure with a ¾″ NPT female conduit connection. Wetted parts are Types 316 and 17-4 PH stainless steel. Dimensions for all are 5″ Ht.×4″ Wd.

Digital switches have an LED front panel with ½″ high digits that shows current pressure, actuation point, and deactuation point. Adjust your settings using the keypad for higher precision than you'll get from a dial or thumbwheel. Operates on 110 VAC, 50/60 Hz.

Well-Water Pump and Air-Compressor Pressure Switches

- Repeatability: ±5% of actuation range
- Pressure Sensing Element: Buna-N coated nylon diaphragm, unless noted
- Pressure Connection: Zinc NPT female, unless noted
- Case Material: Polycarbonate, unless noted
- Electrical Switch: Double Pole Single Throw (DPST), Normally Closed (see table for amp ratings)
- Maximum Temperatures (Minimum Not Rated): Ambient: 160° F; Process: 212° F

Air Compressor Switch with Unloader Valve

Control a pump or an air compressor with these switches. All are double pole single throw, normally closed (DPST-NC); they'll turn two circuits from "on" to "off." Connect to electricity using screw terminals; all have a ⅞″ hole for ½″ conduit. UL listed and CSA certified. Maximum pressure not rated.

Well-water pump pressure switches are for automatic well-water pumps and water pumping systems. Wetted parts are zinc alloy and Buna-N coated nylon. Dimensions are 3³⁄₁₆″ Ht.×3⅝″ Wd.

Air-compressor switches measure 3⁷⁄₁₆″ Ht.×3⅝″ Wd.

Air-compressor switches with unloader valve exhaust air into compression chambers to provide no-load motor starting. Dimensions are 3⅞″ Ht.×3½″ Wd.

Air-compressor switches with unloader valve and reset are just like the switches above, but allow manual as well as automatic operation. Dimensions are 3¼″ Ht.×3½″ Wd.

★ Has a neoprene diaphragm, zinc-plated steel pressure connection, and a steel case.

Miniature Digital Pressure Switches

- Repeatability: ±0.2% of actuation range
- Pressure Sensing Element: Silicone
- Pressure Connection: Nickel-plated brass
- Case Material: Polybutylene terephthalate
- Electrical Switch: 80 milliamps @ 28 VDC; see table for switch output
- Temperature Ranges: Ambient: 32° to 122° F Process: 32° to 122° F

⅛″ NPT Male

Ultra compact for fitting into tight spaces. Ideal for use with a programmable logic controller (PLC). A programmable digital display makes it easy to view current pressure; high repeatability and a keypad let you be precise in your settings. Use with air and inert gases. Switches have ⅜″ high digits and 78″ wire leads. Max. pressure is 215 psi. All switches have silicone, nickel-plated brass, and nitrile wetted parts. *For ¼″ tube OD* switches also have acetal, polybutylene terephthalate, and Type 304 stainless steel wetted parts.

In general, choose the switch output (NPN or PNP) that is the opposite type of your PLC input. For example, if your PLC has a PNP input, choose an NPN pressure switch. For more information about NPN and PNP switches, see page 896.

Optional panel-mount bracket requires a 1⁷⁄₃₂″×1⁷⁄₃₂″ cutout.

Connection Type	Switch Output	Actuation Range, psi	Deactuation Range, psi		
⅛″ NPT Male	NPN	0-145	1-145	**3167K13**	$119.74
⅛″ NPT Male	PNP	0-145	1-145	**3167K14**	119.74
For ¼″ Tube OD	NPN	0-145	1-145	**3167K15**	119.74
For ¼″ Tube OD	PNP	0-145	1-145	**3167K16**	119.74
Optional Panel-Mount Bracket				**3167K91**	4.09

Vacuum and Pressure Switches with On/Off Indicator

- Repeatability: ±1% of actuation range
- Pressure Sensing Element: Brass Bourdon tube
- Pressure Connection: Brass NPT male
- Case Material: Steel
- Electrical Switch: SPDT, 10 amps at 120/240 VAC
- Temp. Ranges: Ambient: 32° to 180° F Process: 32° to 180° F

Like a pressure gauge, these switches have a Bourdon pressure tube and a clear, polycarbonate lens with a graduated scale so you can clearly see set points and the on/off indicator. Use with compressed air, water, and hydraulic oil. All switches have a NEMA 1 enclosure (indoor use only), screw terminals, and a ½″ hole for a conduit hub. Wetted parts are brass. UL listed and CSA certified.

Actuation Range	Deactuation Range	Maximum Pressure, psi	Pipe Size

Extended-Life Pressure Switches

- Repeatability: ±2% of actuation range
- Pressure Sensing Element: Type 416 stainless steel piston with Buna-N O-ring
- Pressure Connection: Type 416 stainless steel NPT female
- Case Material: Aluminum
- Electrical Switch: SPDT, 10 amps at 125/250/480 VAC
- Temp. Ranges: Ambient: –40° to +165° F Process: –40° to +165° F

A sealed piston design and a durable, anodized-aluminum NEMA 13 enclosure (dust/oil resistant) protect these switches in the nastiest of environments giving them long life. They handle rapid cycling at high pressures in hydraulic presses, compactors, and machine tools. Use with compressed air, water, and hydraulic oil. They have a ½″ NPT female conduit connection and a scale on the face of the unit for easy actuation-point adjustments. Wetted parts are Type 416 stainless steel and Buna-N.

Actuation Range, psi	Deactuation Range, psi	Maximum Pressure, psi	Pipe Size		
20- 200	5- 20	3,000	¼″	**4735K43**	$331.02

425-6,000	120-360	12,000	¼″	**4735K49**	322.59

For information about pressure switches, see page 583. For information about electrical switches, see page 855.

Dual-Actuation Pressure Switches

- Repeatability: See table
- Pressure Sensing Element: Type 17-7 PH stainless steel piston with Buna-N O-ring
- Pressure Connection: Zinc-chromate steel 1⁄8″ NPT female
- Case Material: Steel with zinc-chromate finish
- Electrical Switch: SPDT, 5 amps at 250 VAC/28 VDC
- Temperature Ranges: Ambient: –65° to +225° F Process: –65° to +225° F

Two built-in switches, each controlling its own electrical circuit, allow you to set two actuation points from a single pressure port. Use with compressed air, water, and hydraulic oil. All switches are housed in a NEMA 1 enclosure (indoor use only) and have 12″ wire leads on each end. Wetted parts are steel, Type 17-7 PH stainless steel, and Buna-N. UL recognized and CE approved.

Actuation Range, psi	Deactuation Range, psi	Repeat-ability, psi	Maximum Pressure, psi		
1- 30	0.7- 2.3	±0.7	30	80015K11	$122.20
3-125	1.3- 3.8	±2	125	80015K12	122.20
8-250	2 -10	±5	250	80015K13	122.20

Ultra-Low-Pressure Switches

- Repeatability: ±0.5% of actuation range
- Pressure Sensing Element: Type 304 stainless steel diaphragm
- Pressure Connection: Type 17-7 PH stainless steel NPT female
- Case Material: Aluminum
- Electrical Switch: SPDT, 10 amps at 125/250 VAC
- Temp. Ranges: Ambient: –65° to +165° F Process: –65° to +165° F

A sensitive stainless steel diaphragm actuates these switches at very low pressure points. Use with compressed air, water, and hydraulic oil. They have a NEMA 4 enclosure (indoor/outdoor use) and 1⁄2″ NPS female conduit with 18″ wire leads. Wetted parts are Types 304 and 17-7 PH stainless steel. ***Dual Actuation Point—*** Two built-in switches, each controlling its own electrical circuit, allow you to set two actuation points from one pressure port.

Actuation Range, psi	Deactuation Range, psi	Maximum Pressure, psi	Pipe Size		
Single Actuation Point					
0.018- 1.7	0.02-0.05	3	1⁄4″	5004K51	$174.54

Dual Actuation Point					
0.4 -18	0.12-0.26	60	1⁄4″	5004K63	204.63

Vibration-Resistant Vacuum and Pressure Switches

- Repeatability: ±1% of actuation range
- Pressure Sensing Element: Buna-N diaphragm and O-ring
- Pressure Connection: Aluminum NPT male
- Case Material: Polycarbonate
- Electrical Switch: SPDT, 15 amps at 125/250/480 VAC
- Temp. Ranges: Ambient: 0° to 160° F Process: –10° to +200° F

Tested to withstand high vibrations. Use with compressed air and hydraulic oil. All have a NEMA 1 enclosure (indoor use only) with screw terminals and a 7⁄8″ conduit hole. Wetted parts are aluminum and Buna-N. UL listed and CE approved.

Actuation Range	Deactuation Range	Maximum Pressure, psi	Pipe Size		
Vacuum Switch					
30″ Hg to 0	3.5″ to 1″ Hg	0	1⁄4″	4779K11	$106.29
Pressure Switches

30-300 psi	1.3-4 psi	300	1⁄4″	4779K24	106.29

Differential-Pressure Switches

- Repeatability: ±1% of actuation range
- Pressure Sensing Element: Buna-N diaphragm
- Pressure Connection: Brass NPT female
- Case Material: Polyester with 300 series stainless steel cover
- Electrical Switch: SPDT, 5 amps at 125/250 VAC
- Temp. Ranges: Ambient: +30° to +160° F Process: –10° to +200° F

Detect the difference in pressure between two process lines—these switches have two pressure connections and actuate when the differential exceeds your actuation point. Ideal for identifying clogged filters. Use with compressed air, water, and hydraulic oil. Max. pressure is 150 psi. All switches have screw terminals with a 7⁄8″ conduit hole. Wetted parts are brass and Buna-N. UL listed, C-UL listed, and CE approved. Choose a switch with a NEMA 1 (indoor use only) or a NEMA 4 (indoor/outdoor use) enclosure.

Actuation Range, psid	Deactuation Point, psid	Pipe Size	*NEMA 1*		*NEMA 4*	
1-10	0.75	1⁄4″	46845K71	$99.74	46845K81	$124.57
4-45	1	1⁄4″	46845K72	99.74	46845K82	124.57

Low Differential-Pressure Switches

- Repeatability: ±3% of actuation range
- Pressure Sensing Element: Silicone rubber diaphragm
- Pressure Connection: Zinc-plated aluminum NPT female
- Case Material: Zinc-plated brass
- Electrical Switch: SPDT, 15 amps at 120/240/480 VAC
- Temperature Ranges: Ambient: –30° to +180° F Process: –30° to +180° F

Switches actuate under very low differential pressures. They're ideal for HVAC applications, ovens, and dryers. Use with air and other noncorrosive, noncombustible gases. Maximum pressure is 45″ H_2O. Connect with screw terminals. All have a 7⁄8″ conduit hole. UL listed, CSA certified, FM approved, and CE approved.

Actuation Range, inches of H_2O	Deactuation Point, inches of H_2O	Pipe Size		
0.07″- 0.15″	0.04″	1⁄8″	40915K54	$49.11

Dial-Indicating Differential-Pressure Switches

- Repeatability: ±2% of actuation range
- Pressure Sensing Element: Brass piston
- Pressure Connection: Brass NPT female
- Case Material: Brass
- Electrical Switch: SPDT, 0.25 amps at 120 VAC
- Temperature Ranges: Ambient: –4° to +176° F Process: –4° to +176° F

An easy-to-read 2½″ dial shows you the pressure differential across your process lines, making these switches a convenient choice to monitor your process. Use with compressed air, water, and hydraulic oil. All switches are housed in a NEMA 4X enclosure (washdown/corrosion resistant) with a glass lens. Switches have screw terminals with a 1⁄2″ NPT female conduit connection. Wetted parts are brass, Type 302 stainless steel, ceramic, PTFE, and Buna-N. Gauge accuracy is ±2% of the range. CSA certified.

Actuation Range, psid	Deactuation Point, psid	Maximum Pressure, psi	Pipe Size		
3-15	3	5,000	1⁄4″	40945K81	$316.95
6-30	6	5,000	1⁄4″	40945K82	316.95
10-50	10	5,000	1⁄4″	40945K83	316.95

Multi-Speed Pressure Chart Recorder

Select one of four recording speeds (6 hours, 24 hours, 7 days, or 31 days), three pressure ranges (0-50 psi, 0-150 psi, or 0-500 psi), and two chart rotations (single turn and continuous) to handle all of your pressure-recording needs. Use with compressed air, water, and hydraulic oil. It has a three-digit, 1⁄2″ LED display; 6″ chart diameter; and can be used freestanding or wall mounted with the included keyhole slots for 1⁄2″ dia. screw. Measures 9 1⁄4″ Ht. × 7 1⁄4″ Wd. × 2 3⁄4″ Dp.

Accuracy is ±1% full scale; response time is 1 second. Pressure connection is Type 17-4 PH stainless steel 1⁄4″ NPT male with 6-ft. cable for optional remote pressure monitoring. Case and lens material is polycarbonate. Ambient and process temperature ranges are 32° to 140° F. Recorder operates on 120 VAC, 50/60 Hz and has a battery backup (eight AA batteries required; not included). Furnished with two black recorder pens and one package (60/pkg.) of charts.

Chart Recorder	3446K66	Each	$595.73	Replacement Charts (60/Pkg.)	3446K49	Pkg.	$25.68
Replacement Black Recorder Pen	3446K53	Each	$12.66	AA Alkaline Batteries (4/Pkg.)	71455K53	Pkg.	$2.94

Pressure Chart Recorders

Continuously measure and document critical gas and liquid pressures for troubleshooting system problems as well as recording important process parameters. Furnished with one AA battery and one red recorder pen. All have ±2% full-scale accuracy and a brass NPT male pressure connection. Ambient and process temperature ranges are –22° to +122°F. Charts are not included (sold separately below). All have NEMA 4X enclosures for washdown and corrosion resistance.

4″ Chart Diameter

Recorders with a ***4″ chart diameter*** have a switch to select 24-hour or 7-day recording speed. They have one 3/16″ diameter hole for wall mounting. Response time is 1 sec. Case material is polybutylene terephthalate (PBT). Dimensions are 6¼″ Ht.×6″ Wd.×2⅞″ Dp. Recorders with an ***8″ chart diameter*** have two ⅜″ dia. keyhole slots for wall mounting. Response time is 5 sec. Case material is plastic. Dimensions are 10 5/16″ Ht.×9½″ Wd.×3 19/32″ Dp., unless noted.

To Order: For 8″ chart diameter recorders and all charts, please specify recording speed: 24 hour or 7 day, unless noted.

Pressure Range, psi	Pipe Size	Recorders	Each	Charts (60/Pkg.)	Pkg.
4″ Chart Diameter					
0- 100	¼″	**4069K75**	$486.42	**4069K11**	$37.92

Replacement Red Recorder Pen				**4069K98** Each	$9.32

▲ Not available in 7-day recording speed. ♣ Recorder with a 24-hour recording speed measures 9½″ Ht.×9½″ Wd.×4⅛″ Dp.

Washdown Pressure Data Loggers with Digital Display

This combination data logger and pressure display is great for local pressure monitoring as well as for storing measurements to download to a computer. Easily transfer data to your PC using the high-speed USB 2.0 connection or a portable flash memory card. Memory capacity is 64,000 data samples. Use with compressed air and water. Housed in an IP68 (protection against prolonged water submersion) enclosure. Has an LCD with 9/32″ high digits. Powered by one DL123 lithium battery (included).

Sampling interval is 1 sec. to 24 hours; response time is 45 seconds. All have a Type 316 stainless steel pressure sensor, a Type 316 stainless steel NPT male pressure connection, and a glass-filled ABS plastic case and lens. Dimensions are 3⅜″ Dia.×2 13/16″ Ht. Ambient and process temperature ranges are –22° to +176°F.

Software program is compatible with Windows 98 or better. PC requirements are a 386 or higher microprocessor, 16 MB RAM, a USB 2.0 port, and CD-ROM drive. It can be used with more than one logger. Cable is 6 ft. long.

Pressure Range	Accuracy, Full Scale	Resolution, psi	Pipe Size		
0-100 psi	±1%	0.1	¼″	**3053K21**	$540.58

Software Program and Download Cable				**3053K91**	99.74

Easy-Grip Pressure Testers

Use these pumps to generate test pressures. All testers have a vernier adjustment for pressure control.

Models ***with gauge*** are accurate to ±0.5%. They can also be used as calibrators.

Tester with a ***T-style handle*** also has an NPT female connection and a bleed valve for pressure venting. Wetted parts are acetal, stainless steel, and Buna-N.

Testers with a ***scissor-grip*** or a ***pistol-grip handle*** have a shutoff valve, 24″ long hose, and (where applicable) ¼″ swivel fitting for the reference gauge. Wetted parts for *compressed air* models are aluminum, brass, stainless steel, nylon, and Buna-N. *Hydraulic* models have a test-fluid reservoir and wetted parts of aluminum, brass, stainless steel, polycarbonate, and Buna-N.

With T-Style Handle

With Gauge and Pistol-Grip Handle

Application	Max. Gauge Pressure	Max. Pump Pressure	Pipe Size

Precision Pressure Testers

These precise testers use deadweights (nonmagnetic cast alloy or aluminum) and a hydraulic, single-screw piston pump to create a consistent, true pressure accurate to ±0.1%. They come furnished with a certificate of calibration traceable to the National Institute of Standards and Technology (NIST). They also include a test manifold, one or two piston and cylinder assemblies, a ratchet handle, O-ring, testing oil, and a carrying case. Pressure connections are ¼″ and ½″ NPT female. Wetted parts are aluminum, brass, stainless steel, Buna-N, and PTFE. The minimum weight increment (see table) is the smallest increment for producing and adjusting pressure.

Single-range testers have one piston and cylinder assembly to produce a specific pressure range. ***Dual-range*** have two interchangeable assemblies; each produces a different specified pressure range.

Pressure Range, psi	Min. Weight Increment, psi	No. of Weights		
Single Range				
10- 200	0.1	18	**4055K31**	$3,142.00
10- 400	0.1	20	**4055K32**	3,251.07
10- 600	0.1	22	**4055K33**	3,773.07
50-3,000	0.5	22	**4055K36**	3,968.96
Dual Range

10-600, 50-3,000	0.1 and 0.5	22	**4055K39**	4,328.46
Replacement O-Ring Kit			**4055K54**	40.96

Pressure-Recording Film Sheets

Get an instant, permanent "topographical" image of pressure variation. Simply place one of these sheets between any two contacting surfaces and apply pressure. Use to measure pressing forces in bolted joints, welding fixtures, and jigs.

Low pressure sheet produces a gray-scale image of the pressure distribution, but does not measure magnitude. Sheets cannot be cut. Not rated for accuracy and resolution. Temp. range is 0° to 150°F.

Standard sheets produce a colored image of the pressure distribution; compare to the color chart (sold separately) to determine magnitude. Sheets can be cut. Accuracy is ±10%; resolution is 5-15 microns. Temp. range is 41° to 95°F.

Sample pack includes a color chart and one 3″×4″ piece of film for each of the five pressure ranges.

About Dial Thermometers and Thermowells

Dial thermometers are the most common style of temperature gauge used in pipelines and tanks. They provide highly accurate measurements and have an easy-to-read dial. These thermometers are durable and work in a variety of applications. When choosing your stem length, please note that stem lengths listed include the threaded male connection.

Remote-reading dial thermometers have a dial and sensor that are connected by a flexible cable, so you can mount the dial away from the sensor, for temperature monitoring at a distance or in panel installations. They provide greater resistance to vibration and shock, reducing needle flutter for easier temperature readings. These thermometers are often used in refrigeration applications.

Why Use a Thermowell?

Thermowells (see page 590) are commonly used with threaded dial thermometers. They provide a protective barrier between the thermometer and application contents to minimize vibration, shock, pressure, and corrosion. Thermowells also allow you to replace your thermometer without draining your tank.

Dial Thermometers

Back Connection

Bottom Connection

Adjustable Angle

Incorporate an easy-to-read dial thermometer into your application for quick temperature readings. Thermometers are made of Type 304 stainless steel. They have an airtight dial case to eliminate fogging and an external calibration adjustment screw. Stem dia. is ¼″. Accuracy is ±1% of full scale. Choose from thermometers with ½″ NPT male and ½″ BSPT (British Standard Pipe Taper) male connections.

To Order: Please specify temperature range from the listing below.

Dry thermometers have a glass lens. ***Silicone-filled thermometers*** reduce needle flutter due to vibration. They have an acrylic lens.

Back-connection thermometers with NIST certificate come with a certificate of calibration traceable to NIST (National Institute of Standards and Technology). *Adjustable-angle thermometers* have a dial case that pivots 90° from parallel to perpendicular to the stem and the thermometer rotates 360° to obtain the best viewing angle. Included set screws secure the desired angle.

For information about dial thermometers and thermowells, see page 588.

Dial Thermometers with Corrosion-Resistant Stem

A stainless steel stem gives these thermometers superior corrosion resistance. Choose from a Type 316 stainless steel stem and a PFA-coated Type 304 stainless steel stem for additional chemical resistance. Thermometers have a glass lens, an airtight dial case to eliminate fogging, and an external calibration adjustment screw. Stem diameter is 1/4". Accuracy is ±1% of full scale. Thermometers have a 1/2" NPT male back connection.

To Order: Please specify temperature range from the listing.

Side-Connection Dial Thermometers

Great for use in tight areas, these thermometers mount with a side-connection but face upright for easy viewing. Thermometers are Type 304 stainless steel. They have a glass lens, an airtight dial case to prevent fogging, and an external calibration adjustment screw. Dial size is 3". Stem diameter is 1/4". Accuracy is ±1% of full scale. Connection is 1/2" NPT male.

Left-Side Connection

To Order: Please specify temperature range from the listing.

Heavy Duty Dial Thermometers with Thermowell

Equipped with a thermowell, these sturdy thermometers hold up against vibration, shock, pressure, and corrosive liquids. They have a back connection with dual 1/2" and 3/4" NPT male threads to fit most connections.

Thermometers are made of Type 304 stainless steel. They have an acrylic lens, an airtight dial case to eliminate fogging, and an external calibration adjustment screw. Dial size is 3". Accuracy is ±1% of full scale. With the thermowell, thermometers have a maximum pressure of 1,200 psi at 70° F.

To Order: Please specify temperature range from the listing.

Long-Reach Dial Thermometers

With an extra-long pointed stem, these thermometers extend into hard-to-reach areas with ease. They are often used in composting, waste management, and meat processing. Thermometers are made of Type 304 stainless steel. They have an acrylic lens, an airtight dial case to eliminate fogging, and an external calibration adjustment screw. Dial size is 3". Accuracy is ±1% of full scale. Thermometers have a 1/2" NPT male back connection.

***With Gripping Handle*—**Thermometers have a removable aluminum handle that threads onto the 1/2" NPT male connection. Dial has a dual temperature range of 0° to +200° F/–15° to +90° C with graduations of 2° F/1° C.

***Without Handle*—**Dial has a temperature range of 0° to +200° F with graduations of 2° F.

For information about dial thermometers and thermowells, see page 588.

Shock-Resistant Dial Thermometers

Get clear temperature readings in your high-shock environment with these dial thermometers. They reduce needle flutter caused by vibration, shock, and pressure surges. Dial case pivots 180° and swivels 180° to obtain the best viewing angle. Included set screw secures the desired angle. Dial case is Type 304 stainless steel and has a polycarbonate lens. Thermometers have a 7/16″ diameter copper stem. Accuracy is ±1% of full scale. Thermometers have a 1/2″ NPT male bottom connection. *Optional brass thermowell* has a 1/2″ NPT male connection.

Temp. Range	Grads.	Stem Lg.	3 1/2″ Dial Size		4 1/2″ Dial Size

Optional Brass Thermowell			3960K3	$35.61		

Thermowells

Quick Response

Use a thermowell in your tank to protect your thermometer from vibration, shock, pressure, and corrosive liquids. They also enable you to exchange thermometers without disturbing or draining the system. Thermowells have an external NPT male connection for installation in your tank or vessel and are for use with dial thermometers with a 1/2″ NPT male connection.

Brass thermowells have a maximum temperature of 400° F. Maximum pressure is 5,000 psi at 70° F. *Type 304 stainless steel* and *Type 316 stainless steel* thermowells have a maximum temperature of 1650° F. Maximum pressure is 7,000 psi at 70° F. Type 304 stainless steel has good corrosion resistance. Type 316 stainless steel has excellent corrosion resistance.

Quick-response thermowells have thinner walls that allow for faster heat transfer and quicker temperature readings. ***Thermowells for insulated tanks*** have an extra-long nut to accommodate insulated tank walls. ***Heavy duty thermowells*** have thicker walls and a tapered shank to withstand high-pressure and high-flow applications.

Thermowells with Sanitary Quick-Clamp Connection

Now you can use your standard dial thermometer in a sanitary application with one of these thermowells. Safe for use in food, beverage, pharmaceutical, and similar applications, these thermowells meet 3-A sanitary standard requirements and have a sanitary quick clamp connection. For sanitary quick-clamp fittings, see pages 208-210. Thermowells accept dial thermometers with a 1/2″ NPT male connection and 1/4″ stem diameter. They are made of Type 316L stainless steel that's polished to a 16-20 Ra finish. The pressure and temperature ratings vary based on the sanitary clamp and gasket used.

For information about dial thermometers, see page 588.

Compact Light Duty Dial Thermometers

Don't struggle with a standard connection that's too big—these thermometers have a 1/4″ NPT male back connection that's perfect for smaller locations. Thermometers are made of Type 304 stainless steel. They have a glass lens and an airtight dial case to eliminate fogging. Stem diameter is 1/4″. Accuracy is ±1% of full scale.

To Order: Please specify temperature range from the listing below.

Available Temperature Ranges

Temp. Range	Grads.	Temp. Range	Grads.

Panel-Mount Dial Thermometers

The back flange on these thermometers makes them ideal for mounting on instrument or control panels. Flange is made of Type 304 stainless steel and has three mounting holes.

Dial case is Type 430 stainless steel and is sealed with a silicone gasket for water resistance. The 1/4″ diameter stem is Type 304 stainless steel. Thermometers have a glass lens. Dial size is 2″. Thermometers have an unthreaded back connection.

Clip-On Dial Thermometers

Attach these thermometers to the rims of tanks, trays, vats, and other containers. The clip accommodates wall thicknesses from 1/2″ to 3/4″. Thermometer and clip are made of Type 304 stainless steel. They have an airtight dial case to eliminate fogging and an external calibration adjustment screw. Stem diameter is 3/16″. Accuracy is ±1% of full scale. Thermometers have an unthreaded back connection.

1 3/4″ dial size thermometers with a maximum temperature of 300° F/110° C have a polycarbonate lens; those with a maximum temperature higher than 300° F have a glass lens. ***2″ dial size*** thermometers have a glass lens. ***3″ dial size*** thermometers have a polycarbonate lens.

To Order: Please specify temperature range from the listing below.

Dial Thermometers for Food Processing

Sanitary Quick Clamp

Nonglass lenses make these thermometers especially suitable for use in food-processing environments. Thermometers are made of Type 304 stainless steel. They have a back connection and an airtight dial case to eliminate fogging.

1/2″ NPT male connection thermometers have an external calibration adjustment screw. Stem diameter is 1/4″. Accuracy is ±1% of full scale. *3″ dial size* have a polycarbonate lens; *5″ dial size* have an acrylic lens.

Sanitary quick-clamp connection thermometers have a sanitary fitting and meet 3-A sanitary standard requirements. For sanitary quick-clamp fittings, see pages 208-210. Thermometers have an acrylic lens. Stem diameter is 5/16″. Accuracy is within one graduation.

To Order: Please specify temperature range from the listing below.

Pocket Glow-in-the-Dark Dial Thermometers

Don't strain your eyes in low light. A luminescent dial face gives clear temperature readings in all lighting conditions. Thermometers are made of Type 304 stainless steel. They have a polycarbonate lens and an external calibration adjustment screw. Stem is 1/8″ Dia. × 5″ Lg. Accuracy is ±1% of full scale. Thermometers have an unthreaded back connection. They come with a protective plastic sleeve.

Remote-Reading Dial Thermometers

With greater shock and vibration resistance than standard dial thermometers, these remote-reading dial thermometers are ideal for refrigeration applications. A cable connects the dial and the stem so you can mount the dial away from your system. Dial case is made of 300 series stainless steel and has a polycarbonate lens. Cable and 7/16″ diameter stem are copper. Accuracy is ±1% of full scale. Connection is 1/2″ NPT male. *Note:* To ensure accuracy, the dial must be mounted no more than 5 feet above or below the stem.

Back flange and ***front flange*** mount thermometers have three mounting holes. Front flange thermometers with a 3 1/2″ dial size require a 3 5/8″ panel cutout; 4 1/2″ dial size require a 4 5/8″ panel cutout.

Bracket mount thermometers have an adjustable bracket that allows the dial to pivot 90° front to back. Bracket has two mounting holes spaced 1 1/2″ center-to-center.

Optional brass thermowell with 1/2″ NPT male connection is sold separately below.

To Order: Please specify temperature range from the listing below.

High-Temperature Remote-Reading Dial Thermometers with Thermowell

Measure high temperatures while keeping yourself out of the heat. This remote-reading thermometer tolerates high temperatures and includes a protective thermowell. Thermometer dial and stem are connected by an armored cable, allowing the dial to be mounted away from your system. Dial case is enamel-coated aluminum and has a back flange mount with three mounting holes. The lens is glass. Cable is Type 302 stainless steel and stem is Type 304 stainless steel. Stem diameter is 5/8″. Accuracy is ±1% of full scale.

A thermowell with a 3/4″ NPT male connection is included. Thermowell is brass with a maximum psi of 5,200 at 70° F, except for temperature ranges of 0° to 500° F and 50° to 750° F, for which the thermowell is Type 304 stainless steel with a maximum psi of 7,000 at 70° F.

To Order: Please specify temperature range from the listing below.

NSF-Certified Remote-Reading Dial Thermometers with Unthreaded Stem

Ideal for use in food-processing and preparation areas, these NSF-certified thermometers are also more resistant to shock and vibration than standard dial thermometers. With an unthreaded stem, they're ready for use—simply drop the stem into your system. Thermometer dial and stem are connected by a thin cable, allowing the dial to be mounted away from your system. Dial case is 300 series stainless steel with an acrylic lens. Cable and stem are tin-plated copper. Stem diameter is 3/8″. Accuracy is ±1% of full scale. Flange has three mounting holes.

Front flange mount thermometers with a 2″ dial size require a 2 1/16″ panel cutout; 2 1/2″ dial size require a 2 9/16″ panel cutout; and 4 1/2″ dial size require a 4 5/8″ panel cutout.

Floating Dial Thermometers

Stay on top of changing temperatures—a removable Santoprene rubber float keeps these thermometers on the surface of liquid-filled containers. Thermometers are Type 304 stainless steel with a polycarbonate lens. They have an airtight dial case to eliminate fogging and an external calibration adjustment screw. Dial size is 1 3/4″. Stem diameter is 1/8″. Accuracy is ±1% of full scale. Thermometers have an unthreaded back connection.

Stem Lg.	Temp. Range	Grads.

8″	0° to 220° F	2° F	3992K24	30.05

For information about dial thermometers, see page 588.

Magnetic-Back Dial Surface Thermometers

Don't guess the temperature of your metallic surfaces—these thermometers can measure the temperature of dies, annealing ovens, welded materials, and generators. All dial cases are made of aluminum. Accuracy is ±2% of full scale.

A&B—Lens is glass. Dial is 2″ Dia.×½″ Ht. *Style B* have min./max. indicating needles. Needles are reset with a magnetic wand (included).

C—Lens is polycarbonate. Dial is 2⅛″ Dia.×15/16″ Ht. and is fully enclosed for extra durability.

D—These are perfect for monitoring the temperature of gas tanks. Lens is polycarbonate. Dial diameter is 1¾″. Overall size is 4¼″ Lg.×2¼″ Wd.×9/16″ Thick.

Glass Thermometers

No longer filled with mercury, glass thermometers are quick, safe, and handy tools for on-the-go temperature readings. All thermometers are filled with spirits (isoamyl benzoate). Thermometers are 12″ long, unless noted.

Partial-immersion thermometers are great for shallow areas where total immersion is not possible. Partial-immersion depth is 3″.

Style F thermometers are FEP coated to absorb shock and contain glass and liquid in case of breakage. ***Style G*** thermometers are armored with a protective nickel-plated brass housing to prevent damage from being dropped and bumped.

90° Angle Stem

Straight Stem

Protected from shock, pressure, corrosion, and breakage, these glass thermometers have a detachable brass thermowell and fixed-angle ABS plastic housing with glass viewing window. With a 5″ scale height, they are also good for low-clearance areas.

Thermometers are filled with mercury-free blue spirits (kerosene). Scale shows °F/°C. The stem is brass and is 2¾″ long. Included thermowell has dual ½″ and ¾″ NPT male threads to fit most connections.

To Order: Please specify temperature range from the listing below.

Available Temperatures Ranges

Temp. Range	Grads.
–40° to +110° F/–40° to +40° C	2° F/2° C
+20° to +180° F/ –6° to +80° C	2° F/1° C
+30° to +240° F/ 0° to +114° C	2° F/2° C
+50° to +400° F/+10° to +204° C	5° F/2° C

Stem Style		
Straight	7671K41	$43.33
90° Angle	7671K43	43.33

Adjustable-Angle Solar-Powered Digital Thermometers

Without Thermowell

Connection with Brass Thermowell

Operating on indoor light, there are no batteries to replace on these digital thermometers. Case pivots 180° and swivels 180° to obtain the best viewing angle. Included set screw secures the desired angle. Housing is ABS plastic. Thermometers are °F/°C selectable with a temperature range of –50° to +300° F/ –45° to +150° C. Readings update every 10 seconds. Resolution is 1° F/1° C. Accuracy is ±1% of full scale.

Thermometers without thermowell have a 1¼″-18 swivel union connection.

Thermometers with brass thermowell have a ¾″ NPT male connection on the thermowell.

Stem Lg.	Without Thermowell		With Brass Thermowell	
3½″	8020K21	$63.05	8020K11	$74.14
6″	8020K22	74.75	8020K12	89.72

Adjustable-Angle Glass Thermometers

Aluminum-Housed Without Thermowell

Great for heating, ventilating, and air conditioning applications, these thermometers pivot 180° and swivel 180° to obtain the best viewing angle. They are mercury-free. Scale shows °F/°C.

Aluminum-Housed Blue-Fill Thermometers

Thermometers are filled with blue spirits (kerosene). They have an acrylic viewing window. Stem is zinc.

To Order: Please specify temperature range from the listing below.

Thermometers without thermowell come with a fitting to convert the straight threads to a ¾″ NPT male connection.

Thermometers with thermowell are protected from shock and pressure in your tank or pipeline. Connection is ¾″ NPT male.

Available Temperature Ranges

Temp. Range	Grads.
–40° to +110° F	2° F
0° to +160° F	2° F
+20° to +180° F	2° F
+30° to +240° F	2° F

Pocket Digital Thermometers

Keep one of these digital thermometers in your pocket for temperature readings on the go. Stem is 300 series stainless steel (unless noted) and approximately 1/8″ in diameter.

Thermometers are °F/°C selectable (unless noted) and have 0.1° resolution. All come with a protective plastic sleeve. Batteries are included, unless noted. *Note:* Resolutions and accuracies are at the middle of temperature ranges and may be less accurate at range limits.

Thermometers *with NIST certificate* include a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

▲Scale is in °F only. ●Accuracy for air is ±1°F; for surface is ±0.2°F. ★Tip is nickel-plated steel.

Top-Reading Pocket Digital Thermometers

Especially convenient for checking temperatures of liquids in open containers, these top-reading digital thermometers are a useful everyday tool. Thermometer stems are 300 series stainless steel and approximately 1/8″ in diameter. They are °F/°C selectable and have 0.1° resolution, unless noted. All are furnished with a protective plastic sleeve and batteries. *Note:* Resolutions and accuracies are at the middle of temperature ranges and may be less accurate at range limits.

♠Thermometers have 1° resolution.

Palm-Grip Infrared Thermometers

Quickly scan and measure surface temperatures without making contact. All thermometers have a thermoplastic housing and an LCD. They are °F/°C selectable, shut off automatically, and have a response time equal to or less than one second. CE approved. Batteries are included.

Note: Accuracies listed in the table below are at the middle of the temperature range and may be lower at range limits.

Styles K&P—Come with a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

Style N—Meets UL standards for use in the food industry.

Style Q—Meets IP67 for protection against water submersion.

♦ Not CE approved.

Thermal Imaging Guns

Detect hot spots or moisture problems in your system before they cause an outage. These thermal imaging guns reveal hot spots on bearings, in HVAC systems, and in instrument panels, which may signal electrical problems or safety concerns. Imaging guns come with a memory card, recording software, and a USB cable. Data and images can be uploaded to your PC. All have a rechargeable battery and a charger/adapter. °F/°C selectable. Accuracy is ±2% of full scale. CE approved.

4006K5 has a thermoplastic housing and a 2.8″ color LCD.

4006K8 has a plastic housing, a 3.5″ color LCD, a built-in laser, visual and thermal image overlay capabilities, and comes with a carrying case.

Temp. Range	O'all Size, Ht. × Wd. × Dp.		
32° to 482° F	8 13/16″ × 3⅛″ × 3 5/16″	**4006K5**	$1,572.54

Penlight Infrared Thermometer

Bring the convenience of quick, noncontact temperature measurement wherever you go with this pocket-sized infrared thermometer. Includes a bright white LED light for dimly lit areas. It has a chrome-coated brass housing and a digital display. Two LR44 coin cell batteries for the thermometer and one AAA battery for the LED are included. Thermometer is °F/°C selectable and has a response time of one second. Accuracy is ±2.5% at the middle of the temperature range and may be lower at range limits. Maximum working distance is 12 feet. Thermometer is 6″ Ht. × ½″ Dia. and comes with a case.

Temp. Range		
–27° to +428° F	**4231K24**	$51.02

About Thermocouple and RTD Temperature Sensors

Choosing a Sensor for a New System

Both thermocouples and RTDs (resistance temperature detectors) measure a wide variety of temperature ranges and are accurate, durable, and easy to replace. Use this chart to choose the sensor that fits your application.

	Thermocouple	RTD
Max. Temperature	Extremely high; up to 2282° F	Moderate; up to 932° F
Accuracy	Moderate	High
Reliability Over Time	Decreases	Consistent
Vibration and Shock Resistance	High	Low
Cost	Low	Moderate

Replacing a Sensor in an Existing System

When replacing a sensor or other component, remember that thermocouples and RTDs are not interchangeable. Furthermore, types of thermocouples (J, K, and T) and RTDs (100 ohms and 1,000 ohms) are also not interchangeable. If you are replacing an RTD, the most common are 100 ohm.

Generally speaking, J and K are the most frequently used thermocouple types. Use this chart to identify your thermocouple by its wire colors.

Type	Wire Color
J	White and Red
K	Yellow and Red
T	Blue and Red

Adding System Accessories

Signal converters (also known as transmitters; see page 603), convert the input signal to a common 4-20 mA signal. With this signal, you can incorporate panel instruments, switches, controllers, and recorders within your system. Also use signal converters to amplify a signal for accurate long-range transmission.

Switches and controllers (see pages 604-606) turn your system "on" and "off" at specified temperatures. *Controllers* also have the capacity for customized programming to track and react based on your system's activity.

For information about thermocouples and RTDs, see page 596.

Thermocouple Thermometers

Get accurate and quick temperature readings with these thermocouple thermometers. All are CE approved. Batteries are included.

(A) With NIST Certificate— Comes with a certificate of calibration traceable to NIST (National Institute of Standards and Technology). Has min./max. memory. Accuracy is ±1.8° F. °F/°C selectable.

(B) With Built-In Data Logger— Has a data logger that measures up to 8,800 readings. Comes with two surface-contact probes, an RS-232 computer cable, and software. Has min./max. memory. °F/°C/Kelvin selectable. Accuracy is ±(0.05% of reading + 1.5° F).

(C) Waterproof— Have an IPX7 rating. Protected against water immersion for 30 minutes at a depth of 1 meter. Accuracy is ±0.9° F. °F/°C selectable. 38785K11 is also NSF certified.

ⓘ For a specification sheet with additional information such as probe dimensions, go to mcmaster.com and search for the part number.

		Temp. Range	Probe Style		
(A)	With NIST Certificate	–40° to +482° F	Air/Immersion	**9277T24**	$141.55
(B)	With Built-In Data Logger	–22° to +572° F	Surface Contact	**9281T44**	249.58
(C)	Waterproof	–100° to +500° F	Surface Contact	**38785K15**	264.66
(C)	Waterproof and NSF Certified	–100° to +500° F	Air/Immersion	**38785K11**	308.85

Fluke Thermocouple Thermometers

Known for their high accuracy, ±(0.05% of reading + 0.5° F), these thermometers provide reliable and precise temperature measurement. *Single-input* thermometers come with one surface-contact thermocouple probe; *dual-input* thermometers include two probes. All probes have a temperature range of –40° to +500° F. Thermometers are °F/°C/Kelvin selectable and have min./max. memory. CSA certified and CE approved. Batteries are included.

Thermometers *with logging mode* have data logging for up to 500 readings.

Single Input

ⓘ For a specification sheet with additional information such as probe dimensions, go to mcmaster.com and search for the part number.

	Fluke No.		
Single Input	51-2	**40255K31**	$238.59
Dual Input	52-2	**40255K32**	284.94
Single Input with Logging Mode	53-2B	**40255K33**	337.20
Dual Input with Logging Mode	54-2B	**40255K34**	388.48

Thermocouple Calibrators/Thermometers

Calibrate thermometers for eight different thermocouple types: J, K, T, E, C, R, S, and N. These units can also operate as thermometers using a thermocouple probe with a male flat-pin (mini) connector (not included, see pages 598-599).

Have a memory function that allows you to store up to five calibration values. All have a rechargeable battery and a 115 VAC adapter/charger. Accuracy is ±(0.15% of reading + 1.8° F). CE approved.

Calibrator/thermometer with NIST certificate comes with a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

ⓘ For a specification sheet with additional information such as probe dimensions, go to mcmaster.com and search for the part number.

Calibrator/Thermometer	**3835K81**	$366.93
Calibrator/Thermometer with NIST Certificate	**3835K92**	510.31

Magnetic-Back Thermocouple Thermometers

With a magnetic back that mounts to any flat metal surface, these thermocouple thermometers are great for hands-free operation. Come with an immersion probe. Accuracy is ±(0.25% of reading, ±1 digit). Batteries are included.

ⓘ For a specification sheet with additional information such as probe dimensions, go to mcmaster.com and search for the part number.

With Probe	Temp. Range		
Type J	–50° to +1200° F	**38855K72**	$115.78
Type K	–50° to +1000° F	**38855K74**	115.78
Type T	–100° to +700° F	**38855K76**	115.78

Wall/Panel-Mount Hazardous-Location Thermocouple Thermometers

Meet your safety or environmental needs with these rugged thermometers. They have a Type 302 stainless steel sealed NEMA 4X enclosure (for indoor/outdoor use; exposure to splashing liquids, corrosive agents, and dusty environments). Thermometers are also intrinsically safe for Classes I, II, and III, Division 1, Groups A, B, C, D, E, and G hazardous locations. FM approved.

Thermometers have a ¼ DIN (3 19/32″×3 19/32″) housing with a ½″ NPT female Type 303 stainless steel connection. They can be calibrated to within 1°. Include an LCD and a low-power indicator. Resolution is 1°. Accuracy is ±1% of full scale. Require eight AA batteries (not included; sold separately below). Choose from thermometers for Type J or K thermocouple probes (see pages 598-599 for thermocouple probes).

Wall/pipe-mount thermometers have an attached bracket with six mounting holes for #10 screws (not included). They also have a ½″ NPT female connection for mounting onto a pipe.

Panel-mount thermometers fit into a 3⅝″×3⅝″ panel cutout.

Wall/Pipe Mount

For Probe	Temp. Range	***Wall/Pipe Mount***		***Panel Mount***	
Type J	–50° to +450° F	**4128K15**	$348.09	**4128K16**	$348.09

AA Batteries (Pkg. of 4)		**71455K53**	**Pkg.**		$2.94

Panel-Mount Thermocouple/RTD Thermometers

Also known as panel meters, these compact, mountable thermometers provide accessible temperature readings. They have an LED display and a ⅛ DIN (3 25/32″×1 57/64″) housing. All are °F/°C selectable, except 4068K73, K58, K59, and K74, which are °F only. Resolution is 1° (unless noted). Operate on 115/230 VAC, 50/60 Hz. All have wire lead connections for thermocouple, RTD, and power supply units. Probes are not included; see pages 598-602 for probes.

For Probe	Temp. Range	Accuracy

▲Resolution is 0.1°.

NSF-Certified Panel-Mount RTD Thermometers

Suitable for the food industry, these water-tight thermometers are NSF certified. Thermometers have 8-ft. wire leads. They require a 2″ dia. panel cutout. Operate on 110 VAC.

ⓘ For a specification sheet with additional information such as probe dimensions, go to mcmaster.com and search for the part number.

Temp. Range	Accuracy		
–40° to +199° F	±2° F	**38675K11**	$99.75
0° to +250° F	±2° F	**38675K12**	99.75
–40° to +120° C	±2° C	**38675K13**	99.75

For information about thermocouples and RTDs, see page 596.

RTD Thermometers

These RTD thermometers provide accurate temperature readings for the life of the thermometer. °F/°C selectable, except 3263K32 which is °F only. Batteries are included. 9282T22 and 38655K18 are CE approved.

Styles A&B include a certificate of calibration traceable to NIST (National Institute of Standards and Technology).

Style C logs up to 2,000 temperature readings with time and date stamp.

For a specification sheet with additional information such as probe dimensions, go to mcmaster.com and search for the part number.

	Temp. Range	Accuracy	Probe Style		
(A) With NIST Certificate	–76° to +500° F	±1° F	Penetration/Immersion	3263K32	$254.93
(B) With NIST Certificate	–58° to +752° F	±2° F	Air/Immersion	9282T22	357.52
(C) With Logger	–58° to +932° F	±0.1° F	Penetration	38655K18	466.94

Air/Immersion Thermocouple Probes with Flat-Pin (Mini) Connector

All probes have a male flat-pin (mini) connector. *Note:* Response times listed below are approximate.

(1&2) Have perforated probe tips for measuring air temperatures. *Style 2* has a Type 304 stainless steel clip.

(3-6) Have bendable probes that adjust to the area being tested. Designed to measure air and liquid temperatures.

(7-9) Have bare tips for measuring air temperatures.

Probe Type (Temp. Range)	Probe Lg.	Response Time, sec.	Max. Cable Temp.		
(1) Type 304 SS Probes (1/8" dia.) with 4-ft. Coiled PVC Cable					
J (+32° to +500°F)	4"	10	176°F	3868K42	$63.89
K (–100° to +500°F)	4"	10	176°F	3868K43	63.89
(2) Type 304 SS Probes (1/4" dia.) with 46" Fiberglass Cable					
J (+32° to +896°F)	2⅛"	10	896°F	3868K641	63.89
K (+32° to +896°F)	2⅛"	10	896°F	3868K642	63.89
(3) Type 316 SS Probes (1/8" dia.) without Cable					
J (+32° to +1400°F)	12"	0.5	—	39095K61	19.33
J (+32° to +1400°F)	18"	0.5	—	39095K62	19.33
J (+32° to +1400°F)	24"	0.5	—	39095K63	22.44

T (+32° to +752°F)	⅛"	9	896°F	6441T944	36.11

Penetration/Immersion Thermocouple Probes with Flat-Pin (Mini) Connector

Measure the temperature of your soft materials and liquids with these thermocouple probes. All are made of Type 304 stainless steel (unless noted) and have a male flat-pin (mini) connector.

Note: Response times listed below are approximate.

(10-12&14)— Have a self-retracting coiled cable.

(16)— Have a blue PFA-coated stem.

Probe Type (Temp. Range)	Probe Lg.	Response Time, sec.	Max. Cable Temp.		
(10) Straight-Tip Probes (1/8" dia.) with 4-ft. Coiled PVC Cable					
J (+32° to +500°F)	4½"	4	176°F	39105K76	$63.89
K (–40° to +500°F)	4½"	4	176°F	39105K72	63.89
T (–40° to +500°F)	4½"	4	176°F	39105K91	63.89
(11) Reduced-Tip Probes (3/32" dia.) with 4-ft. Coiled PVC Cable					
J (+32° to +500°F)	6"	2	176°F	39105K651	73.16
K (–40° to +500°F)	6"	2	176°F	39105K652	73.16
(12) Reduced-Round-Tip Probes (1/16" dia.) with 4-ft. Coiled PVC Cable					
J (+32° to +932°F)	12"	1	176°F	39105K411	141.47
K (–40° to +932°F)	12"	1	176°F	39105K412	141.47
(13) Pointed-Tip Probes (1/4" dia.) with T-Handle and 5-ft. Type 304 SS Cable					
J (–310° to +1400°F)	11½"	10	900°F	39105K211♣	98.78
K (–418° to +1652°F)	11½"	10	900°F	39105K212♣	98.78
(14) Heavy Duty Pointed-Tip Probe (5/16" dia.) with T-Handle and 6-ft. Coiled Polyurethane Cable					
K (–166° to +400°F)	36"	15	220°F	9261T36	$250.62
(15) Chisel-Tip Probes (1/16" dia.) with 3-ft. PVC Cable					
J (+32° to +500°F)	4"	3	220°F	39105K511	118.32
K (–40° to +500°F)	4"	3	220°F	39105K512	118.32
(16) PFA-Coated Round-Tip Probes (1/8" dia.) w/32" Type 304 SS Cable					
J (–148° to +500°F)	12"	3	500°F	9260T51	145.80
K (–148° to +500°F)	12"	3	500°F	9260T53	145.80
(17) Hypodermic-Tip Probes (1/16" dia.) with 32" Type 304 SS Cable					
J (–325° to +600°F)	2"	0.25	550°F	9262T22	97.80
K (–325° to +600°F)	2"	0.25	550°F	9262T32	97.80
K (–325° to +600°F)	6"	0.25	550°F	9262T34	97.80
K (–325° to +1500°F)	2"	0.25	550°F	9262T62 ♦	97.80

♣ Probe is Type 316 stainless steel.

♦ Probe is Type 310 stainless steel.

For information about thermocouples and RTDs, see page 596.

Surface-Contact Thermocouple Probes with Flat-Pin (Mini) Connector

Flat-Pin (Mini) Connector

Designed for measuring surface temperatures, these probes are a useful addition to your thermocouple thermometer. All have a male flat-pin (mini) connector. *Note:* Response times listed below are approximate.

Styles 1-3—Straight, 60°, and 90° Probes

Probe Type (Temp. Range)	Probe Lg.	Response Time, sec.	Max. Cable Temp.		
(1) Type 304 SS Straight Probes (7/16″ dia.) with 4-ft. PVC Cable					
J (+32° to +1202°F)	4″	1	176°F	3861K36	$94.95
K (–40° to +1202°F)	4″	1	176°F	3861K37	94.95
T (–40° to +752°F)	4″	1	176°F	3861K311	94.95
(2) Type 304 SS 60° Probes (11/16″ dia.) with 4-ft. PVC Cable					
J (+32° to +500°F)	4½″	4	176°F	3861K631	91.68
K (–40° to +500°F)	4½″	4	176°F	3861K632	91.68
T (–40° to +500°F)	4½″	4	176°F	3861K633	91.68
(3) Type 304 SS 90° Probes (7/16″ dia.) with 4-ft. PVC Cable					
J (+32° to +1202°F)	5″	1	176°F	3861K321	104.53
K (–40° to +1202°F)	5″	1	176°F	3861K322	104.53

Style 4—Hook-and-Loop Probes

Probe Type (Temp. Range)	Strap Lg.	Response Time, sec.	Max. Cable Temp.		
(4) Nylon Probes (1″ wide strap) with 10-ft. PVC Cable					
J (–310° to +250°F)	8″	10	250°F	37045K191	$34.95
K (–418° to +250°F)	8″	10	250°F	37045K192	34.95

Style 5—Hose-Clamp Probes

Probe Type (Temp. Range)	Clamp Dia.	Response Time, sec.	Max. Cable Temp.		
(5) Type 301 SS Probes with 10-ft. Type 304 SS Cable					
J (+32° to +250°F)	11/16″-1¼″	5	900°F	37045K511	$25.39
J (+32° to +250°F)	13/16″-1½″	5	900°F	37045K521	28.44
J (+32° to +250°F)	1¼″-2¼″	5	900°F	37045K531	30.47
K (+32° to +250°F)	11/16″-1¼″	5	900°F	37045K512	25.39
K (+32° to +250°F)	13/16″-1½″	5	900°F	37045K522	28.44
K (+32° to +250°F)	1¼″-2¼″	5	900°F	37045K532	30.47

Styles 6 & 7—2″ Long Clip-On Probes

Probe Type (Temp. Range)	Jaw Size	Response Time, sec.	Max. Cable Temp.		
(6) Chrome-Plated Brass Probes with 5-ft. Coiled PVC Cable					
J (–310° to +250°F)	⅜″	5	250°F	6443T211	$30.51
K (–418° to +250°F)	⅜″	5	250°F	6443T212	30.51
(7) Chrome-Plated Brass Probes with 10-ft. Type 304 SS Cable					
J (–310° to +850°F)	⅜″	5	900°F	6443T811	42.72
K (–418° to +850°F)	⅜″	5	900°F	6443T812	42.72

Air/Immersion Thermocouple Probes with Bare Wire Leads

Get more versatility from your thermocouple thermometer with these probes. All are for measuring air or liquid temperatures, except Styles 8 and 9, which are for air and flat surface readings; Style 14, which is for surface-contact readings; Style 15, which is for air readings; and Style 16 which is for surface-contact and air readings. Cables can be cut to length, except Styles 15 and 16, which are adjustable and cannot be cut.

All have 20-ga. wire leads, unless noted. *Note:* Response times listed below are approximate.

(14) Probes have a magnetic holding force of 16 lbs.

(15) Probes have a bayonet connection and 1¾″ long mounting adapter with ⅜″-24 male connections.

(16) Probes have a bayonet connection.

Probe Type (Temp. Range)	Probe Lg.	Response Time, sec.	Max. Cable Temp.		
(8) Bare-Tip Probes (1/16″ dia.) with 3-ft. Fiberglass Cable					
J (+32° to +900°F)	1/16″	1.8	900°F	9251T91	$17.60
K (+32° to +900°F)	1/16″	1.8	900°F	9251T93	17.30
(9) Bare-Tip Probes (1/16″ dia.) with 6-ft. Fiberglass Cable					
J (+32° to +900°F)	1/16″	1.8	900°F	9251T92	19.30
K (+32° to +900°F)	1/16″	1.8	900°F	9251T94	19.70
T (+32° to +500°F)	1/16″	1.8	900°F	9251T96	19.00
(10) Type 316 SS Probes (3/16″ dia.) with 4-ft. Fiberglass Cable					
J (+32° to +900°F)	6″	3	900°F	3871K52	24.05
J (+32° to +900°F)	12″	3	900°F	3871K811	32.40
K (+32° to +900°F)	6″	3	900°F	3871K54	24.05
K (+32° to +900°F)	12″	3	900°F	3871K812	32.40
T (+32° to +700°F)	6″	3	900°F	3871K66	26.54
(11) Type 316 SS Probes (1/4″ dia.) with 4-ft. Fiberglass Cable					
J (+32° to +900°F)	6″	3	900°F	3871K53	22.60
J (+32° to +900°F)	12″	3	900°F	3871K821	32.40
K (+32° to +900°F)	6″	3	900°F	3871K55	23.49
K (+32° to +900°F)	12″	3	900°F	3871K822	32.40
T (+32° to +700°F)	6″	3	900°F	3871K77	23.18
T (–328° to +700°F)	12″	3	900°F	3871K823	32.40
(12) Type 316 SS Probes (3/16″ dia.) with 4-ft. Fiberglass Cable					
J (+32° to +1400°F)	6″	3	900°F	3871K911	$48.89
K (+32° to +1650°F)	6″	3	900°F	3871K912	55.45

Air/Immersion Thermocouple Probes with Round-Pin Male Plug

Round-Pin Connector

Bend one of these flexible probes to suit the needs of your application. They have round-pin male plugs (also known as standard connectors) and are Type 316 stainless steel. Response time is 0.6 seconds for 1/8″ dia. probes, 0.9 seconds for 3/16″ dia. probes, and 1.3 seconds for 1/4″ dia. probes. ***Probes with cable*** have a 3 ft. long fiberglass cable. Maximum cable temperature is 900°F.

To Order: Please specify thermocouple probe type: Type J (32° to 1400°F), Type K (32° to 1700°F), or Type T (–328° to +700°F).

Probes without Cable

Probe Lg.	1/8″ Dia. Probe		3/16″ Dia. Probe		1/4″ Dia. Probe	
6″	3856K91	$20.33	3856K71	$22.88	3856K72	$27.78
12″	3856K33	20.44	3856K94	22.89	3856K74	27.77
18″	3856K35	22.00	3856K95	25.44	3856K76	32.04
24″	3856K37	23.55	3856K96	28.01	3856K77	36.11

Probes with Cable

Probe Lg.	1/8″ Dia. Probe		3/16″ Dia. Probe		1/4″ Dia. Probe	
6″	3857K21	$34.44	3857K23	$36.89	3857K22	$41.78
12″	3857K84	34.44	3857K24	38.22	3857K85	42.11
18″	3857K86	34.89	3857K25	36.89	3857K87	45.89
24″	3857K88	37.56	3857K26	42.00	3857K89	49.74

For information about thermocouples and RTDs, see page 596.

Extended-Life Thermocouple Probes

Replace your standard thermocouple probe with one of these high-temperature probes. They have large-gauge wire and ceramic-sleeve insulation for a long service life. Thermocouple probes work well in aluminum die casting, heat-treating, and high-temperature furnace applications. They can be used alone or in a thermowell or protection tube. Probes have two wire leads that extend 1½″ past insulation. Response time is 5 seconds.

Type	Temp. Range
J	32° to 1400° F
K	32° to 2300° F

Type	O'all Dia.	Wire Gauge	12″ Length		18″ Length		24″ Length	
J	¼″	14	3859K41	$5.06	3859K42	$7.42	3859K43	$9.78
J	½″	8	3859K31	10.00	3859K32	14.83	3859K33	19.66
K	¼″	14	3859K44	6.29	3859K45	9.33	3859K46	12.36
K	½″	8	3859K34	15.96	3859K35	23.82	3859K36	31.69

Thermocouple and RTD Protection Tubes

An alternative to thermowells, these ceramic tubes hold up in hostile chemical environments where stainless steel and brass can't survive. Tubes have a 7/16″ ID and 11/16″ OD and accept probes up to ⅜″ dia. Maximum temperature is 3100° F. Cement used to connect ceramic tube to the fitting is chemical-set silicate cement. Connections are NPT male.

Tube Lg.		
12″	3822K11	$28.22
18″	3822K12	42.82
24″	3822K13	47.32

Noncontact Infrared Thermocouple Probes

Replace contact probes with these noncontact infrared probes. Since they can check the temperature without touching the surface, there's less mechanical wear—resulting in longer life and less downtime. All have a ¾″-16 UNF threaded body and a rugged NEMA 4, IP65, Type 316 stainless steel housing for protection against splashing liquids and dusty environments. Probes have a Type J thermocouple output, 39″ PVC cable, and two mounting nuts. They require 12-24 VDC power, 20 mA max. Use the *optional 110 VAC adapter* to convert your 110 VAC power supply to 24 VDC.

Temp. Range	Max. Working Distance	O'all Size, Dia. × Lg.		
32° to 662° F	4 ft.	¾″ × 3½″	3889K111	$255.98
86° to 932° F	4 ft.	¾″ × 3½″	3889K211	255.98
Optional 110 VAC Adapter			3889K31	111.16

Easy-to-Attach Thermocouple Probes

Bolt On *Adhesive Backed*

For an easily attached thermocouple to monitor your surface temperature, choose from a bolt-on or adhesive-backed probe. Wire leads are 48″ long. Probe is nickel with fiberglass insulation. Response time is 2 seconds.

Bolt-on thermocouple probes hold securely in high-vibration areas. Probe jacket is 300 series stainless steel. Bolt hole size is 3/16″. Mounting bolt is not included.

Adhesive-backed thermocouple probes are low-profile for tight-fitting areas. Probe jacket is fiberglass.

Type	Temp. Range	O'all Size, Lg. × Wd. × Thick.	Wire Gauge		
Bolt On					
J	32° to 900° F	⅝″ × 5/16″ × 1/16″	24	3648K22	$22.90
K	32° to 900° F	⅝″ × 5/16″ × 1/16″	24	3648K24	22.90
T	32° to 900° F	⅝″ × 5/16″ × 1/16″	24	3648K26	22.90
Adhesive Backed

Ready-to-Use Thermocouple Probes

Fast Response

With SS Thermowell

Take the guesswork out of building your thermocouple probe—these come ready to install. Probes come assembled with a protective head, an internal terminal block, and an NPT process connection.

To Order: Please specify thermocouple type from those listed.

Fast-Response Thermocouple Probes

Have a response time of 6 seconds. All probes have a cast aluminum head with a Type 316 stainless steel probe.

Available Temp. Ranges	
Type	Temp. Range
J	+32° to +1400° F
K	+32° to +1600° F
T	−328° to +700° F

Heavy Duty Fast-Response Thermocouple Probes

Probes have thicker walls for harsh applications. They are Type 446 stainless steel and have a Type 316 stainless steel compression fitting. Head is cast iron. Response time is 4.5 seconds. Head is FM approved.

Available Temp. Ranges	
Type	Temp. Range
J	+32° to +1400° F
K	+32° to +2100° F

Thermocouple Probes with Stainless Steel Thermowell

Equipped with a thermowell, these thermocouple probes are protected from pressure and corrosive liquids. Head is cast iron. Response time is 30 seconds.

Probes with Type 316 stainless steel thermowell have greater corrosion resistance and chemical compatibility than Type 304.

Available Temp. Ranges	
Type	Temp. Range

High-Accuracy RTD Probes

With 3-Pin Connector

With Bushing and Wire Leads

For continual high accuracy over time, as well as signal strength for long-range transmission, these RTD probes are ideal temperature sensors. Probes are Type 304 stainless steel and have a 100-ohm three-wire platinum element. Temperature range is −58° to +400° F. Response time is 10 seconds.

Probes with bushing and wire leads have a ½″ NPT male Type 303 stainless steel bushing with three wire leads. Wire leads are 14 ga. and 3″ long.

Dia.	With 3-Pin Connector: Probe Lg.			With Bushing and Wire Leads: Probe Lg.

¼″	12″	3866K86	79.84	12⅝″	3866K44	82.12

For information about thermocouples and RTDs, see page 596.

Ready-to-Use RTD Probes

With NPT Process Connection

With Quick-Clamp Connection

Ready to go whenever you are, these RTD probes come assembled with a protective head and process connection. All have a ¾″ NPT female conduit connection for simple connection to your RTD wire (see page 603). Probes have a 100-ohm three-wire platinum element.

Probes with NPT Process Connection

Come with a Type 304 stainless steel thermowell that protects the probe from harsh applications. Head is cast iron with an internal terminal block and a screw-on cap with retaining chain. Process connection is ¾″ NPT male. Terminal block accepts a maximum of 14-ga. wire. Probes are Type 304 stainless steel. Temperature range is –58° to +400° F. Response time is 30 seconds.

Probe Dia.	Probe Lg.	O'all Lg.	Conduit Connection, NPT Female

½″	11½″	20⅛″	¾″	6581T53 248.22

Sanitary Probes with Quick-Clamp Connection

Meet 3-A sanitary standard requirements and have a sanitary quick-clamp connection. For sanitary quick-clamp fittings, see pages 208-210. Quick-clamp flange is Type 304 stainless steel polished to a #4 sanitary finish. Head is white polypropylene with a screw-on cap and retaining chain. Probes have screw terminal connections and accept a maximum of 10-ga. wire. Probes are Type 316 stainless steel. Temperature range is –328° to +400° F. Response time is 5 seconds.

Flange OD	Tube OD	Probe Dia.	Probe Lg.	O'all Lg.	Conduit Connection, NPT Female

Cryogenic RTD Probes

With Wire Leads

With Process Connection

Don't get caught in the cold without the right RTD probe for the job. These cryogenic RTD probes are insulated to tolerate temperatures to –320° F, and they have a moisture-resistant seal. Probes include a certificate of calibration traceable to NIST (National Institute of Standards and Technology). They are Type 316 stainless steel and have a 100-ohm three-wire platinum element. Wire leads are 22 ga. Cable is PTFE insulated with an FEP jacket. Temperature range is –320° to +392° F. Response time is 12 seconds.

Probes with process connection have a ¼″ NPT male connection.

Create-Your-Own Thermocouple/RTD Probes

Create a custom assembly—simply choose a probe that fits your temperature range, cut it to the length you need, and add a head, terminal block, and fitting.

Probes

All are Type 304 stainless steel with 6″ wire leads and a 3″ sensing tip. Cut probe with a pipe cutter to your required length within the cuttable range. *Thermocouples* have two wire leads. *RTDs* have a 100-ohm three-wire platinum element.

24″ length has a 21″ cuttable range.

48″ length has a 45″ cuttable range.

Heads, Terminal Blocks, and Fittings

Heads include a screw-on cap with retaining chain, except 38705K86, which has a hinged cap. Process connection is ½″ NPT female. Conduit connection is ¾″ NPT female. *Hazardous-location cast iron head* is approved for use in Class I, Division I, Groups C and D, and Class II, Groups E, F, and G environments. UL listed.

Terminal blocks accept a maximum of 14-ga. wire.

Fittings are Type 303 stainless steel with a ½″ NPT male connection. *Oil-sealed spring-loaded fitting* has a chemical-resistant O-ring.

Easy-to-Attach RTD Probes

Choose from bolt on or adhesive backed for an easily attached RTD probe to monitor surface temperature. Probes have a platinum element and a 40″ wire lead.

100-ohm RTD probes are the most commonly used RTD.

1,000-ohm RTD probes offer greater accuracy.

A-E ***Bolt-on RTD probes*** attach with a bolt for a secure hold in high-vibration areas. All meet MS202 (Method 204, test condition D), which tests temperature measurement in environments with high vibration. Probe bodies are Type 304 stainless steel (unless noted). All except Style B have a mounting hole (bolts not included). *Style B* has an attached bolt that fits a ¼″ threaded hole.

F ***Adhesive-backed RTD probes*** are low profile and have a pressure-sensitive adhesive back for use on flat surfaces.

▲ Probe bodies are nickel-plated copper. ★ Wire leads are 24 ga.

For information about thermocouples and RTDs, see page 596.

Ready-to-Use RTD Probes with 4-20 mA Output

With NPT Conduit Connection

With DIN Connection

Incorporate panel instruments, switches, controllers, and recorders into your system using one of these RTD probes with a built-in transmitter. The transmitter converts the probe signal to a common 4-20 mA signal for use with standard electrical wire. All probes are Type 316 stainless steel. They have a 100-ohm three-wire platinum element and a ½″ NPT male process connection. Probes operate on 10 to 30 VDC.

Probes with NPT conduit connection have an aluminum head with a screw-on cap and retaining chain. Conduit connection is ¾″ NPT female. Probes have a spring-loaded fitting that compresses the probe length by ⅜″. The transmitter has screw terminal connections.

Probes with DIN connection have an overall head size of 1 1/16″ Dia. × 3 5/32″ Ht. CE approved; IP65 rated.

Panel-Mount Thermocouple Female Connection Strips

Flat-Pin (Mini)

Organize your thermocouples on an instrument panel with these connection strips. They have thermoplastic bodies and withstand temperatures up to 400° F. All connections are female. Strips mount into place with self-contained machine screws.

Flat-pin (mini) panel-mount connection strips accept a maximum wire size of 24 ga. Panel cutout is 1″ high for all.

Round-pin (standard) panel-mount connection strips accept a maximum wire size of 14 ga. Panel cutout is 1¼″ high for all.

T	3877K223	54.55	3877K243	71.43

(7) RTD Connectors

Connectors have white thermoplastic bodies and copper contacts. They accept a maximum wire size of 14 ga.

Male	3869K77	$5.75
Female	3869K76	8.41

(8&9) Wire-Clamp Brackets

Provide extra stability to keep wires attached to the connection. Made of Type 304 stainless steel.

8	For Flat-Pin (Mini) Connectors	3869K62	$2.00
9	For Round-Pin (Standard) and RTD Connectors	3869K61	2.11

For information about thermocouples and RTDs, see page 596.

Thermocouple Extension Wire with Connectors

6-ft. Length

10, 25, and 50-ft. Lengths

Lengthen the reach of your thermocouple probes when you use these cable extensions. They have a connector at each end, so they snap right into your existing connections.

6-ft. wires are self-retracting. They have 28-ga. wire with thermoplastic insulation and jacket. Maximum temperature is 259°F. ***10-ft., 25-ft., and 50-ft. wires*** have 24-ga. wire with PVC insulation and jacket. Maximum temperature is 221°F.

Thermocouple and RTD Signal Converters

Thermocouple Head Mount

Panel Mount

Also known as transmitters, these convert signals from a thermocouple or RTD to a common 4-20 mA signal. With this signal, you can incorporate panel instruments, switches, controllers, and recorders within your system. All have screw terminal connections. Signal converters for thermocouples accept two wire leads; those for RTDs accept three wire leads. Thermocouple and RTD probes are sold separately; see pages 598-602.

Head Mount— Also known as hockey pucks, these small 1 11/16″ Dia. × 13/16″ Dp. disc-style converters mount easily inside a head. They have an LED that varies in brightness according to the output signal strength, giving you visual indication of temperature. Accept a maximum of 24-ga. wire. Operate on 12 to 36 VDC.

Panel Mount with Digital Display— Have an aluminum 1/8 DIN housing that fits a 1 3/4″ Ht. × 3 5/8″ Wd. panel cutout. All have a 1/2″ high LCD and a resolution of 1°. Accept a maximum of 16-ga. wire. They operate on 115/230 VAC.

For Probe	Temp. Range		
Head Mount			
J Thermocouple	+32° to +572°F	38875K81	$78.66

RTD—100-ohm	−50° to +850°C	38535K56	226.86

Thermocouple and RTD Wire

Make your own thermocouples and RTDs or lengthen existing connections with this wire. All wire has insulation and a jacket to withstand high temperatures. Full coil length/maximum continuous length is 100 ft. We offer standard lengths of 10, 20, and 50 ft. as well as any length you may need.

Solid Thermocouple Wire

RTD Wire

Thermocouple Wire

Thermocouple wire lets you make new thermocouples. *Solid wire* is more rigid and easier to cut. *Stranded wire* is very flexible. ***Thermocouple extension wire*** lets you lengthen existing connections. UL recognized.

For information about thermocouples, see page 596. For information about electrical switches, see page 855.

Adjustable Temperature Switches

A

B

Take control of your temperature with the turn of a dial. These switches are rated for high amps, so they can control a heater directly without a relay or contactor. Adjust the actuation point within the temperature range. All are for use indoors. *Two-circuit switches* are double pole, single throw (DPST) to turn two circuits from "on" to "off" (normally closed), and *three-circuit switches* are triple pole, single throw (3PST) to turn three circuits from "on" to "off" (normally closed). All have screw terminal connections and three 7/32" mounting holes (fasteners not included). Probe and cable are copper, unless noted. Cable is 7-ft. long. Accuracy is not rated.

Switches with pilot light indicate when the switch is on. *Switches without enclosure* may be panel mounted. Panel cutout for 3626K47 and *K87* is 2 5/8" Ht. × 1 3/4" Wd.; for 3626K44 and *K84*, it is 2 5/8" Ht. × 2 1/8" Wd.

Optional packing seal and brass fitting seals the probe in tanks and pipes. Fitting has 3/8"-18 male threads.

♣ Probe and cable are steel.

Splash-Resistant Adjustable Temperature Switches

Dial Switch with Door

Digital Switch with Door

Self-contained in polycarbonate enclosures, these switches are splash-resistant. They are rated for high amps, so they can control a heater directly without a relay or contactor. Adjust the actuation point within the temperature range. All switches are set to turn circuits from "on" to "off" (normally closed). They are triple pole, single throw (3PST) to turn three circuits "on" or "off" except 35055K71, which is single pole, double throw (SPDT) to turn one circuit "on" or "off." All have screw terminal connections and four 1/4" dia. mounting holes (fasteners not included).

Switches with door are rated NEMA 4X for resistance to splashing liquids, corrosives, and dust. Door is translucent.

Dial switches, also known as bulb and capillary thermostats, are set with a dial. Probe and cable are copper with a PTFE sleeve. Cable is 5' 8" long. Accuracy is ±4° F. *Digital switches* have an LED display that is °F/°C selectable. Temperature is set with a button. Probe is a Type J thermocouple. Probe and cable are PTFE coated. Cable is 10-ft. long. Accuracy is ±1° F.

Heavy Duty Adjustable Temperature Switches

Probe with 6-ft. Cable

Immersion Probe with Threaded Stem

Rugged enclosures and sealed probes make these temperature switches suitable for harsh environments. When your actuation point is reached, switches activate an alarm or other device. Adjust the actuation point within the temperature range. All switches have a single pole, double throw (SPDT) relay that can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). All have screw terminal connections and mounting holes (fasteners not included). Accuracy is not rated. UL listed and CSA certified.

Indoor Switches— Have a NEMA 1 polycarbonate enclosure for indoor use. *Probes with 6-ft. cable* have a copper probe and cable and two 3/16" dia. mounting holes. *Immersion probes with threaded stem* have a brass probe with 3/8" NPT male threads.

Watertight Switches— Have an aluminum enclosure designed to resist splashing liquids. CE approved. *Probes with 6-ft. cable* have two 17/64" dia. mounting holes. *Switches with one actuation point* have a copper probe and cable; units *with two actuation points* have a Type 304 stainless steel probe and cable. *Immersion probes with threaded stem* have a nickel-plated brass probe with 1/2" NPT male threads.

Hazardous-Location Switches— Have an aluminum enclosure designed for resistance to splashing liquids. Enclosures are UL listed and C-UL certified for Class I, Div. 1 and 2, Groups B, C, D and Class II, Div. 1 and 2, Groups E, F, G hazardous locations. All have four 17/64" dia. mounting holes. *Probes with 6-ft. cable* have a Type 304 stainless steel probe and cable. *Immersion probes with threaded stem* have a brass probe with 1/2" NPT male threads.

For information about electrical switches, see page 855.

Cartridge-Style Adjustable Temperature Switches

Control the temperature of your tank or process by incorporating one of these switches. They are suitable for nonvibration applications located away from the heat source. Simply turn the adjustment screw to change the actuation point within the temperature range. Probe housing is Type 304 stainless steel. Switches have two 8″ long wire leads with fiberglass insulation. Accuracy is not rated. UL recognized. Switches with a 5/8″ cartridge OD are also CSA certified.

Turns "on" to "off" switches are single pole, single throw (SPST), set to turn one circuit from "on" to "off" (normally closed) at your actuation point. ***Turns "off" to "on" switches*** are single pole, single throw (SPST), set to turn one circuit from "off" to "on" (normally open) at your actuation point.

Nonadjustable Surface-Temperature Switches

Also known as thermostats, these switches maintain the temperature of your flat surface or pipe within the specified range. Switches are single pole, double throw (SPDT) to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). These are set to turn your heater on when it drops below the minimum actuation point and turn your heater off when the surface temperature rises above the maximum actuation point. Switches are nonadjustable and come with minimum/maximum temperature actuation points already set. Accuracy is not rated.

Switches have a Type 304 stainless steel flange with two 11/64″ dia. mounting holes (fasteners not included). Include 4-ft. long wire leads. Maximum ambient temperature is 221° F. Housing is phenolic. Overall height is 2 15/16″. CSA certified and UL recognized. FM approved for Class I, Div. 2, Groups A, B, C, and D hazardous locations.

Actuation Points Min. (Heater On)	Max. (Heater Off)	Amps	VAC (Phase)		
45° F	60° F	25	240 (1)	3599K42	$58.00
60° F	75° F	25	240 (1)	3599K43	58.00
90° F	105° F	25	240 (1)	3599K44	58.00
185° F	200° F	25	240 (1)	3599K45	58.00

Remote Room-Monitoring Adjustable Temperature Switch

Optional Remote Temperature Sensor

Be aware of changing air temperatures with this high/low-indicating temperature switch. Adjust the actuation point within the temperature range. When the temperature rises above or falls below your actuation point, the digital display flashes the current temperature reading and displays "HI" or "LO."

Switch has two single pole, double throw (SPDT) relays that can each be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Relays can activate remote alarms. The switch is °F/°C selectable and has a 0-120 minute time delay. It includes a built-in 32° to 122° F probe for ambient temperature. Can be used simultaneously with one of the optional remote temperature sensors (sold separately). The switch has an ABS plastic housing that mounts flush and a 7/8″ high LCD. Accuracy is ±1° F; resolution is 1° F. It requires a 12 VDC power supply (sold separately).

Remote-mount buzzer sounds at 90 dB when temperature is above or below actuation points. It has two wire leads that attach to the alarm. ***Optional remote temperature sensors*** have two wire leads that attach to the alarm.

★ **To Order:** Please specify 10-, 25-, 50-, 100-, or 250-ft. length.

Plug-In Temperature Variable Switch with NIST Certificate

Control power to your equipment based on your programmed temperature settings. Switch conforms to NIST (National Institute of Standards and Technology) standards and includes a certificate of calibration traceable to NIST. Switch is single pole, single throw (SPST) to turn one circuit from "off" to "on" (normally open). Turns any piece of equipment that is rated for 115 VAC up to 15 amps on or off when temperature rises above or falls below your actuation points. Accuracy is ±1.8° F.

Switch accepts up to three pairs of timed on/off events per day; a manual override lets you turn the equipment on or off without disturbing programmed settings. Switch includes two units—the switch body and a relay, each measuring 5 1/2″ Ht. × 2 3/4″ Wd. × 1 1/4″ Dp. Plugs into a three-prong outlet. Switch has a 1/2″ high LCD that's powered by two included batteries. Resolution is 0.1° F. °F/°C selectable. Probe is attached to a 3 1/2-ft. cable.

Temp. Range	Amps	VAC (Phase)	Probe, Dia. × Lg.		
–4° to +140° F	15	115 (1)	1/4″ × 1″	3313K21	$168.40

Plug-In Temperature Variable Switches

Just plug your heating equipment into one of these switches and turn the knob to adjust the power supplied to your heating device. A separate thermometer is required to monitor temperature. Switches are single pole, single throw (SPST) to turn one circuit from "off" to "on" (normally open). They have a 6-ft. power cord with three-prong plug. Operate on 115 VAC (single phase) and provide 115 VAC up to 1,500 watts. Accuracy is not rated. *Solid-state model* reduces arcing of the switch contacts.

	O'all Size, Ht. × Wd. × Dp.		
Standard Switch	3 5/8″ × 2″ × 2 1/4″	35655K88	$102.86
Solid-State Switch	3 5/8″ × 2″ × 2 1/4″	35655K89	114.29

Easy-to-Use Programmable Temperature Controllers

With a simple menu and digital keypad, setting these controllers is a snap! Just adjust the actuation points for your heater or other devices. Controllers compare the input from your temperature probe (sold separately, see pages 598-602) to your programmed actuation point and then signal your heater to turn on or off.

All controllers have a single pole, double throw (SPDT) relay that can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). °F/°C selectable and include a panel-mount adapter. They accept probes with bare wire leads. Overall size is 2 13/16″ Ht. × 2 13/16″ Wd. × 2″ Dp. UL recognized, CSA certified, and CE approved.

For Probe	Temp. Range	Amps @ VAC (Phase)	DIN Size		
J Thermocouple	32° to 392° F	8 @ 120 (1)	1/8	4314K2	$177.33
K Thermocouple	32° to 2192° F	8 @ 120 (1)	1/8	4314K6	177.33
RTD-100-ohm	32° to 1472° F	8 @ 120 (1)	1/8	4314K8	177.33

For information about thermocouples and RTDs, see pg. 596. For information about electrical switches, see pg. 855.

Dial-Set Temperature Controllers

It's easy to see and adjust your actuation point with the simple dial on these temperature controllers. All controllers are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). They have a dual-scale (°F/°C) setting dial and include a panel-mount adapter. All have pins to connect to standard 8-pin circular sockets with screw terminal connections (sold separately; see page 910). Controllers accept probes with bare wire leads (sold separately; see pages 599-601). All operate on 100 to 120 VAC. UL recognized; CSA certified.

On/Off Control—Designed for simple on/off applications. When the temperature reaches your actuation point, output turns off until temperature falls below your actuation point again.

P-D (Proportional-Derivative) Control—These controllers stabilize the temperature better than the on/off control. When the temperature nears your actuation point, output slows to avoid temperature overshoot.

For Probe	Temp. Range	Amps @ VAC (Phase)	DIN Size	O'all Size, Ht. × Wd. × Dp.	On/Off Control		P-D Control	
J Thermocouple	32° to 392° F	3 @ 250 (1)	1/16	1 3/4″ × 1 3/4″ × 2 7/8″	33215K71	$141.46	33215K75	$112.20

Precision Programmable Temperature PID Controllers

Controllers compare the input from your temperature probe (probes sold separately, see pages 598-602) to your programmed actuation point and then signal your heater to turn on or off. Internal software (fuzzy logic control with proportional-integral-derivative/PID) learns the behavior of your process and reacts accordingly. Controllers have multiple programming options for maintaining your actuation point and reacting to process changes, which eliminates actuation point overshoot during start-up and process disturbances. All are auto/manual selectable, °F/°C selectable, and have screw terminal connections. UL and C-UL recognized and CE approved.

Thermocouple and RTD Controllers

1/16 DIN 1/4 DIN

Controllers accept input from thermocouple types J, K, and T and 100-ohm RTDs. All operate on 90 to 264 VAC.

Relay output controllers are single pole, single throw (SPST) to turn one circuit from "off" to "on" (normally open). Have screw terminal connections. Include mounting brackets.

1/16 DIN size units have one control and two alarm relays.

1/4 DIN size units have two control and two alarm relays.

Type	Temp. Range	Accuracy
J	−58° to +1832° F	±1.8°
K	−58° to +2498° F	±1.8°
T	−454° to +752° F	±1.8°
RTD	−328° to +932° F	±0.36°

DIN Size	LED Ht.	O'all Size, Ht. × Wd. × Dp.	Relay Output Amps @ VAC (Phase)		4-20 mA Current Output	
1/16	1/4″	1 7/8″ × 1 7/8″ × 4″	5 @ 110 (1)	38615K71	$215.08	38615K73	$249.04
1/4	1/2″	3 3/4″ × 3 3/4″ × 3 1/4″	5 @ 110 (1)	38615K72	338.16	38615K74	370.89

Splash-Resistant Thermocouple Controllers

1/32 DIN 1/8 DIN

NEMA 4X faceplates protect these controllers from exposure to splashing liquids, corrosives, and dust. Controllers accept input from thermocouple types J, K, and T. All sizes operate on 100 to 240 VAC. The ***1/32 DIN size*** has one control relay. The ***1/16 DIN size*** has one control and one alarm relay. ***1/8*** and ***1/4 DIN sizes*** have one control and two alarm relays. ***1/16***, ***1/8***, and ***1/4 DIN sizes*** also have dual LEDs that show the actuation point and process variable simultaneously.

Relay output controller for ***1/32 DIN size*** is single pole, single throw (SPST) to turn one circuit from "off" to "on" (normally open). Relay output for ***1/16***, ***1/8***, and ***1/4 DIN sizes*** are single pole, double throw (SPDT), which can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed).

Solid-state relay voltage output controllers actuate an external solid-state relay (sold separately; see 7456K on page 905).

Type	Temp. Range	Accuracy

Temperature Indicating Crayons and Liquid

Apply directly on the surface you're monitoring. The mark melts when the rated temperature has been reached. These are nonreversible—once a mark has melted, it cannot be used to indicate again. Accuracy is ±1%. Crayons and liquid are labeled with °F and °C temperatures.

Crayons

Crayons are 1/2″ Dia. × 5″ Lg. Each includes an aluminum holder.

To Order: Please specify temperature from the listing below.

300° F	400° F	525° F					

Thinner returns liquid to workable consistency when it dries out. Comes in a 2-oz. bottle. This product is compliant under all state VOC rules in effect on June 1, 2011.

Liquid with Brush Applicator ..... 3261K93 .... $14.76
Thinner ..... 3261K96 .... 5.61

Mini Crayon Assortments

Crayons are 1/2″ Dia. × 2 1/2″ Lg. They come in a plastic case with a holder for each crayon.

Qty.	Temperatures		Pkg.
10	125° to 350° F (in 25° increments)	3224K23	$80.45
10	300° to 750° F (in 50° increments)	3224K24	80.45
20	125° to 500° F (in 25° increments); 550° F, 600° F, 700° F, 800° F	3224K32	159.23

One-Time-Use Single-Point Temperature Indicating Labels

Temperature window turns black when the temperature point is reached. These labels are nonreversible—once a window has turned black, it cannot be used to indicate again. Labels are ½″ square and the dots are 3/16″ dia. Accuracy is ±2%. Labels are self-adhesive and have °F and °C markings.

160°F Label

To Order: Please specify temperature from the listing below.

130°F	180°F	220°F	260°F	300°F
140°F	190°F	230°F	270°F	375°F

170°F	210°F	250°F	290°F	500°F

Sheet of 21 Labels **5952K21** $12.35

One-Time-Use Low-Temperature Indicating Labels

Monitor foods, pharmaceuticals, and equipment. These labels have a temperature window that turns from clear to red to indicate that the temperature point has been reached. These are nonreversible—once a window has turned red, it cannot be used to indicate again. Size is 11/16″ Ht. × 1 3/8″ Wd. Accuracy is ±3.6°F. Labels are self-adhesive and have °F and °C markings. Package quantity is two.

Descending Label

Descending labels indicate that the surface temperature has fallen to your temperature point. ***Ascending labels*** indicate that the surface temperature has risen to your temperature point.

Descending

Temp. Point		Pkg.

Temperature Indicating Labels

Get a visual indication of your changing surface temperature. These labels have temperature windows that turn from black to green to measure approximate temperature. When the surface cools, the window color returns to black. Accuracy is ±1.8°F. Labels are self-adhesive and have °F and °C markings. Package quantity is 10.

Temperature Indicating Liquid and Thermal Sheets

Liquid crystals change color to indicate surface temperature. As the temperature increases, the crystal color changes from black to red, red to green, and green to blue within your temperature range. As crystals cool, they return from blue to black.

Temperature liquid can be brushed onto a clean black surface and washes off with water. Accuracy is ±1.8°F.

Thermal sheets are self-adhesive and can be cut. Accuracy is ±2°F.

Liquid

6″×6″ Sheet

Temp. Range	*.88-oz. Liquid*		*6″×6″ Sheets*		*12″×12″ Sheets*	
77° to 86°F	**5106K64**	$61.67	**5106K52**	$8.70	**5106K51**	$27.00

Temperature Indicating "Hot" Labels

A

B

Safety is first with these self-adhesive labels that change color and display a message of "hot" when the temperature point is reached. All labels with a temperature point of ***122°F*** change from yellow to orange, and those with a temperature point of ***157°F*** change from red to black. When the surface cools, labels return to their original color. Accuracy is ±1.8°F. Package quantity is 10.

	Style A			Style B		
Temp. Point	**Dia.**		**Pkg.**	**Ht.×Wd.**		**Pkg.**
122°F	1½"	**83375T83**	$9.84	⅝"×1½"	**9257T14**	$8.87
157°F	1½"	**83375T82**	9.84	⅝"×1½"	**9257T16**	8.87

Humidity Cards with NIST Certificate

Monitor exposure of your sensitive materials to relative humidity. Cards conform to NIST (National Institute of Standards and Technology) standards and include a certificate of calibration traceable to NIST.

Indicators on the card change color to show both the current relative humidity and maximum relative humidity reached. The current relative humidity indicator is reversible—it changes continuously based on conditions. The maximum relative humidity indicator is nonreversible—once the paper has turned blue, it cannot be used to indicate again. The current relative humidity range is 0% to 100%; maximum relative humidity range is 50% to 90%, both expressed in increments of 10%. Accuracy is ±5%. Size is 4"×4". Package quantity is two.

5311K12 ..... **Pkg.** $15.40

High/Low Alarm Temperature Chart Recorder with Probe

Keep track of out-of-range conditions with a programmable audio/visual high/low temperature alarm with remote-sensing capability in one recorder. Includes a 4-ft. long bare wire probe. Add an optional 10-ft. probe extension (sold separately below) for greater reach. LCD has 1" high digits. Recording period and temperature range are selectable. (See charts sold separately below for available recording periods and temperature ranges.) Accuracy is ±1.8°F.

Recorder operates on 120 VAC with a 6-ft. cord and two-prong plug. Comes with power backup (four AA batteries included). Housing is high-impact ABS plastic. Size is 9³⁄₁₆" Ht.×9³⁄₁₆" Wd.×3⅛" Dp.

Temperature and Humidity Chart Recorder with NIST Certificate

Get two for one with this recorder that tracks both temperature and relative humidity. Recorder conforms to NIST (National Institute of Standards and Technology) standards and includes a certificate of calibration traceable to NIST. Recorder has a built-in sensor. Accuracy is ±1.8%. Relative humidity sensor range is 0% to 95%; accuracy is ±3%. Recording period and temperature range are selectable. (See charts sold separately below for available recording periods and temperature ranges in °F or °C.)

Recorder operates on four AA batteries (included). Housing is ABS plastic. Size is 9³⁄₁₆" Ht.×9³⁄₁₆" Wd.×3⅛" Dp.

Temperature Chart Recorders with Probe

A probe with 15-ft. cable lets you monitor temperatures remotely. You can also add up to 100 feet of extension wire (see 3870K on page 603). Probe is Type 304 stainless steel. Recorders have a LED display with ½" high digits. Recording period and temperature range are selectable. (See charts sold separately below for available recording periods and temperature ranges in °F or °C.) Accuracy is ±2°F.

Recorders are freestanding or can be wall mounted (two keyhole slots accept screws with ⁵⁄₁₆" dia. heads, not included). Operate on 120 VAC with a 6-ft. cord and two-prong plug. Power backup requires eight AA batteries, sold separately below. Recorders come with 60 assorted charts. Included charts come in three temperature ranges (°F or °C) and all recording periods below. Housing is polycarbonate. Size is 9¼" Ht.×7¼" Wd.×2¾" Dp. CE approved.

Temperature, Humidity, and Dew Point Chart Recorder with Probe

Have it all—record temperature, relative humidity, and dew point. Recording period and temperature range are selectable. (See charts sold separately below for available recording periods and temperature ranges in °F or °C.) The LCD is selectable to display actual and min./max. readings of temperature, or relative humidity and calculated dew point. LCD digit height is 1". Recorder includes one audio and one visual high/low alarm and a 10-ft. long cable with an ABS plastic probe.

Temperature accuracy is ±1.8°F (±1°C). Relative humidity sensor range is 0% to 95%; accuracy is ±3%. Dew point range is –22° to +122°F (–30° to +50°C); dew point accuracy is ±7.2°F (±4°C).

Operates on 120 VAC with 6-ft. cord and two-prong plug. Comes with power backup (4 AA batteries included). Housing is high-impact ABS plastic. Size is 9³⁄₁₆" Ht.×9³⁄₁₆" Wd.×3⅛" Dp.

Programmable Temperature, Humidity, and Pressure Chart Recorders

Single-Input Recorder

Keep a record of temperature, relative humidity, or pressure in your process on a single chart. Simply use the keypad to set the recorder for your application. Use set recording periods of 8 hours, 24 hours, and 7 days, or program charts for any length of time from 6-744 hours.

Recorders accept input from a common 4-20 mA signal, thermocouple types J, K, and T, and 100-ohm RTDs. Thermocouple and RTD probes are sold separately, see pages 598-602.

Recorders operate on 120/240 VAC. All have screw terminal connections. They can be mounted on a wall or an instrument panel. Housing is Noryl. Size is 16½″ Ht. × 14″ Wd. × 5⅝″ Dp. Include 100 blank charts and a pressure-sensitive stylus.

Single-input recorder accepts input from a single sensor.

Dual-input recorder accepts input from two sensors. It can document input from both sensors on a single chart and timeline.

			Each
Single-Input Recorder	**41295K81**		$2,077.48
Dual-Input Recorder	**41295K82**		2,444.09
Extra 12″ Charts (100/Pkg.)	**41295K79**	**Pkg.**	$53.01
Replacement Stylus	**41295K8**	**Each**	$250.90

USB-Connection Temperature and Humidity Logger

Track and store temperature and relative humidity—this logger saves your data for upload via USB connection to your PC. Logger stores up to 32,000 sample points. It records data in 1-second increments in intervals from once per second to once per day. Logger records in °F and °C.

Temperature range is –10° to +176° F. Temperature accuracy is ±0.8° F at 20° to 120° F, ±1.8° F at –10° to +20° F, and ±1.8° F at 120° to 176° F. Relative humidity range is 0% to 95%. Relative humidity accuracy is ±2%. Housing is polycarbonate. Size is 3 1/16″ Ht. × 2 1/16″ Wd. × ⅞″ Dp. Powered by a CR2450 coin cell battery (included).

Software program (sold separately below) is required and includes a 6-ft. USB cable. *System Requirements*: Windows 98 or newer, a USB port, and a CD-ROM drive.

Temperature/Humidity Logger	**3272K47**	$198.23
Software Program and 6-ft. USB Cable	**3053K91**	99.74

Oven Thermometer

Check your oven for proper calibration. Thermometer has a temperature range of 100° to 600° F with graduations of 10° F. It is mercury-free and filled with spirits (alcohol) and blue dye. Thermometer stands on a flat surface or hangs from the attached clip. Tube is made of glass. Housing is Type 430 stainless steel. Overall size is 2½″ Ht. × 4⅞″ Wd.

7974K32		$18.51

Freezer Thermometers

NSF Certified

Bottle Style

Keep tabs on the temperature inside freezers, coolers, and storage areas. Thermometers are mercury-free.

NSF Certified— Tube is made of glass and filled with spirits (diesel fuel) and red dye. Housing is polycarbonate. Has Type 430 stainless steel clips for hanging.

Bottle-Style— The bottle design insulates your thermometer from rapid temperature changes, such as when opening a freezer door, for more accurate readings. Thermometers include a serial number and a statement of accuracy traceable to NIST (National Institute of Standards and Technology). The thermometer and bottle are glass and filled with spirits (a citrus-based oil) and green dye. Bottle is 2½″ Ht. × 1½″ Wd. × 1½″ Dp.

Temp. Range	Grad.	Lg.		
NSF Certified				
–20° to +80° F/–30° to +30° C	2° F/2° C	4⅝″	**4132K11**	$6.28
Bottle-Style				
–30° to 0° C	0.5° C	5 5/16″	**3383K61**	70.14
–5° to +15° C	0.5° C	4⅞″	**3383K63**	70.14

Hand-Held Temperature and Humidity Recorder

Record temperature and relative humidity on the go with this hand-held, battery-powered printing recorder. Displays and prints min./max. readings and the month, day, hour, and minute in 24-hr. format. It takes readings every 10 seconds and can be programmed to print in selected increments from 10 seconds to 59 minutes, 59 seconds.

Temperature accuracy is ±1.8° F (±1° C). Relative humidity accuracy is ±5%. Two-line LCD display has ⅜″ high digits. Housing is ABS plastic. Size is 7½″ Ht. × 3″ Wd. × 1½″ Dp. Includes a remote temperature/relative humidity probe with 4-ft. cord, probe holder stand, roll of paper, 6 AAA batteries, and carrying case.

Temp. Range	Humidity Range		Each
–4° to +140° F	10% to 95%	**38495K21**	$398.51
Replacement Paper (2 Rolls/Pkg.)		**38495K62**	**Pkg.** $12.29

Temperature/Humidity Loggers

Record data over a long period of time—loggers track and store your temperature and relative humidity for upload to your PC. Units store up to 16,000 sample points. They are selectable to record data in intervals from once every 10 seconds to once every 2 hours. Digital display shows your current temperature. °F/°C selectable.

Temperature range is –22° to +122° F. Temperature accuracy is ±1° F. Resolution is 1° F. They have an LCD with two digits that are ⅜″ high, an internal 3.6-volt lithium battery, and include software and cable to transfer data to your PC. Housing is ABS plastic. Size is 2 13/16″ Dia. × ⅞″ Dp. *System requirements*: Windows 98 or newer, a CD-ROM drive, and an RS-232 serial port.

9199K24 is IP65 (protected against dust and water jets) rated. **9199K26** is IP60 (dustproof) rated.

Temperature/humidity logger records temperature as stated above and relative humidity from 0% to 100%. Relative humidity accuracy at room temperature is ±3% from 0% to 90%, ±6% from 90% to 100%.

Optional external temperature probe allows for remote monitoring. Probe is Type 316 stainless steel.

Temperature Logger	**9199K24**	$136.36
Temperature/Humidity Logger	**9199K26**	213.21
Optional External Temp. Probe with 8-ft. Cable	**9199K41**	60.54

Temperature and Pressure Logger

Logger tracks and stores temperature and pressure data for upload to your PC. Use with compressed air, water, and hydraulic oil. Memory capacity is 21,500 data samples (10,750 temperature; 10,750 pressure). Temperature sensor has a 15-ft. cable and an accuracy of ±1° F. Pressure sensor has a 6-ft. cable, a Type 17-4 PH stainless steel NPT male connection, and an accuracy of ±3 psi. Set the sampling interval from 1 sec. to 18 hours. Logger has a polycarbonate case, operates on one 9-volt battery (sold separately), and measures 2½″ Ht. × 3″ Wd.

Software program can be used with more than one logger. Comes with a 6-ft. USB cable. *System Requirements*: Windows 95 or newer, a USB port, and a CD-ROM drive.

Temp. Range	Pressure Range	Pipe Size		
–40° to +150° F	0-500 psi	¼″	**3440K44**	$228.92
Software Program and PC Interface			**3440K54**	56.72
9-Volt Battery			**71455K56**	2.75

Outdoor Thermometers

A ***B***

Bracket Mount

Get current temperature readings with these mercury-free thermometers that can be mounted outdoors. Thermometers have a glass tube.

Style A have a temperature range of –50° to +120° F/–45° to +50° C with graduations of 2° F/1° C. Tubes are filled with spirits (diesel fuel) and red dye. Housing is aluminum. *Wall mount* has two ⅛″ dia. mounting holes. *Bracket mount* has two ¼″ dia. mounting holes.

Style B has min./max.-indicating markers. Thermometer has a temperature range of –40° to +120° F/–40° to +50° C with graduations of 2° F/1° C. Tube is filled with spirits (alcohol) and blue dye. Housing is ABS plastic. It has two 5/16″ dia. mounting holes.

	Ht. × Wd.			
(A) Wall Mount	9″ × 2⅝″	**11165K63**	$6.51
(A) Bracket Mount	8½″ × 5″	**3934K2**	6.84
(B) Wall Mount w/Min./Max.	9¾″ × 2¼″	**7859K58**	26.60

Indoor and Outdoor Thermometers with Probe

Monitor indoor and outdoor temperatures simultaneously. Temperature ranges are 23° to 122° F indoor and –58° to +158° F outdoor. Thermometers have an ABS plastic housing. They include probes with 10-ft. cable for outdoor readings. Both have a min./max. memory feature. They are wall-mountable and also have flip-out stands.

°F/°C Selectable with Clock

Has a three-line LCD with 3/4″ high digits that shows time of day and indoor and outdoor temperatures. Also has a programmable audible alarm clock with eight-minute snooze. Accuracy is ±6° F. Resolution is 0.2° F. Size is 4 1/2″ Ht. × 2 1/2″ Wd. × 3/4″ Dp. Has one 5/16″ dia. mounting hole. Operates on two AAA batteries (included).

40195K11 ..... $46.51

Big Digit

Thermometer has a two-line LCD with 1 1/8″ high digits that shows indoor and outdoor temperatures. Accuracy is ±6° F. Resolution is 0.1° F. Size is 4″ Ht. × 4″ Wd. × 5/8″ Dp. Has two 1/8″ dia. mounting holes. Operates on one AAA battery (included).

40195K21 ..... $27.32

Panel-Mount Mini Thermometer

Great for tight spaces—incorporate this thermometer into your instrument panel. Temperature range is –40° to +300° F. Thermometer is °F/°C selectable. Accuracy is ±1.8° F. Resolution is 0.1° F. It has an LCD with 3/8″ high digits. Housing is ABS plastic. Size is 2″ Ht. × 2 7/8″ Wd. × 1 1/8″ Dp. Requires a panel cutout of 2 3/4″ Wd. × 1 1/2″ Ht. Has two 1/8″ dia. mounting holes. Includes a remote sensor with a nickel-plated brass tip and 10-ft. cable. Operates on one AAA battery (included). *Note:* Accuracy is at the middle of temperature range and may be less accurate at range limits.

4141K11 ..... $25.66

Panel-Mount Refrigerator Thermometer with Audible Alarm

Stay on top of your temperature—an alarm sounds (85 dB at 3.9″) and the 9/16″ high red LED digits flash when the temperature rises above your actuation point. The stainless steel faceplate and metal enclosure make this thermometer suitable for harsh environments. Comes with a 6-ft. refrigerator probe. Probe has 1 1/2″ wire leads.

Temperature reading range is –25° to +99° F; actuation point range is –15° to +50° F. Thermometer is °F/°C selectable. Accuracy is ±3° F. Resolution is ±1° F. Designed for panel mounting, it is 5″ Ht. × 3 1/8″ Wd. × 1 1/16″ Dp. and has two mounting holes (fasteners included). Requires a panel cutout of 3 7/8″ Ht. × 2 7/8″ Wd. Alarm works on 12 to 28 VDC/AC (power supply sold separately below).

Thermometer with Alarm	**3825K2**	$145.90
12 VAC Output/120 VAC Input Power Supply	**3825K11**	18.51

Compact Dial Thermometers

The small size of these dial thermometers makes them perfect for use in tight spaces. Designed for measuring air temperature, they have a perforated dial case that allows air to flow into the unit for a faster response time. All are made of anodized aluminum and have a glass lens.

Thermometers sit on a flat surface. 3389K18 and 3389K19 can also be mounted on a wall using the optional bracket sold separately below.

4033K11 has a reference pointer that you set to indicate when a critical temperature is reached.

Temp. Range	Grads.	Accuracy	O'all Size, Dia. × Ht.		
–20° to +160° F	2° F	±3.2° F	2″ × 1″	**3389K18**	$76.53
0° to 150° F	1° F	±1° F	3 3/4″ × 1 1/4″	**4033K11**	107.84
0° to 250° F	2° F	±5° F	2″ × 1″	**3389K19**	76.53
Optional Wall-Mount Bracket for 3389K18, K19				**3389K84**	36.48

Easy-to-Read Dial Thermometers

18″ Dial

See your temperature easily with these extra-large dials that can be read from a distance. Thermometers can be used indoors and outdoors and are designed to hang on a wall. Temperatures are shown in °F and °C.

3997K12 displays relative humidity from 30% to 90% with an accuracy of ±8%.

3881K41 displays relative humidity from 0% to 100% with an accuracy of ±7%.

Dial Size	Temperature Range	Graduation Marks	Accuracy	Face Material	Lens Material

Temperature and Humidity Meters

A

B

C

D

E

Get temperature and relative humidity readings from a single source. Meters have an ABS plastic housing. Mounting fasteners are not included, except for Style A. *Digital meters* have an LCD with 1/2″ high digits and include batteries.

Note: Accuracies are at the middle of temperature ranges and may be less accurate at range limits.

A Analog Indoor/Outdoor Thermometer with Indoor Humidity Meter—Includes a probe with 36″ cable for measuring outdoor temperatures. Has two mercury-free thermometers and a relative humidity dial indicator. Fasteners included.

B Digital Indoor Meter with Memory—Includes memory recall of min./max. temperatures and relative humidity. °F/°C selectable. Has two 3/32″ dia. mounting holes and a pull-out stand.

C Digital Indoor/Outdoor Thermometer with Indoor Humidity Meter—Comes with a probe with 10-ft. cable for measuring outdoor temperatures. Includes memory recall of min./max. temperatures and relative humidity. °F/°C selectable. Has one 3/32″ dia. mounting hole and a pull-out stand.

D Digital Indoor Meter—Mounts with two 3/8″ dia. keyhole slots and has a pull-out stand.

E Digital Indoor High-Accuracy Meter with NIST Certificate—Measure dew point in addition to temperature and relative humidity. Conforms to NIST (National Institute of Standards and Technology) standards and includes a certificate of calibration traceable to NIST. Dew point range is –40° to +140° F with ±0.8° F accuracy. Meter has audible high/low alarms. °F/°C selectable. Cable is 4-ft. long.

Optional software and RS-232 cable allow you to upload data directly to your PC. (Requires Windows 98 or newer, a 3 1/2″ disk drive, and an RS-232 serial port.)

Temperature and Humidity Dial Indicators

Wall mount these dial indicators for a clear view of indoor conditions. *Note:* Accuracies listed below are at the middle of temperature and humidity ranges and may be less accurate at range limits.

A ***Humidity-Only Indicator—*** Includes mounting fasteners and has a polystyrene lens.

B ***Certified Temperature/Humidity Indicators—*** Accuracy is certified to DIN EN ISO 9001 (certificate included). All have a glass lens. 3993K62 has one 1/4″ dia. keyhole slot (fastener not included); *K61* and *K71* have a 3/8″ wide flange and include fasteners.

	Dial Size	Temperature Range	Temperature Accuracy	Humidity Range	Humidity Accuracy	Case Material		
A	3 1/2″			0% to 100%	±6%	Galvanized Steel	2131K5	$19.93
B	5″	10° to 170° F (–12° to +76° C)	±2° F (±1.1° C)	0% to 100%	±3%	Stainless Steel	3993K62	260.00
B	5″	10° to 170° F (–12° to +76° C)	±2° F (±1.1° C)	0% to 100%	±3%	Black-Finish Aluminum	3993K61	265.33
B	5″	10° to 170° F (–12° to +76° C)	±2° F (±1.1° C)	0% to 100%	±3%	Brass	3993K71	280.00

Hand-Held Temperature and Humidity Meters

Carry one of these battery-operated meters with an easy-to-read LCD to make fast system checks. Meters are °F/°C selectable and include batteries. Housing is ABS plastic.

C&D ***Pen-Style Meters—*** Display temperature and relative humidity simultaneously. Can also display minimum and maximum readings. Come with a belt clip. LCD digits are 3/4″ high.

Style D conforms to NIST (National Institute of Standards and Technology) standards and includes a certificate of calibration traceable to NIST.

E ***Meter with Built-in Probe—*** Two-line display is selectable for relative humidity/dew point. Displays time and date. Has min./max., average, and data-hold functions. LCD digits are 1/2″ high.

F ***Meter with Remote Probe—*** Probe has a 3-ft. cable for checking hard-to-reach spots. Display is selectable for relative humidity/dew point. LCD digits are 1/2″ high.

	Meter Type	Temperature Range	Temperature Accur.	Humidity Range	Humidity Accur.	Battery Type	O'all Sz., Ht. × Wd. × Dp.

Humidity Sensor and Controller

Monitor and adjust your relative humidity with this sensor and controller. Range is 10% to 100% relative humidity with ±3% accuracy from 10% to 90%. Housing is ABS plastic.

Sensor

Controller

Sensor— Generates 0-1 VDC output for accurate sensing. Temperature range is 32° to 140° F. Connects to controller with 3-ft. wire leads. Has two 1/4″ dia. mounting holes. Fasteners not included.

Controller— Has high/low actuation points for calibration. Temperature range is 20° to 158° F. Has a relay that is single pole, double throw (SPDT), which can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Relay is rated for 4 amps. Install in a 1 11/32″ Ht. × 3 3/32″ Wd. panel cutout. LED digits are 3/8″ high. Operates on 24 VAC. UL recognized.

	O'all Size, Ht. × Wd. × Dp.		
Sensor	3 1/4″ × 2 1/4″ × 1 13/16″	39635K11	$120.00
Controller	1 1/2″ × 3 3/16″ × 2 1/2″	39635K22	99.95

Sling Psychrometers

Measure your relative humidity with these mercury-free psychrometers.

Psychrometer with 5″ thermometer has a built-in slide rule to help you determine relative humidity without complex tables. Relative humidity range is 10% to 100%; resolution is 1° F. Housing is ABS plastic. Includes one wick.

Psychrometer with 9″ thermometer has a relative humidity range of 10% to 99.9%; resolution is 0.1° F. Housing is Type 304 stainless steel. Includes relative humidity calculation table, 12 extra wicks, and an ABS plastic carrying case.

9 Inch

	Temp. Range		Each
With 5″ Thermometer	25° to 120° F	3980K7	$76.33
With 9″ Thermometer	20° to 120° F	3995K14	135.33

Replacement Parts

5″ Thermometer	3980K9	Each	$36.73
Wicks for 5″ Thermometer (4/Pkg.)	3980K8	Pkg.	23.27
Wicks for 9″ Thermometer (12/Pkg.)	3970K6	Pkg.	11.85

Hand-Held Psychrometer

Carry readings of temperature, relative humidity, and dew point in the palm of your hand. Temperature range is –4° to +122° F; accuracy is ±1.8° F. °F/°C selectable. Relative humidity range is 0% to 100%; accuracy is ±5%. Dew point range is –22° to +122° F. Has min./max. temperature memory and hold feature. Size is 6 11/16″ Ht. × 1 13/16″ Wd. × 1/2″ Dp. LCD digits are 1/4″ high. Housing is ABS plastic. Operates on two AAA batteries (included).

3823K31 ..... $121.10

Psychrometer

Get continuous wet and dry measurements so you can calculate your relative humidity. Also known as a mason's hygrometer, this psychrometer consists of two mercury-free thermometers with a wick and glass water bulb. Temperature range is 0° to 130° F; accuracy is ±2° F; resolution is 2° F. Relative humidity range is 14% to 96%. Case is polystyrene. Overall size is 10″ Ht. × 4″ Wd. × 1 3/16″ Dp. Psychrometer has one 3/16″ dia. hole for wall mounting (fastener not included). Comes with a relative humidity calculation table.

Psychrometer	3970K9	Each	$41.52
Repl. Wicks (12/Pkg.)	3970K6	Pkg.	$11.85

Wireless Remote Rain Gauge

Monitor rainfall without getting wet. The rain sensor is a bucket that uses radio signals to update the wireless display monitor up to 100 ft. away.

The rain sensor bucket is polypropylene and 8″ Dia. × 8″ Ht. It transmits rainfall data to the display monitor in 0.01″ increments. Meets National Weather Service specifications for statistical accuracy. Mounting screws included.

The digital display monitor has dual 1/2″ high LCDs that show current measurement of an individual rainfall (up to 9.99″) and accumulation measurement (up to 99.9″) over a period of time. Monitor is for indoor use only and includes mounting fasteners. Operates on five AA batteries (sold separately).

Monitor Rain Sensor

Wireless System	5729K5		$255.26
AA Battery	65605T72		.68

Plastic Tube Rain Gauges

Inch/mm *Inch*

Measure up to 5″ of rainfall with one of these easy-to-read clear gauges.

Inch/mm gauge has inch and mm (up to 127 mm) markings and a pointed base that you can drive into the ground. Made of polystyrene. Has two 5/16″ dia. holes for mounting to a post. Fasteners not included.

Inch gauge is marked in inches. Made of polycarbonate. Includes a mounting bracket with two 1/4″ dia. holes and fasteners for mounting.

Scale	O'all Lg.	Grads.		
Inch/mm	9 3/4″	0.1″/2 mm	3940K1	$3.59
Inch	11 7/8″	0.05″	3940K2	12.66

Desktop Multifunction Barometers

Get readings of temperature, relative humidity, atmospheric pressure, and time right on your desktop. Barometers graphically display a rolling 24-hour pressure trend as a weather forecast. Have an LCD with 1/2″ high digits. Displays are selectable for °F/°C and inches of mercury/millibars.

Temperature range is 32° to 131°F; accuracy is ±1.8°F. Relative humidity range is 25% to 95%; accuracy is ±5%. Barometric pressure range is 23.45″ to 31.01″ Hg; accuracy is ±0.15″ Hg. Have one 1/4″ dia. hole for wall mounting (fastener not included). Housing is black ABS plastic. Overall size is 7 1/4″ Ht. × 5 1/4″ Wd. × 1″ Dp. Operate on four AAA batteries (included).

Barometer with NIST Certificate conforms to NIST (National Institute of Standards and Technology) standards and includes a certificate of calibration traceable to NIST.

Standard	3964K41	$132.95
With NIST Certificate	3964K81	160.16

Hand-Held Storm Detector

Don't be blown away—receive alerts of storms up to 75 miles away. Track a storm's range, speed, and estimated time of arrival at your location. An alarm sounds and an alert is shown on the two-line LCD when a storm is within range. LCD digits are 1/4″ high. Housing is ABS plastic with a neoprene grip. Comes with a carrying case, a nylon belt pouch, and a wall/vehicle dash mount that has two 3/16″ dia. mounting holes (fasteners not included). Overall size is 6 7/16″ Ht. × 3 7/16″ Wd. × 1 1/2″ Dp. Operates on the included 9-volt battery or 120 VAC adapter.

2778K1	$661.76

Weather/Hazard Alert Radios

Benchtop with AM/FM Reception

Hand Held

Get up-to-the-minute local weather and hazard alerts. Radios use SAME (Specific Area Message Encoding) technology to sound an alert when weather and other emergencies threaten the counties you select. They receive information from seven NOAA (National Oceanic and Atmospheric Administration) channels and can display more than 60 different alert messages. Radios have siren, voice, and visual alert settings, as well as an LED display that indicates the degree of alert (statement, watch, or warning).

Benchtop radios have a 12-hour clock display, alarm, and snooze functions. Operate on 120 VAC with a 6-ft. cord and two-prong plug. In case of power loss, radios have emergency power backup.

Benchtop radio can be programmed for up to 25 counties. Emergency power backup operates on three AA batteries (not included). Overall size is 2″ Ht. × 5 1/8″ Wd. × 6 1/4″ Dp.

Benchtop radio with AM/FM reception can be programmed for up to 23 counties. Emergency power backup operates on four AA batteries (not included). Overall size is 2 1/2″ Ht. × 7″ Wd. × 5 1/2″ Dp.

Hand-held radio operates up to 50 miles away from the transmitter (depending on terrain). It can be programmed for up to nine counties and includes a digital clock. Overall size is 7″ Ht. × 3″ Wd. × 1 1/2″ Dp. Operates on three AA batteries (not included).

Benchtop Radio	3338K33	$60.58
Benchtop Radio with AM/FM Reception	3338K32	97.08
Hand-Held Radio	3338K31	62.38
AA Battery	65605T72	.68

Barometers

Dial

Digital

Use these barometers to monitor atmospheric pressure changes in both inches of mercury (Hg) and millibars (mB).

Dial and ***precision-dial*** barometers have a 4 3/4″ dia. face, a white dial, and are enclosed in a polished solid brass case with glass lens. Both include fasteners for wall mounting.

Digital barometer has a trend indicator to track pressure changes, an audible alarm, and an LCD with 1 3/8″ high digits. Housing is aluminum. Set on a desk or wall mount using the 1 1/16″ Ht. × 7 5/8″ Wd. slot on the back (fasteners not included). Size is 3″ Ht. × 7 13/16″ Wd. × 1 9/16″ Dp. Operates on one 9-volt battery (included).

	Pressure Range	Accuracy		
Dial	28″-31″ Hg	±0.1″ Hg	4109K3	$177.78
Precision Dial	27.5″-31.5″ Hg	±0.05″ Hg	4109K4	363.64
Digital	27″-31.5″ Hg	±0.05″ Hg	4109K5	198.89

Hand-Held Weather Meter

Check the weather anytime, anyplace. This pocket-sized weather meter measures temperature, relative humidity, and wind speed. With these measurements, it calculates heat index, dew point, and wind chill.

Temperature and dew point range is –20° to +158°F. °F/°C selectable. Heat index range is 70° to 130°F. Wind chill range is –50° to +50°F. Accuracy is ±1.8°F for temperature and wind chill and ±3.6°F for heat index and dew point. Wind speed range is 0.8-89 mph and can be displayed in km/hr, m/sec, fpm, Beaufort, and knots. Relative humidity range is 5% to 95%; accuracy is ±3%. Resolution is 0.1 for all except fpm and mph.

Meter has an LCD with 3/8″ high digits. Comes with a lanyard and a case. Housing is waterproof polycarbonate/ABS plastic and overall size is 4 13/16″ Ht. × 1 11/16″ Wd. × 11/16″ Dp. Operates on one CR2032 coin-cell battery (included).

6273K6	$192.00

Windsocks

Inlet

Complete Kit

Visually determine wind direction and approximate speed. Windsocks are made of bright orange nylon and have brass grommets. They slide over a round inlet frame and secure with the included mounting ties.

If you are replacing an existing windsock, you will need to determine the inlet diameter. To do this, lay the windsock flat and measure inlet (A) and multiply that height by 0.63.

	Approximate Wind Speed	
Sock Position	Low Velocity	High Velocity
At Rest	0-4 mph (0-3 knots)	0-7 mph (0-6 knots)
At 45°	4-8 mph (3-7 knots)	7-13 mph (6-11 knots)
At 60°	8-14 mph (8-14 knots)	14-20 mph (12-17 knots)
Straight	14-18 mph (12-16 knots)	21-29 mph (19-25 knots)

Low-Velocity Windsocks

Made of urethane-coated nylon, these windsocks react to the slightest wind movement. ***Complete kits*** include a windsock, ties, a round aluminum inlet frame, a 30″ long metal pole, and brackets to mount pole onto a flat vertical surface.

Diameter Inlet	Outlet	Lg.	Windsocks		Complete Kits	
8″	4″	36″	6491T42	$30.70	6491T12	$77.80
13″	6 1/2″	54″	6491T44	41.55	6491T14	98.71
18″	9 1/2″	60″	6491T46	50.33	6491T16	117.87
18″	13 1/4″	96″	6491T48	60.30	6491T18	129.29

High-Velocity Windsocks

Made of PVC-coated nylon, these windsocks react to stronger wind movement. ***Round aluminum inlet frames*** (sold separately) mount onto a 1 1/4″ NPT threaded pipe (sold separately; see page 60).

Diameter Inlet	Outlet	Lg.	Windsocks		Inlet Frame	
8″	4″	24″	3836K11	$28.57	3836K21	$59.52
10″	5″	30″	3836K12	34.52	3836K22	62.14

18″	9″	48″	3836K14	41.67	3836K24	76.62
24″	12″	96″	3836K15	51.19	3836K25	78.12
36″	18″	120″	3836K16	83.33	3836K26	155.08

Rugged-Service Weather Sensors and Displays

When long life with little maintenance is critical, rely on the same rugged weather equipment used by the National Weather Service. For a complete weather station, you'll need at least one sensor, a sensor cable, and either the Weather Data Center Display or one of the Real-Time Displays.

Sensors and Accessories

All mount on vertical 1″ pipe (1 3/8″ OD). Mounting hardware is included; pipe is not included. Connect to power using screw terminals.

(A) Temperature/Relative Humidity Sensor— Includes a shield that maintains accurate temperature readings by reducing sensor exposure to solar radiation and precipitation. Operates on 10-28 VDC. Output is 4-20 mA.

(B) Barometric Pressure Sensor— Operates on 7-30 VDC. Output is 4-20 mA. *Enclosure* (sold separately) is required. *Optional wind screen* reduces variance in measurements caused by wind gusts.

(C) Wind Speed/Wind Direction Sensor— Operates on 8-15 VDC. Output is pulse for wind speed and analog voltage for wind direction. *Optional line driver* converts the output into 4-20 mA for use with standard PLCs (programmable logic controllers).

(D) Rainfall Intensity Sensor— Does not require a power supply. Output is pulse.

	Sensor	Range	Accuracy	Sensors Each	Sensor Cables Per Ft.
A	Temperature/ Relative Humidity	–58° to +122° F 0% to 100%	±0.6° F ±2%	4975K37 $1,063.64	4975K44 $1.00
B	Barometric Pressure	14.8″ to 32.5″ Hg	±0.01″ Hg	4975K14 720.90	4975K35 .75
C	Wind Speed/ Wind Direction	0 to 134 mph 360°	±5% ±5°	4975K11 839.55	4975K35 .75
D	Rainfall Intensity	0 to 2 in./hr.	±3%	4975K13 521.64	4975K44 1.00

Enclosure for Barometric Pressure Sensor	4975K16	Each	$109.70
Optional Wind Screen for Barometric Pressure Sensor	4975K15	Each	$158.96
Optional Line Driver for Wind Speed/Wind Direction Sensor	4975K12	Each	$521.64
Sensor Cable for Optional Line Driver	4975K44	Per Ft.	$1.00

Weather Data Center Display (For Sensors A-D)

Presents live readings from up to eight sensors and logs more than two million readings for later upload to your PC using an RS-232 serial communication cable (sold separately). It can also be programmed to activate alarms on up to four readings. Resolution is 0.1° F for temperature, 1% for relative humidity, 0.01″ Hg for barometric pressure, 1 mph for wind speed, 1° for wind direction, and 0.01″ for rainfall. Display operates on 10-30 VDC or the included 115 VAC adapter with 6-ft. power cord and two-prong plug. Overall size is 5 11/16″ Ht. × 7 7/8″ Wd. × 2 1/8″ Dp.

Display	4975K3	$2,166.43
RS-232 Serial Communication Cable	4975K6	32.50

Real-Time Displays (For Sensors A&C)

Get accurate, real-time data from either the temperature/relative humidity sensor or wind speed/wind direction sensor. Alarms activate when your chosen thresholds are reached. Resolution is 0.1° F for temperature, 1% for relative humidity, 1 mph for wind speed, and 10° for wind direction. Displays can be linked in parallel to feed multiple displays from a single sensor. They operate on 12-30 VDC or the included 110 VAC adapter with 6-ft power cord and two-prong plug. Overall size is 5 11/16″ Ht. × 5 11/16″ Wd. × 1 7/16″ Dp.

Temperature/Relative Humidity Display	4975K33	$951.49
Wind Speed/Wind Direction Display	4975K4	982.84

Rugged-Service Wireless Weather Station

This wireless station stands up to extreme weather conditions. Station comes with a durable sensor and an indoor receiver. The sensor measures temperature, relative humidity, barometric pressure, wind speed/direction, rainfall, wind chill, and dew point. Output from the sensor is wirelessly transmitted to the receiver using a 2.4 GHz radio signal (transmits up to one mile unobstructed). Measurements update every two seconds. Receiver connects to your PC with the included RS-232 serial communication cable and comes with software that allows you to customize the display and track real-time data. (A PC with Windows 2000 or newer and a CD-ROM drive is required.) Stores up to three months of data.

Mount sensor to a roof or exterior wall (bracket included). Sensor is 51″ tall when mounted. It runs on a solar-powered battery system that can operate up to 25 days without sunlight. The receiver runs on a 9-volt DC wall transformer and has an 8-hour battery backup, which requires 6 AA NiCAD batteries (not included).

Optional display console lets you see all measurements and records minimum and maximum values for temperature, relative humidity, barometric pressure, wind speed, and dew point. Display size is 13″ Lg. × 6 7/8″ Ht. Comes in a wood frame. Place it on a flat surface or mount it to a wall. Display runs on a 9-volt wall transformer and has a 20-hour battery backup, which requires 5 AAA batteries (not included).

Wireless Weather Station

Optional Display Console

Sensor	Range	Accuracy	Resolution
Temperature	–66° to +166° F	±0.5° F	0.1° F
Relative Humidity	0% to 100%	±2%	1%
Barometric Pressure	16.3″ to 32″ Hg	±0.05″ Hg	0.01″ Hg
Wind Speed	0 to 150 mph	±3 mph	1 mph
Wind Direction	360°	±22.5°	22.5°
Rainfall Total	Unlimited	±2%	0.01″

Rugged-Service Wireless Weather Station	1470K1	$1,415.41
Optional Display Console	1470K2	486.89

Wireless Weather Station

Monitor weather conditions without a tangled mess of wires. Station consists of an indoor console and an outdoor sensor unit. The console has a touch-screen monitor and built-in sensors that measure indoor temperature and humidity. The outdoor sensor unit measures outdoor temperature, relative humidity, wind speed/wind direction, rainfall rate/rainfall total, barometric pressure, heat index, wind chill, and dew point. Output from the outdoor sensor is wirelessly transmitted to the console using a 928 MHz radio signal (transmits up to 1,000 feet unobstructed). Humidity and temperature update every 1 minute, wind speed/wind direction update every 2 to 3 seconds, and rainfall updates every 24 seconds.

Place the console on a desk or mount it to a wall. The outdoor sensor mounts on a vertical 1″ to 1 3/4″ pipe (not included) or to a flat vertical surface. Console operates on the included 120 VAC adapter with 10-ft. cord and two-prong plug or three C batteries (not included). Outdoor sensor is solar powered and comes with a CR123 lithium battery backup.

Outdoor Sensor Unit

Console

Sensor	Range	Accuracy	Resolution
Indoor Temperature	32° to 140° F	±1° F	0.1° F
Indoor Relative Humidity	0% to 90%	±3%	1%
Outdoor Temperature	–40° to +150° F	±2° F	0.1° F
Outdoor Relative Humidity	0% to 90%	±3%	1%
Wind Speed	2 to 150 mph	±5%	1 mph
Wind Direction	360°	±3°	22.5°
Rainfall Rate	0.04 to 96 in. per hr.	±5%	0.01″
Rainfall Total	0″ to 200″	±4%	0.01″
Barometric Pressure	16″ to 32.5″ Hg	±0.03″ Hg	0.01″ Hg

Wireless Weather Station	3011K38	$489.04

Water-Quality Test Kits

Want on-the-spot results when testing for specific substances in water? These color-comparison kits contain all the necessary chemicals and labware you'll need.

Boiler/Cooling Tower Combination Test Kit— Includes approximately 100 tests for alkalinity (phenolthalein and total; 0-100/0-300 ppm), chloride (0-100/0-1,000 ppm), dissolved oxygen (0.0-10.0 ppm), hardness (total; 0.0-30.0/0-300 ppm), and sulfite (0.0-20.0/0-200 ppm), and 50 tests for phosphate (0-5 ppm).

Also Available: Refill chemicals, except tests for arsenic, bacteria, and lead. Please ask for 1439T31 and specify test type required.

Test For	No. of Tests		
Alkalinity (Total; 0-200 ppm)	50	1439T15	$36.49
Arsenic (0.002-0.030 ppm)	2	1450T2	26.47
Bacteria (1 colony per 100 ml water)	1	1439T12	4.55
Chloride (0-200/0-20,000 ppm) ♦	50	1439T17	47.35
Chlorine (Free and Total; 0.2-3.0 ppm)	50	1439T8	68.13
Dissolved Oxygen (0-10 ppm)	50	1439T13	54.49
Hardness (Total; 0-200 ppm)	50	1439T19	60.27
Iron (0.5-10 ppm)	90	1439T23	60.87
Lead (0.015 ppm)	2	5829T61	26.18
Molybdate (1-10 ppm)	100	1439T33	71.13
Nitrate Nitrogen (0.25-10.0 ppm)	40	1439T22	76.31
Phosphate (1.0-10.0/10-100 ppm) ♦	50	1439T21	94.85
pH (3-10.5 pH)	100	1439T2	41.45
Boiler/Cooling Tower Combination Test Kit		1439T11	302.07

♦ The second range given is the range reached through dilution.

Water-Quality Test Strips

Here's a quick, easy, and reliable way to test water conditions. Simply dip one test strip into a water-based solution—the strip will change color to indicate the value reached. Just match the color of the strip to the color chart on the bottle for your results.

5-in-1 Test Strips— Test five water-quality measurements on one strip.
Note: gpg = grains per gallon.

Test For	No. of Strips		
Alkalinity (Total; 0-240 ppm)	50	11235T51	$10.72
Chloride (0.005-0.1%; 30-600 ppm)	40	11235T59	42.02
Chlorine (Free and Total; 0-10 ppm)	50	11235T53	15.37
Chlorine (Free; 0-800 ppm)	50	11235T31	20.40
Copper (0-3 ppm)	25	11235T55	20.13
Hardness (Total; 0-25 gpg)	50	11235T41	10.72
Hardness (Total; 0-180 ppm)	50	11235T32	12.00
Hydrogen Peroxide (0-90 ppm)	25	11235T33	10.29
Iron (0-5 ppm)	25	11235T42	20.13
Molybdenum (0-5 ppm)	50	11235T34	52.86
Nitrate (0-50 ppm)/Nitrite (0-3 ppm)	25/25	11235T45	18.40
Peracetic Acid (0-160 ppm)	50	11235T35	11.37
pH (4-9 pH)	50	11235T57	10.72
Salinity (0-150% concentration)	50	11235T38	16.84
5-in-1 Test Strips— Alkalinity (Total; 0-240 ppm), Chlorine (Free and Total; 0-10 ppm), Hardness (Total; 0-25 gpg), pH (6.2-8.4 pH)	50	11235T47	16.57

Lead-Check Swabs

Perfect for checking painted surfaces for lead. Rub a swab on any surface to detect lead (down to 2 micrograms).

Liquid Samplers

T-Handle Sampler

Collect noncorrosive liquid samples from drums, vats, and tanks. All are plastic. ***Cleaned samplers*** are packaged to meet EPA protocol B.

Open-Top Samplers— Also known as thief samplers. Create a vacuum by using your thumb to seal the top opening to collect a sample.

T-Handle Samplers— Also known as coliwasa (composite liquid waste) samplers. Use the T-handle to open and close the plug at the bottom to collect a sample.

pH Testing Paper Rolls

Single Range

Also known as litmus paper, this pH testing paper changes color to indicate pH value. Apply water-based solution to paper or dip paper into your sample. Simply match the color of the testing paper to the color chart on the dispenser to determine pH value.

Single-Range Testing Paper Rolls— 1/2″ Wd. × 50-ft. Lg. Rolls

Range	Color Points	Increments	Paper Rolls with Dispenser		Refill Roll	
0 -13.0	14	1	1434T31	$12.11	1434T41	$11.31
1.0- 2.5	4	0.5	1434T14	12.11	1434T24	11.31

pH Testing Paper Roll Assortment

Includes seven 1/2″ Wd. × 50-ft. Lg. rolls of pH testing paper, one each of the following ranges: 0.0-13.0, 1.0-2.5, 3.0-5.5, 6.0-8.0, 8.0-9.5, 10.0-12.0, and 12.5-14.0. Each roll comes in its own dispenser.

1434T3 ..... $85.75

Hydrometers

Use readings from these hydrometers to calculate the concentration of your solutions. Made of thick-walled glass tubing, all hydrometers are calibrated at 60° F test liquid/60° F water. Length is 12″. Overall dia. for wide-scale hydrometers (except 4099K17) is 9/16″. For 4099K17 and fine-scale hydrometers, dia. is 11/16″.

Specific gravity is the ratio of the density of the test liquid at 60° F to the density of water at 60° F.

Scale	Range	Grads.		
Wide-Scale Hydrometers				
For Light Liquids— *Specific Gravity < 1*				
Specific Gravity	0.650 to 1.000	0.005	4099K16	$15.72
Specific Gravity/ Baume	0.600 to 1.000/ 10° to 100°	0.005/ 1°	4099K24	15.72
For Heavy Liquids— *Specific Gravity > 1*				
Specific Gravity	1.000 to 2.000	0.010	4099K14	15.72
Baume	0° to 50°	1°	4099K11	15.72
Baume	0° to 70°	1°	4099K13	15.72
Specific Gravity/ Baume	1.000 to 2.000/ 0° to 72°	0.010/ 1°	4099K23	15.72
For Salt Water				
Saturation	0 to 100%	1%	4099K17	15.72
Fine-Scale Hydrometers				
For Light Liquids— *Specific Gravity < 1*				
Specific Gravity	0.700 to 0.810	0.001	38865K11	15.72
Specific Gravity	0.800 to 0.910	0.001	38865K12	15.72
Specific Gravity	0.900 to 1.000	0.001	38865K13	15.72
For Heavy Liquids— *Specific Gravity > 1*				
Specific Gravity	1.000 to 1.220	0.002	38865K14	15.72
Specific Gravity	1.200 to 1.420	0.002	38865K15	15.72
Specific Gravity	1.600 to 1.820	0.002	38865K17	15.72

For a specification sheet with additional information for the meters on this page such as resolution and dimensions, go to mcmaster.com and search for the part number.

pH, ORP, Conductivity, TDS, and Dissolved Oxygen Meters

Quick and handy tools for on-the-go measurement, these water chemistry meters are splash-resistant and protected against dust, unless noted. All have automatic temperature compensation (ATC), unless noted. Automatic temperature compensation adjusts readings to correct for temperature variation. Readings are standardized to 77° F. Batteries are included. CE approved, unless noted.

Note: To maintain the accuracy of these meters, use calibrating solutions on page 614.

● Not CE approved. Not splash-resistant or dust proof. ★ Includes calibrating pH buffer solutions. ▲ Does not have ATC.

Multifunction pH, ORP, Conductivity, TDS, and Salinity Meters

Get the convenience of multiple water chemistry measurements from a single meter. All have automatic temperature compensation (ATC), which adjusts readings to correct for temperature variation. Readings are standardized to 77° F. Batteries are included. CE approved.

Meters with *pH* and *oxidation reduction potential (ORP)* functions are for clean liquids.

Style G are rated IP57 (protection against dust and water submersion). 14345T75 has PC output.

Style J are rated NEMA 6 (for occasional submersion) and IP67 (dust-proof and protection against water submersion). They also measure resistivity from 10 kilohms to 30 megohms with ±1% accuracy and have a memory function.

Note: To maintain the accuracy of these meters, use calibrating solutions on page 614.

	Range	Accuracy	ATC Range		
Multifunction Meters					
G .. pH	0 to 14 pH	±0.01 pH			
Oxidation Reduction Potential (ORP)	–999 to +999 mV	±4 mV			
Chlorine	0.01 to 10 ppm	±1.55 ppm	32° to 194° F	1160T11	$241.35
G .. Conductivity	0 to1,999 µS	±2%

Bench-Top pH, Conductivity, and TDS Meters

1128T137

Spot trends and variations in pH, conductivity, and total dissolved solids (TDS) measurements with these easy-to-read analog meters. All meters have automatic temperature compensation (ATC), which adjusts readings to correct for temperature variation. Readings in the range of 50° to 160° F (unless noted) are standardized to 77° F. Batteries are included.

13485T64 for pH and conductivity is for use with clean liquids.

Note: To maintain the accuracy of these meters, use calibrating solutions on page 614.

ⓘ For a specification sheet with additional information such as meter dimensions, go to mcmaster.com and search for the part number.

Function	Range	Accuracy

★ ATC range is 50° to 120° F; readings are standardized to 77° F.

pH and ORP Sensors

Hand Held

With NPT Connection

Bayonet Connection

Replace your pH or oxidation reduction potential (ORP) sensor with one of these sensors. All sensors have a bayonet connection, which is the common connection to meters and controllers with a remote sensor. pH sensors have a range of 0 to 14 pH. ORP sensors have a range of –1,999 to +1,999 mV. Temperature range is 32° to 176° F.

Sensors with automatic temperature compensation (ATC) adjust readings to correct for temperature variation. Readings within the temperature range are standardized to 77° F.

Flat-tip pH sensors are more resistant to breakage.

Hand Held— These sealed glass sensors are for use with clean liquids, except the ORP sensor, which is for use with dirty liquids. **To Order:** Please specify cable length: 3, 10, or 20 feet.

With NPT Connection— Have a ¾″ NPT male connection for incorporation in your process. All are for use with dirty liquids. **To Order:** Please specify cable length: 10 or 20 feet.

Function	Hand Held		With NPT Connection	
pH	14775T21	$65.44	14775T91	$154.50
pH with ATC	14775T22	96.34	14775T92	199.83
Flat-Tip pH	14775T23	80.98	14775T93	154.76
Flat-Tip pH with ATC	14775T24	125.83	14775T94	206.18
ORP	14775T25	113.96	14775T95	225.21

Easy-Mount pH, ORP, and Conductivity Controllers

Controllers compare the input from your sensor to your programmed actuation point and have relays and a common 4-20 mA output to control a pump, mixer, valve, or other process mechanism.

Multifunction Panel-Mount Controllers

Controllers accept pH and oxidation reduction potential (ORP) sensors (not included; see 14775T above) that have a bayonet connection. A switch on these controllers allows you to select between pH and ORP measurement. All have automatic temperature compensation, which adjusts readings to correct for temperature variation. Readings in the range of 32° to 212° F are standardized to 77° F. Controllers have a ¼ DIN thermoplastic housing.

Controllers have one control and two alarm relays. Relays are single pole, double throw (SPDT) and can be set to turn one circuit from "off" to "on" (normally open) or from "on" to "off" (normally closed). Relays have a max. load of 5 amps at 115 VAC.

Controller with LED display is better for low-light conditions.

Function	Range	Resolution	Accuracy
pH	0 to 14 pH	0.01 pH	±0.01 pH
ORP	–1,999 to +1,999 mV	1.0 mV	±0.1%

Display	O'all Size, Ht. × Wd. × Dp.	VAC @ 50/60 Hz		
LCD	3 13/16″ × 3 13/16″ × 4 11/16″	115/230	11305T44	$327.98
LED	3 13/16″ × 3 13/16″ × 4 11/16″	115/230	11305T66	327.98

Wall-Mount Controllers and Sensors

Pair these controllers with sensors (sold separately below) to control pH or conductivity. All have automatic temperature compensation, which adjusts readings to correct for temperature variation. Readings in the range of 32° to 132° F are standardized to 77° F. Controllers have an ABS plastic housing and four 3/16″ dia. mounting holes (fasteners not included).

Controllers have one control and one alarm relay. Relays are single pole, single throw (SPST) and can be set to turn one circuit from "off" to "on" (normally open). Relays have a max. load of 2 amps at 240 VAC.

Function	Range	Resolution	Accuracy	O'all Size, Ht. × Wd. × Dp.	VAC @ 50/60 Hz		
pH	0 to 14 pH	0.01 pH	±0.02 pH	7 1/8″ × 8 11/16″ × 3 7/16″	110/115	13915T45	$596.79

Conductivity	0 to 10 mS	0.01 mS	±2%	7 1/8″ × 8 11/16″ × 3 7/16″	220/240	13915T19	602.14

Sensors— For use with wall-mount controllers above. Both have a process connection and a 10-ft. cable for remote readings.

pH sensor is for use with clean liquids. It has a ¾″ UNF process connection.

Conductivity sensor has a ½″ NPT male process connection.

Sensor For		
pH	13915T24	$130.71
Conductivity	13915T27	171.43

Refractometers

Eyepiece Refractometer

Digital Refractometer

Use two or three drops of your sample to measure concentrations in water-based solutions. All come in a plastic case. *Refractometers with automatic temperature compensation (ATC)* adjust readings to correct for temperature variation. Readings within the temperature range are standardized to 77° F.

Eyepiece Refractometers— Look through the eyepiece to see your results. Body is aluminum (unless noted).

With Brix (sugar) scale measure cutting/grinding coolants, oil/water concentrations, cleaning solutions, anodizing solutions, plating/acid baths, and chromating solutions.

Eyepiece refractometers with automatic temperature compensation have a range of 50° to 86° F.

With freezing-point scale measure antifreeze and battery fluid. They measure the freezing-point of propylene glycol and ethylene glycol as well as the specific gravities of battery acids from 1.15 to 1.30.

Digital Pocket Refractometers— Read your results on the LCD. ATC range is 50° to 167° F. Meters comply with HACCP (Hazard Analysis Critical Control Points) standards for use in food applications. All have a plastic body.

About Choosing the Right Heater

There are several factors to consider when choosing a heater: the power source, the type of heat transfer that best suits your environment, and the heat output measured in watts or Btu/hr.

Power Source— Determine the available source: electric, gas, oil, hot water, or steam.

Heat Transfer— Forced-air, convection, or radiant heat.

Forced-air heaters use the force of a fan to distribute heat quickly for instant relief from the cold. If properly arranged for maximum circulation, they can also be used to heat an entire warehouse. Forced-air heaters also cool off quickly. Best suited for well-insulated areas and to quickly restore heat to an area that gets occasional exposure to the outdoors.

Convection heaters offer excellent circulation and produce even warmth. Initial warm-up is gradual; however, they continue circulating warm air long after they're turned off. Ideal for maintaining even heat levels in areas that are well insulated and have few drafts.

Radiant heaters transmit heat waves through the air, warming objects and people in their path instead of warming the air. They are excellent for spot heating, and if properly arranged, they can also be used to heat an entire warehouse. Unaffected by drafts, they are good for heating open areas such as loading docks.

Heat Output Required— A heater should be large enough to replace the heat lost through the floor, walls, and ceiling of the space you are trying to heat. The amount of heat lost depends on how well an area is sealed and insulated. You may need to consider more than one heater to meet your total requirement.

Follow these steps to estimate your heat requirement:

For Forced-Air and Convection Heaters

Step 1: Determine the volume of space to be heated in cubic ft. (Lg.×Wd.×Ht.).

Step 2: Estimate your heat loss factor by choosing the description that best fits your building:
- Very well sealed and insulated = 0.25
- Well sealed, but not insulated = 0.75
- Not well sealed or insulated = 1.25

Step 3: Decide how much you want the temperature to rise in °F: If you don't currently have interior heat, this would be the difference between the outside temperature and your desired temperature. If adding to existing heat, this would be the difference between your current temperature and your desired temperature.

Step 4: Multiply the results from Steps 1-3 for your estimated Btu/hr. requirement.

Step 5: If you are sizing an electric heater by watts, multiply the result in Step 4 by 0.293.

For Radiant Heaters

Step 1: Determine the area to be heated in sq. ft. (Lg.×Wd.).

Step 2: Determine the heating environment factor:
- General building heating = 0.5
- Indoor spot heating = 1
- Outdoor spot heating = 2

Step 3: Decide how much you want the temperature to rise in °F. (See Step 3 above.)

Step 4: Multiply the results from Steps 1-3 for watts.

Step 5: Divide the result in Step 4 by 0.293 for your estimated Btu/hr. requirement.

Portable Electric Heaters

Light Duty Small-Area Forced-Air Heater

Easily move to areas that need quick spot heating. Heater has two heat levels, a built-in thermostat that adjusts from 42° to 95°F, and a tip-over switch that shuts off the unit if it falls over. Housing is made of steel and aluminum. Operates on 60 Hz and has a 6-ft. cord with two-prong plug. ETL listed.

Volts	Phase	Watts	Btu/Hr.	Amps	Ht.×Wd.×Dp.		
120 VAC	Single	1,500	5,100	12.5	15″×10⅝″×8 11/16″	**1810K7**	$54.17

Light Duty Under-Desk Radiant Heater

Provide warmth to anyone sitting at a desk, counter, or table. Heater has a fiberglass heating element and an on/off switch. Housing is off-white steel and includes a stand. You can also mount the heater using the included hook and loop tape. Operates on 60 Hz and has a 6-ft. cord with three-prong plug. UL listed.

Optional thermostat adjusts from 40° to 100° F and has a 6-ft. cord with three-prong plug. Mounts with included hook and loop tape. Operates on 120 VAC, 60 Hz and is rated for 10 amps.

Volts	Phase	Watts	Btu/Hr.	Amps	Ht.×Wd.×Dp.		
120 VAC	Single	170	580	1.4	15″×22″×1″	**1733K11**	$98.65
Optional Thermostat						**1733K21**	68.40

Multi-Mount Forced-Air Heater

Ceiling-Mount Position

NEMA 6-30 Plug

The versatile bracket can be used as a floor stand or to mount heater to the wall or ceiling. It has four 5/16″ dia. mounting holes (fasteners not included). Heater has a built-in thermostat that adjusts from 35° to 85°F, an overheat safety shutoff, and a steel heating element. Housing is made of steel. Operates on 60 Hz and has a 6-ft. cord with NEMA 6-30 plug. UL and C-UL listed.

Note: When operating on 208 VAC, heat output (Btu/hr.) and watts are reduced by 25%.

Volts	Phase	Watts	Btu/Hr.	cfm	Amps	Ht.×Wd.×Dp.		
208/240 VAC	Single	5,600	19,107	262	23.4	17½″×13½″×11½″	**3688K72**	$258.93

DC Mini Forced-Air Heaters

Don't shiver in slow-to-warm vehicles. Hardwire these compact units to your battery using the three 1½″ long leads. Heaters have a quartz tube heating element, built-in thermostat that adjusts from –31° to +155°F, remote on/off switch, overheat safety shutoff, and fuse. Housing is black ABS plastic. Heaters come with a multimount bracket that allows for floor or wall mounting (fasteners included).

Volts	Watts	Btu/Hr.	cfm	Amps	Ht.×Wd.×Dp.		
12 VDC	300	1,100	102	25	8¼″×7¾″×5¼″	**17075K71**	$119.70
24 VDC	600	2,200	102	25	8¼″×7¾″×5¼″	**17075K81**	196.00

For information about choosing a heater, see page 618.

High-Output Portable Forced-Air Heaters

A high-output steel heating element combined with a powerful fan result in superior heat coverage for your indoor applications. These heaters pivot to direct warmth where it's needed and have a black powder-coated steel stand with two wheels for mobility. They're intended for work environments with ceiling heights of less than 15 ft. 10,000-watt heater is for areas smaller than 1,000 sq. ft.; 15,000-watt heaters are for areas smaller than 1,500 sq. ft.; and 30,000-watt heater is for areas smaller than 2,000 sq. ft. All have a thermostat that adjusts from 40° to 100° F and an overheat safety shutoff. Housing is yellow steel. Operate on 50/60 Hz. UL and C-UL listed.

Power cords are 25 ft. long and are furnished with ring terminals. Plugs are sold separately on pages 787-789.

Volts	Phase	Watts	Btu/Hr.	cfm	Amps	Ht. × Wd. × Dp.	Heaters		Power Cord (Without Plug)	
208 VAC	Three	15,000	51,195	800	42	40″ × 27″ × 21″	1714K42	$826.09	1714K93	$179.37
240 VAC	Single	10,000	34,130	800	42	40″ × 27″ × 21″	1714K19 ♦	838.24	—	—
240 VAC	Three	15,000	51,195	800	36	40″ × 27″ × 21″	1714K12	826.09	1714K93	179.37
480 VAC	Three	15,000	51,195	800	18	40″ × 27″ × 21″	1714K22	826.09	1714K92	80.95
480 VAC	Three	30,000	102,390	1,100	36	40″ × 27″ × 23″	1714K32	1,276.60	1714K93	179.37

♦ Includes a 10-ft. cord with NEMA 14-50 plug.

Indoor/Outdoor Portable Radiant Heaters

For convenient spot heating of indoor and dry outdoor environments, choose these efficient radiant heaters. They have aluminum reflectors and a safety screen to protect the heating element from damage. Element is made of nickel chromium and has a corrosion-resistant nickel alloy sheath. All heaters operate on 50/60 Hz.

Stand-mounted heaters have three 6″ wire leads, unless noted.

Wheel-mounted heaters are attached to a hand cart with two wheels. They have four 6″ wire leads and can be rewired for single-phase operation, except 1747K52.

Power cords are 25 ft. long and furnished with ring terminals. Plugs are sold separately on pages 787-789.

Optional wall-mount thermostat adjusts from 40° to 110° F. It's single pole, double throw (SPDT) and has three 6″ wire leads and four 5/16″ dia. mounting holes (fasteners not included). Operates on 120/277 VAC and is rated for 22 amps. UL listed. For 480 VAC heaters or heaters 6,000 watts or greater, a contactor is required to work between the heater and thermostat; see pages 902-904.

■ Has a 15-ft. cord with three-prong plug instead of wire leads.

Portable Ceiling-Mount Radiant Heaters

Complete with all the necessary hardware, these heaters mount easily to the ceiling for indoor spot heating. The quartz tube heating element provides more efficient radiant heating than sheathed elements. Mount heaters a minimum of 3″ from the ceiling using the two 2-ft. long suspension chains and S-hooks. All operate on 50/60 Hz. UL listed.

1751K11 has a steel housing, two quartz tubes with independent switches, and an 8-ft. cord with three-prong plug. Recommended mounting height is 6 to 8 ft.

1896K58 and 1896K59 are rated for outdoor use (when sheltered from the elements) and have a galvanized steel housing, one quartz tube, and a 6-ft. cord. C-UL listed. 1896K58 has a three-prong plug. Recommended mounting height is 7 to 9 ft. 1896K59 has a NEMA 6-15 plug. Recommended mounting height is 8 to 10 ft.

Optional wall-mount thermostat adjusts from 40° to 110° F. It has a single pole, double throw (SPDT) switch, three 6″ wire leads, and four 5/16″ dia. mounting holes (fasteners not included). Operates on 120/277 VAC and is rated for 22 amps. UL listed.

1751K11

Permanent-Mount Electric Heaters

For information about choosing a heater, see page 618.

Compact Forced-Air Heaters

Low-profile design allows permanent, horizontal mounting under counters, in soffits, and in other recessed locations. Heaters are wired for 1,500 watts (can be field-wired for 750 watts) and have two 6″ wire leads and a thermostat that adjusts from 45° to 80° F. Heating element is nickel chromium; housing is galvanized steel with a white grille. Heaters require a 3⅝″ Ht. × 14¼″ Wd. × 9″ Dp. opening for installation and include two mounting fasteners. Operate on 50/60 Hz. UL listed.

120 VAC heater is single pole, single throw (SPST).

208/240 VAC heater is double pole, single throw (DPST). *Note:* When operating on 208 VAC, the heat output (Btu/hr.) and watts are reduced by 25%.

Volts	Phase	Watts	Btu/Hr.	cfm	Amps	Ht. × Wd. × Dp.		
120 VAC	Single	1,500/750	5,120/2,560	70	12.5	3½″ × 14½″ × 8″	17045K72	$187.89

Compact Stainless Steel Radiant Heaters

Perfect for tight indoor spaces, these heaters mount vertically or horizontally. Housing, grille, and heating element are made of Type 304 stainless steel for excellent corrosion resistance. Heaters have a built-in thermostat that adjusts from 40° to 90° F and two 6″ wire leads. Operate on 50/60 Hz. The included mounting bracket has four 3/16″ holes (fasteners not included).

Note: When 208/240 VAC heaters operate on 208 VAC, heat output (Btu/hr.) and watts are reduced by 25%.

				120 VAC			208/240 VAC		
Watts	Phase	Btu/Hr.	Ht. × Wd. × Dp.	Amps			Amps

1,000	Single	3,413	17″ × 6¼″ × 3⅝″	8.3	1991K67	161.92	4.2	1991K77	161.92

Baseboard Convection Heaters

Analog Thermostat

Single Receptacle

Adapt these heaters to your installation needs by using the indentations to punch your own mounting holes. They have a steel housing and heating element, six 6″ wire leads, and an overheat safety shutoff. Housing has an almond finish. Operate on 60 Hz. UL listed. All require a thermostat (sold separately).

Note: When 208/240 VAC heaters operate on 208 VAC, heat output (Btu/hr.) and watts are reduced by 25%.

Analog heater-mount thermostats adjust from 45° to 90° F and are rated for 22 amps. *120 VAC* is single pole, single throw (SPST) and has two 6″ wire leads. *208/240 VAC* is double pole, single throw (DPST) and has four 6″ wire leads.

Digital heater-mount thermostat adjusts from 41° to 85° F and has four 6″ wire leads. You can program up to four daily temperature changes. It's double pole, single throw (DPST) and is rated for 12.6 amps.

Heater-mount single receptacle allows you to safely add an outlet to your 120 VAC heater. It has one three-prong outlet, three screw terminals, and one 1/8″ dia. mounting hole (fastener not included). Rated for 120 VAC, 60 Hz, and 15 amps.

				120 VAC			208/240 VAC

Wall-Mount Forced-Air Heaters

Flush Mount

Surface Mount with Optional Mounting Frame

Choose your own installation method: cut a hole in a wall to flush mount or use a mounting frame (sold separately) to surface mount. Heaters have a built-in adjustable thermostat with overheat safety shutoff and two 8″ wire leads. All except 1726K28 come set at the highest wattage and can be field-wired to a lower wattage. Heating element is nickel chromium; housing is steel with an off-white finish. Operate on 60 Hz. UL listed.

1726K24 and ***K26*** have a thermostat temperature range of 40° to 85° F. 1726K853***, K28,*** and ***K832*** have a thermostat temperature range of 40° to 90° F.

Optional mounting frames have two 3/16″ × ½″ mounting slots (fasteners not included).

■ When operating on the lower voltage, heat output (Btu/hr.) and watts are reduced by 25%.

For information about choosing a heater, see page 618.

High-Output Forced-Air Heaters

Deliver maximum heat circulation to large areas. These heaters have an overheat safety shutoff and a terminal block with box lug connections. Cabinet is steel with adjustable louvers. Heating element is also steel. Operate on 60 Hz.

Horizontal-mount heaters require a *thermostat* (sold separately). ETL listed.

Multi-mount heaters mount horizontally or vertically using the brackets sold separately below. Horizontal air flow provides maximum circulation; vertical air flow provides effective spot heating. The fan is centered in the heating coils for even air warming. Fan override circuit turns fan off after the element so that all heat can be discharged from the heater. For better heat regulation, use an optional thermostat (sold separately). UL listed. 2022K11, *K12,* and *K13* can be field-wired to three phase.

5,000- to *20,000-watt* heaters have a single-speed motor. *25,000-* to *50,000-watt* heaters have a two-speed motor.

▲ SPST = single pole, single throw. DPST = double pole, single throw.

Mounting Brackets for Horizontal-Mount Heaters

Mount heater at any angle up to 45° from horizontal. Fasteners not included. Use one bracket per heater.

For Heaters	Hole Dia. (Qty.)		
5,000 to 15,000 watt	11/32″ (4)	1702K61	$42.78
20,000 to 30,000 watt	11/32″ (4)	1702K58	52.25
40,000 to 48,000 watt	11/32″ (4)	1702K59	71.11

Mounting Brackets for Multi-Mount Heater

Fasteners not included. Use one bracket per heater.

For Heaters	Horizontal Mount Hole Dia. (Qty.)			Vertical Mount Hole Dia. (Qty.)		
5,000 watt	3/8″ (4)	2022K31	$58.00	17/32″ (14)	2022K34	$118.50

25,000 to 50,000 watt	3/8″ (4)	2022K33	84.00	17/32″ (22)	2022K36	160.89

Hazardous-Location Convection Heaters

These heaters meet NEC Class 1, Div. 1 and 2, Groups B, C, and D for use in hazardous locations. Cabinet is gray steel and rated NEMA 4 for indoor use and exposure to splashing liquids. Heaters have a stainless steel element, two 6″ wire leads, and a wall mounting bracket with four 13/32″ dia. holes (fasteners not included). Operate on 50/60 Hz. UL listed.

Optional wall-mount thermostat adjusts from 50° to 90° F and is double pole, double throw (DPDT). It has two 3/4″ NPT female conduit connections and two 1/4″ dia. mounting holes (fasteners not included). For 480 VAC or 22 amps and greater, a contactor is required to work between the heater and thermostat; see pages 902-904. Contactors must be located outside the hazardous location.

Watts	Phase	Btu/Hr.	Ht.×Wd.×Dp.	120 VAC Amps			208 VAC Amps			240 VAC Amps			480 VAC Amps		
1,800	Single	6,143	18″×34″×9″	15.0	1752K71	$868.97	8.7	1752K72	$868.97	7.5	1752K73	$854.24	—	—	—

Optional Wall-Mount Thermostat 1877K25 $218.00

High-Output Hazardous-Location Forced-Air Heaters

The liquid-filled heat exchangers are sealed to meet NEC Class 1, Div. 1 and 2, Groups C and D; and Class II, Div. 1 and 2, Groups E, F, and G. Heaters have a steel cabinet with adjustable louvers, a nickel chromium alloy heating element, an overheat safety shutoff, and pressure relief valves. Operate on 60 Hz and have a terminal block with box lug connections.

Mounting brackets have eight 3/8″ dia. holes for wall mounting (fasteners not included). Use one bracket per heater.

Optional wall-mount thermostat adjusts from 50° to 90° F and is single pole, double throw (SPDT). It has two 3/4″ NPT female conduit connections and two 1/4″ dia. mounting holes (fasteners not included). Operates on 24 to 277 VAC and is rated for 22 amps.

Watts	Phase	Btu/Hr.	cfm	Ht.×Wd.×Dp.	240 VAC Heaters Amps			480 VAC Heaters Amps			Mounting Bracket	
7,500	Three	25,600	580	17¾″×22⅜″×19¾″	19.4	1799K15	$3,995.33	9.7	1799K16	$3,995.33	1799K34	$207.41

Optional Wall-Mount Thermostat 1877K23 $219.15

For information about choosing a heater, see page 618.

Washdown Forced-Air Heaters

Wiring compartment is sealed to NEMA 4X standards, making these heaters ideal for areas requiring periodic washdown. Motor is totally enclosed and has an overheat safety shutoff. Cabinet is Type 304 stainless steel with adjustable louvers. Heating element is nickel-copper alloy. All units have screw-terminal connections and operate on 50/60 Hz. UL listed.

Note: When 208/240 VAC heaters operate on 208 VAC, heat output (Btu/hr.) and watts are reduced by 25%.

Mounting brackets are for wall or ceiling use and have four ½″ dia. mounting holes (fasteners not included). Use one bracket per heater.

Optional wall-mount thermostat adjusts from 40° to 100° F and is single pole, double throw (SPDT). It has four 6″ wire leads and four 3/16″ dia. mounting holes (fasteners not included). NEMA 4X rated for exposure to splashing liquids and corrosive agents. Operates on 120 to 277 VAC and is rated for 25 amps.

Optional Wall-Mount Thermostat 19625K71 $125.77

Enclosure Heaters

Protect sensitive electrical equipment from low temperatures, condensation, and corrosion.

Surface-mount heaters have terminals for hardwiring and mount inside enclosures using the included fasteners. They have an aluminum housing and a thermostat that adjusts from 0° to 100° F. Operate on 50/60 Hz. Components are UL recognized. CSA certified.

DIN rail-mount heaters have a plastic housing. 1365K1 and *K2* include a thermostat that adjusts from 32° to 140° F. Components are UL recognized. *Optional thermostat for 120/240 VAC heaters* adjusts from 32° to 140° F. It's SPST (single pole, single throw) and has two screw terminal connections.

Ceiling-Mount Radiant Heaters

Excellent for indoor spot heating, these units have an aluminum housing and nickel chromium heating element with a nickel alloy sheath. Mount using included ceiling brackets (fasteners not included). Operate on 50/60 Hz. UL listed. CSA certified.

2,000- and ***4,500-watt*** heaters have three 6″ wire leads. ***6,000-*** and ***13,500-watt*** heaters have four 6″ wire leads.

Optional safety screens prevent contact between the heating element and surrounding objects.

Optional wall-mount thermostat adjusts from 40° to 110° F. It's single pole, double throw (SPDT) and has three 6″ wire leads. Mount using the four 5/16″ dia. holes (fasteners not included). Operates on 120/277 VAC and is rated for 22 amps. UL listed. For 480 VAC heaters or heaters 6,000 watts or greater, a contactor is required between the heater and thermostat; see pages 902-904.
